

## RX111 Group

Renesas MCUs

R01DS0190EJ0060  
Rev.0.60  
Apr 15, 2013

32 MHz 32-bit RX MCUs, 50 DMIPS,  
up to 128 Kbytes of flash memory, USB 2.0 full-speed host/function/  
OTG up to 5 comms channels, 12-bit A/D, 8-bit D/A, RTC

## Features

### ■ 32-bit RX CPU core

- 32 MHz maximum operating frequency  
Capable of 49 DMIPS when operating at 32 MHz
- Accumulator handles 64-bit results (for a single instruction) from 32-bit × 32-bit operations
- Multiplication and division unit handles 32-bit × 32-bit operations (multiplication instructions take one CPU clock cycle)
- Fast interrupt
- CISC Harvard architecture with 5-stage pipeline
- Variable-length instructions, ultra-compact code
- On-chip debugging circuit

### ■ Low power consumption function

- Operation from a single 1.8 to 3.6 V supply
- Three low power consumption modes

### ■ On-chip flash memory for code, no wait states

- Operation at 32 MHz, read cycle of 31.25 ns
- No wait states for reading at full CPU speed
- 16 to 128 Kbyte capacities
- Programmable at 1.8 V
- For instructions and operands

### ■ On-chip data flash memory

- 8 Kbytes
- 1,000,000 Erase/Write cycles
- BGO (Background Operation)

### ■ On-chip SRAM, no wait states

- 8 to 16 Kbyte capacities

### ■ Data transfer controller (DTC)

- Four transfer modes
- Transfer can be set for each interrupt source.

### ■ Event link controller (ELC)

- Module operation can be initiated by event signals without going through interrupts.
- Link operation between modules is possible while the CPU is sleeping.

### ■ Reset and power supply voltage management

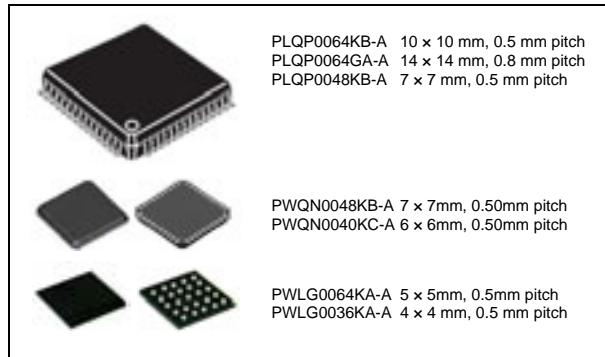

- Six types including Power-On Reset (POR)
- Low voltage detection (LVD) with voltage settings

### ■ Clock functions

- External clock input frequency: Up to 20 MHz
- Main oscillator frequency: 1 to 20 MHz
- Sub-clock oscillator frequency: 32.768 kHz
- PLL circuit input: 4 to 8 MHz
- Low-speed on-chip oscillator: 4 MHz
- High-speed on-chip oscillator: 32 MHz
- IWDT-dedicated on-chip oscillator: 15 kHz
- Generate a dedicated 32.768-kHz clock for the RTC
- On-chip clock frequency accuracy measurement circuit (CAC)

### ■ Realtime clock (RTC)

- 30-second, leap year, and error adjustment functions
- Calendar count mode or binary count mode selectable
- Capable of initiating exit from software standby mode

### ■ Independent watchdog timer (IWDT)

- 15-kHz on-chip oscillator produces a dedicated clock signal to drive IWDT operation.

### ■ On-chip functions for IEC 60730 compliance

- Clock frequency accuracy measurement circuit, IWDT, functions to assist in RAM testing, etc.

### ■ USB

- USB2.0 host (32-Kbyte or more ROM)/function/OTG (On-The-Go) (one channel)
- Full-speed = 12 Mbps, low-speed = 1.5 Mbps
- Isochronous transfer
- BC (Battery Charging)

### ■ Up to five channels for communication

- SCI: Asynchronous mode, clock synchronous mode, smart card interface (up to seven channels)
- I<sup>2</sup>C bus interface: Transfer at up to 400 kbps, capable of SMBus operation (one channel)
- RSPI (one channel)

### ■ Up to 8 extended-function timers

- 16-bit MTU: Input capture/output compare, complementary PWM output, phase counting mode (six channels)
- 16-bit CMT (two channels)

### ■ 12-bit A/D converter

- Up to 14 channels
- 1 µs minimum conversion speed
- Double trigger (data duplication) function for motor control

### ■ 8-bit D/A converter

- Two channels (for 64 pins only)

### ■ Temperature sensor

### ■ General I/O ports

- 5-V tolerant, open drain, input pull-up

### ■ Multi-function pin controller (MPC)

- Multiple I/O pins can be selected for peripheral functions.

### ■ Operating temperature range

- -40°C to +85°C
- -40°C to +105°C

## 1. Overview

### 1.1 Outline of Specifications

Table 1.1 lists the specifications, and Table 1.2 gives a comparison of the functions of the products in different packages.

Table 1.1 is for products with the greatest number of functions, so the number of peripheral modules and channels will differ in accordance with the package type. For details, see Table 1.2, Comparison of Functions for Different Packages.

**Table 1.1 Outline of Specifications (1/3)**

Classification	Module/Function	Description
CPU	CPU	<ul style="list-style-type: none"><li>• Maximum operating frequency: 32 MHz</li><li>• 32-bit RX CPU</li><li>• Minimum instruction execution time: One instruction per one clock cycle</li><li>• Address space: 4-Gbyte linear</li><li>• Register set<ul style="list-style-type: none"><li>General purpose: Sixteen 32-bit registers</li><li>Control: Eight 32-bit registers</li><li>Accumulator: One 64-bit register</li></ul></li><li>• Basic instructions: 73</li><li>• DSP instructions: 9</li><li>• Addressing modes: 10</li><li>• Data arrangement<ul style="list-style-type: none"><li>Instructions: Little endian</li><li>Data: Selectable as little endian or big endian</li></ul></li><li>• On-chip 32-bit multiplier: 32-bit × 32-bit → 64-bit</li><li>• On-chip divider: 32-bit ÷ 32-bit → 32 bits</li><li>• Barrel shifter: 32 bits</li></ul>
Memory	ROM	<ul style="list-style-type: none"><li>• Capacity: 16 K /32 K /64 K /96 K /128 Kbytes</li><li>• 32 MHz, no-wait memory access</li><li>• Programming/erasing method: Serial programming (asynchronous serial communication/USB communication), self-programming</li></ul>
	RAM	<ul style="list-style-type: none"><li>• Capacity: 8 K /10 K /16 Kbytes</li><li>• 32 MHz, no-wait memory access</li></ul>
	E2 DataFlash	<ul style="list-style-type: none"><li>• Capacity: 8 Kbytes</li><li>• Number of erase/write cycles: 1,000,000 (typ)</li></ul>
MCU operating mode		Single-chip mode
Clock	Clock generation circuit	<ul style="list-style-type: none"><li>• Main clock oscillator, sub-clock oscillator, low-speed on-chip oscillator, high-speed on-chip oscillator, IWDT-dedicated on-chip oscillator, and PLL frequency synthesizer</li><li>• Oscillation stop detection: Available</li><li>• Measurement circuit for accuracy of clock frequency (clock accuracy check: CAC)</li><li>• Independent settings for the system clock (ICLK), peripheral module clock (PCLK), and FlashIF clock (FCLK)<ul style="list-style-type: none"><li>The CPU and system sections such as other bus masters run in synchronization with the system clock (ICLK): 32 MHz (at max.)</li><li>Peripheral modules run in synchronization with the peripheral module clock (PCLK): 32 MHz (at max.)</li><li>The flash peripheral circuit runs in synchronization with the FlashIF clock (FCLK): 32 MHz (at max.)</li><li>The ICLK frequency can only be set to FCLK, PCLKB, or PCLKD multiplied by n (n: 1, 2, 4, 8, 16, 32, 64).</li></ul></li></ul>
Resets		RES# pin reset, power-on reset, voltage monitoring reset, independent watchdog timer reset, and software reset
Voltage detection	Voltage detection circuit (LVDAa)	<ul style="list-style-type: none"><li>When the voltage on VCC falls below the voltage detection level, an internal reset or internal interrupt is generated.</li><li>Voltage detection circuit 1 is capable of selecting the detection voltage from 10 levels</li><li>Voltage detection circuit 2 is capable of selecting the detection voltage from 4 levels</li></ul>
Low power consumption	Low power consumption functions	<ul style="list-style-type: none"><li>Module stop function</li><li>Three low power consumption modes<ul style="list-style-type: none"><li>Sleep mode, deep sleep mode, and software standby mode</li></ul></li></ul>
	Function for lower operating power consumption	<ul style="list-style-type: none"><li>Operating power control modes<ul style="list-style-type: none"><li>High-speed operating mode, middle-speed operating mode, and low-speed operating mode</li></ul></li></ul>
Interrupt	Interrupt controller (ICUb)	<ul style="list-style-type: none"><li>Interrupt vectors: 82</li><li>External interrupts: 9 (NMI, IRQ0 to IRQ7 pins)</li><li>Non-maskable interrupts: 4 (NMI pin, voltage monitoring 1 interrupt, voltage monitoring 2 interrupt, and IWDT interrupt)</li><li>16 levels specifiable for the order of priority</li></ul>

**Table 1.1 Outline of Specifications (2/3)**

Classification	Module/Function	Description
DMA	Data transfer controller (DTCa)	<ul style="list-style-type: none"> <li>Transfer modes: Normal transfer, repeat transfer, and block transfer</li> <li>Activation sources: Interrupts</li> <li>Chain transfer function</li> </ul>
I/O ports	General I/O ports	<ul style="list-style-type: none"> <li>64-pin /48-pin /40-pin /36-pin</li> <li>I/O: 46/30/24/20</li> <li>Input: 3/3/1/1</li> <li>Pull-up resistors: 38/24/19/16</li> <li>Open-drain outputs: 34/24/19/16</li> <li>5-V tolerance: 4/4/4/4</li> </ul>
Event link controller (ELC)		<ul style="list-style-type: none"> <li>Event signals of 35 types can be directly connected to the module</li> <li>Operations of timer modules are selectable at event input</li> <li>Capable of event link operation for port B</li> </ul>
Multi-function pin controller (MPC)		Capable of selecting the input/output function from multiple pins
Timers	Multi-function timer pulse unit 2 (MTU2a)	<ul style="list-style-type: none"> <li>(16 bits × 6 channels) × 1 unit</li> <li>Time bases for the six 16-bit timer channels can be provided via up to 16 pulse-input/output lines and three pulse-input lines</li> <li>Select from among eight or seven counter-input clock signals for each channel (PCLK/1, PCLK/4, PCLK/16, PCLK/64, PCLK/256, PCLK/1024, MTCLKA, MTCLKB, MTCLKC, MTCLKD) other than channel 5, for which only four signals are available.</li> <li>Input capture function</li> <li>21 output compare/input capture registers</li> <li>Pulse output mode</li> <li>Complementary PWM output mode</li> <li>Reset synchronous PWM mode</li> <li>Phase-counting mode</li> <li>Generation of triggers for A/D converter conversion</li> </ul>
	Port output enable 2 (POE2a)	Controls the high-impedance state of the MTU's waveform output pins
	Compare match timer (CMT)	<ul style="list-style-type: none"> <li>(16 bits × 2 channels) × 1 unit</li> <li>Select from among four clock signals (PCLK/8, PCLK/32, PCLK/128, PCLK/512)</li> </ul>
	Independent watchdog timer (IWDTa)	<ul style="list-style-type: none"> <li>14 bits × 1 channel</li> <li>Count clock: Dedicated low-speed on-chip oscillator for the IWDT</li> <li>Frequency divided by 1, 16, 32, 64, 128, or 256</li> </ul>
	Realtime clock (RTCA)	<ul style="list-style-type: none"> <li>Clock source: Sub-clock</li> <li>Calendar count mode or binary count mode selectable</li> <li>Interrupts: Alarm interrupt, periodic interrupt, and carry interrupt</li> </ul>
Communication functions	Serial communications interfaces (PCIe, SCIf)	<ul style="list-style-type: none"> <li>3 channels (channel 1, 5: PCIe, channel 12: SCIf)</li> <li>Serial communications modes: Asynchronous, clock synchronous, and smart card interface</li> <li>On-chip baud rate generator allows selection of the desired bit rate</li> <li>Choice of LSB-first or MSB-first transfer</li> <li>Enables transfer rate clock input from the MTU</li> <li>Simple I<sup>2</sup>C</li> <li>Simple SPI</li> <li>Master/slave mode supported (SCIf only)</li> <li>Start frame and information frame are included (SCIf only)</li> <li>Start-bit detection in asynchronous mode: Low level or falling edge is selectable</li> </ul>
	I <sup>2</sup> C bus interface (RIIC)	<ul style="list-style-type: none"> <li>1 channel</li> <li>Communications formats: I<sup>2</sup>C bus format/SMBus format</li> <li>Master mode or slave mode selectable</li> <li>Supports fast mode</li> </ul>
	Serial peripheral interface (RSPI)	<ul style="list-style-type: none"> <li>1 channel</li> <li>Transfer facility</li> </ul> <p>Using the MOSI (master out, slave in), MISO (master in, slave out), SSL (slave select), and RSPI clock (RSPCK) signals enables serial transfer through SPI operation (four lines) or clock-synchronous operation (three lines)</p> <ul style="list-style-type: none"> <li>Capable of handling serial transfer as a master or slave</li> <li>Data formats</li> <li>Choice of LSB-first or MSB-first transfer</li> </ul> <p>The number of bits in each transfer can be changed to 8, 9, 10, 11, 12, 13, 14, 15, 16, 20, 24, or 32 bits.</p> <p>128-bit buffers for transmission and reception</p> <p>Up to four frames can be transmitted or received in a single transfer operation (with each frame having up to 32 bits)</p> <ul style="list-style-type: none"> <li>Double buffers for both transmission and reception</li> </ul>

**Table 1.1 Outline of Specifications (3/3)**

Classification	Module/Function	Description
Communication function	USB 2.0 host/function module (USBc)	<ul style="list-style-type: none"> <li>USB Device Controller (UDC) and transceiver for USB 2.0 are incorporated.</li> <li>Host (32-Kbyte or more ROM)/function module: 1 port</li> <li>Compliant with USB version 2.0</li> <li>Transfer speed: Full-speed (12 Mbps), low-speed (1.5 Mbps)</li> <li>OTG (ON-The-Go) is supported.</li> <li>Isochronous transfer is supported.</li> <li>BC (Battery Charger) is supported.</li> </ul>
12-bit A/D converter (S12ADb)		<ul style="list-style-type: none"> <li>1 unit (1 unit × 14 channels)</li> <li>12-bit resolution</li> <li>Minimum conversion time: 1.0 <math>\mu</math>s per channel when the ADCLK is operating at 32 MHz</li> <li>Operating modes           <ul style="list-style-type: none"> <li>Scan mode (single scan mode, continuous scan mode, and group scan mode)</li> <li>Double-trigger mode (duplication of A/D conversion data)</li> </ul> </li> <li>A/D conversion start conditions           <ul style="list-style-type: none"> <li>A software trigger, a trigger from a timer (MTU), an external trigger signal, or ELC</li> </ul> </li> </ul>
Temperature sensor (TEMPSa)		<ul style="list-style-type: none"> <li>1 channel</li> <li>The voltage of the temperature is converted into a digital value by the 12-bit A/D converter.</li> </ul>
D/A converter (DA)		<ul style="list-style-type: none"> <li>2 channels</li> <li>8-bit resolution</li> <li>Output voltage: 0 V to VCC</li> </ul>
CRC calculator (CRC)		<ul style="list-style-type: none"> <li>CRC code generation for arbitrary amounts of data in 8-bit units</li> <li>Select any of three generating polynomials: <math>X^8 + X^2 + X + 1</math>, <math>X^{16} + X^{15} + X^2 + 1</math>, or <math>X^{16} + X^{12} + X^5 + 1</math></li> <li>Generation of CRC codes for use with LSB-first or MSB-first communications is selectable.</li> </ul>
Data operation circuit (DOC)		Comparison, addition, and subtraction of 16-bit data
Power supply voltages/Operating frequencies		VCC = 1.8 to 2.4 V: 8 MHz, VCC = 2.4 to 2.7 V: 16 MHz, VCC = 2.7 to 3.6 V: 32 MHz
Supply current		3.2 mA at 32 MHz (typ.)
Operating temperature range		D version: -40 to +85°C, G version: -40 to +105°C
Packages		<ul style="list-style-type: none"> <li>64-pin LFQFP (PLQP0064KB-A) 10 × 10 mm, 0.5 mm pitch</li> <li>64-pin LQFP (PLQP0064GA-A) 14 × 14 mm, 0.8 mm pitch</li> <li>48-pin LFQFP (PLQP0048KB-A) 7 × 7 mm, 0.5 mm pitch</li> <li>40-pin HWQFN (PWQN0040KC-A) 6 × 6mm, 0.50mm pitch</li> <li>36-pin WFLGA (PWLG0036KA-A) 4 × 4 mm, 0.5 mm pitch</li> <li>64-pin WFLGA (PWLG0064KA-A) 5 × 5 mm, 0.5 mm pitch</li> <li>48-pin HWQFN (PWQN0048KB-A) 7 × 7 mm, 0.5 mm pitch</li> </ul>
On-chip debugging system		E1 emulator (FINE interface)

**Table 1.2 Comparison of Functions for Different Packages**

Module/Functions		RX111 Group			
		64 Pins	48 Pins	40 Pins	36 Pins
Interrupts	External interrupts	NMI, IRQ0 to IRQ7			
DMA	Data transfer controller	Supported			
Timers	Multi-function timer pulse unit 2	6 channels (MTU0 to MTU5)			
	Port output enable 2	POE0# to POE3#, POE8#		POE0#, POE2#, POE3#, POE8#	
	Compare match timer	2 channels × 1 unit			
	Realtime clock	Supported		Not supported	
	Independent watchdog timer	Supported			
Communication functions	Serial communications interfaces [simple I <sup>2</sup> C, simple SPI]	2 channels (SCI1, SCI5)			
	Serial communications interface [simple I <sup>2</sup> C, simple SPI]	1 channel (SCI12)			
	I <sup>2</sup> C bus interface	1 channel			
	Serial peripheral interface	1 channel	1 channel (SSLA1 and SSLA3 are not supported)	1 channel (SSLA1 to SSLA3 are not supported)	
	USB 2.0 host/function module (USBC)	1 channel (Host/Function/ OTG)	1 channel (Host/Function)		
12-bit A/D converter (including high-precision channels)		14 channels (6 channels)	10 channels (4 channels)	8 channels (3 channels)	7 channels (2 channels)
D/A converter		2 channels	Not supported		
Temperature sensor		Supported			
CRC calculator		Supported			
Event link controller		Supported			
Packages		64-pin LFQFP 64-pin LQFP 64-pin WFLGA	48-pin LFQFP 48-pin HWQFN	40-pin HWQFN	36-pin WFLGA

## 1.2 List of Products

Table 1.3 is a list of products, and Figure 1.1 shows how to read the product part no., memory capacity, and package type.

**Table 1.3 List of Products (1/2)**

Group	Part No.	Orderable Part No.	Package	ROM Capacity	RAM Capacity	E2 DataFlash	Maximum Operating Frequency	Operating Temperature

### 1.3 Block Diagram

Figure 1.2 shows a block diagram of the RX111.

ICUb: Interrupt controller  
DTCa: Data transfer controller  
IWDTa: Independent watchdog timer  
ELC: Event link controller  
CRC: CRC (cyclic redundancy check) calculator  
SCle/SCIf: Serial communications interface  
RSPI: Serial peripheral interface  
RIIC: I<sup>2</sup>C bus interface

MTU2a: Multi-function timer pulse unit 2  
POE2a: Port output enable 2  
USBc: USB 2.0 host/function module  
CMT: Compare match timer  
RTCA: Realtime clock  
DOC: Data operation circuit  
CAC: Clock frequency accuracy measurement circuit

Figure 1.2 RX111 Block Diagram

## 1.4 Pin Functions

Table 1.4 lists the pin functions.

**Table 1.4 Pin Functions (1/3)**

Classifications	Pin Name	I/O	Description
Power supply	VCC	Input	Power supply pin. Connect it to the system power supply.
	VCL	—	Connect this pin to the VSS pin via the 4.7 $\mu$ F smoothing capacitor used to stabilize the internal power supply. Place the capacitor close to the pin.
	VSS	Input	Ground pin. Connect it to the system power supply (0 V).
Clock	XTAL	Output/ Input *1	Pins for connecting a crystal resonator. An external clock can be input through the XTAL pin.
	EXTAL	Input	
	XCIN	Input	Input/output pins for the sub-clock oscillator. Connect a crystal resonator between XCIN and XCOUT.
	XCOUT	Output	
Operating mode control	CLKOUT	Output	Clock output pin
	MD	Input	Pin for setting the operating mode. The signal levels on this pin must not be changed during operation.
	RES#	Input	Reset pin. This LSI enters the reset state when this signal goes low.
	CACREF	Input	Input pin for the clock frequency accuracy measurement circuit.
On-chip emulator	FINED	I/O	FINE interface pin.
LVD	CMPA2	Input	Detection target voltage pin for voltage detection 2
Interrupts	NMI	Input	Non-maskable interrupt request pin.
	IRQ0 to IRQ7	Input	Interrupt request pins.
Multi-function timer pulse unit 2	MTIOC0A, MTIOC0B	I/O	The TGRA0 to TGRD0 input capture input/output compare output/PWM output pins.
	MTIOC0C, MTIOC0D		
	MTIOC1A, MTIOC1B	I/O	The TGRA1 and TGRB1 input capture input/output compare output/PWM output pins.
	MTIOC2A, MTIOC2B	I/O	The TGRA2 and TGRB2 input capture input/output compare output/PWM output pins.
	MTIOC3A, MTIOC3B	I/O	The TGRA3 to TGRD3 input capture input/output compare output/PWM output pins.
	MTIOC3C, MTIOC3D		
	MTIOC4A, MTIOC4B	I/O	The TGRA4 to TGRD4 input capture input/output compare output/PWM output pins.
	MTIOC4C, MTIOC4D		
	MTIC5U, MTIC5V, MTIC5W	Input	The TGRU5, TGRV5, and TGRW5 input capture input/external pulse input pins.
	MTCLKA, MTCLKB, MTCLKC, MTCLKD	Input	Input pins for the external clock.
Port output enable 2	POE0# to POE3#, POE8#	Input	Input pins for request signals to place the MTU pins in the high impedance state.
Realtime clock	RTCOUT	Output	Output pin for the 1-Hz/64-Hz clock.
Serial communications interface (SClE)	• Asynchronous mode/clock synchronous mode		
	SCK1, SCK5	I/O	Input/output pins for the clock
	RXD1, RXD5	Input	Input pins for received data
	TXD1, TXD5	Output	Output pins for transmitted data
	CTS1#, CTS5#	Input	Input pins for controlling the start of transmission and reception
	RTS1#, RTS5#	Output	Output pins for controlling the start of transmission and reception
	• Simple I <sup>2</sup> C mode		
	SSCL1, SSCL5	I/O	Input/output pins for the I <sup>2</sup> C clock
	SSDA1, SSDA5	I/O	Input/output pins for the I <sup>2</sup> C data

**Table 1.4 Pin Functions (2/3)**

Classifications	Pin Name	I/O	Description
Serial communications interface (SCLe)	• Simple SPI mode		
	SCK1, SCK5	I/O	Input/output pins for the clock
	SMISO1, SMISO5	I/O	Input/output pins for slave transmit data
	SMOSI1, SMOSI5	I/O	Input/output pins for master transmit data
Serial communications interface (SCI)	SS1#, SS5#	Input	Chip-select input pins
	• Asynchronous mode/clock synchronous mode		
	SCK12	I/O	Input/output pin for the clock
	RXD12	Input	Input pin for received data
Serial communications interface (SCI)	TXD12	Output	Output pin for transmitted data
	CTS12#	Input	Input pin for controlling the start of transmission and reception
	RTS12#	Output	Output pin for controlling the start of transmission and reception
	• Simple I <sup>2</sup> C mode		
I <sup>2</sup> C bus interface	SSCL12	I/O	Input/output pin for the I <sup>2</sup> C clock
	SSDA12	I/O	Input/output pin for the I <sup>2</sup> C data
	• Simple SPI mode		
	SCK12	I/O	Input/output pin for the clock
I <sup>2</sup> C bus interface	SMISO12	I/O	Input/output pin for slave transmit data
	SMOSI12	I/O	Input/output pin for master transmit data
	SS12#	Input	Chip-select input pin
	• Extended serial mode		
I <sup>2</sup> C bus interface	RXD12	Input	Input pin for data reception by SCI
	TXD12	Output	Output pin for data transmission by SCI
	SIOX12	I/O	Input/output pin for data reception or transmission by SCI
	SCL0	I/O	Input/output pin for I <sup>2</sup> C bus interface clocks. Bus can be directly driven by the N-channel open drain output.
Serial peripheral interface	SDA0	I/O	Input/output pin for I <sup>2</sup> C bus interface data. Bus can be directly driven by the N-channel open drain output.
	RSPCKA	I/O	Clock input/output pin for the RSPI.
	MOSIA	I/O	Input or output data output from the master for the RSPI.
	MISOA	I/O	Input or output data output from the slave for the RSPI.
	SSLA0	I/O	Input/output pin to select the slave for the RSPI.
USB 2.0 host/function module	SSLA1 to SSLA3	Output	Output pins to select the slave for the RSPI.
	VCC_USB	Input	Power supply pin for USB. Connect this pin to VCC.
	VSS_USB	Input	Ground pin for USB. Connect this pin to VSS.
	USB0_DP	I/O	D+ I/O pin of the USB on-chip transceiver.
	USB0_DM	I/O	D- I/O pin of the USB on-chip transceiver.
	USB0_VBUS	Input	USB cable connection monitor pin.
	USB0_EXICEN	Output	Low-power control signal for the OTG chip.
	USB0_VBUSEN	Output	VBUS (5 V) supply enable signal for the OTG chip.
	USB0_OVRCURA, USB0_OVRCURB	Input	External overcurrent detection pins.
12-bit A/D converter	USB0_ID	Input	Mini-AB connector ID input pin during operation in OTG mode.
	AN000 to AN004, AN006, AN008 to AN015	Input	Input pins for the analog signals to be processed by the A/D converter.
D/A converter	ADTRG0#	Input	Input pin for the external trigger signals that start the A/D conversion.
	DA0, DA1	Output	Output pins for the analog signals to be processed by the D/A converter.

**Table 1.4 Pin Functions (3/3)**

Classifications	Pin Name	I/O	Description
Analog power supply	AVCC0	Input	Analog voltage supply pin for the 12-bit A/D converter. Connect this pin to VCC if the 12-bit A/D converter is not to be used.
	AVSS0	Input	Analog ground pin for the 12-bit A/D converter. Connect this pin to VSS if the 12-bit A/D converter is not to be used.
	VREFH0	Input	Analog reference voltage supply pin for the 12-bit A/D converter. Connect this pin to VCC if the 12-bit A/D converter is not to be used.
	VREFL0	Input	Analog reference ground pin for the 12-bit A/D converter. Connect this pin to VSS if the 12-bit A/D converter is not to be used.
I/O ports	P03, P05	I/O	2-bit input/output pins.
	P14 to P17	I/O	4-bit input/output pins.
	P26, P27	I/O	2-bit input/output pins.
	P30 to P32, P35	I/O	4-bit input/output pins. (P35 input pin)
	P40 to P44, P46	I/O	6-bit input/output pins.
	P54, P55	I/O	2-bit input/output pins.
	PA0, PA1, PA3, PA4, PA6	I/O	5-bit input/output pins.
	PB0, PB1, PB3, PB5 to PB7	I/O	6-bit input/output pins.
	PC0 to PC7	I/O	8-bit input/output pins.
	PE0 to PE7	I/O	8-bit input/output pins.
	PH6, PH7	Input	2-bit input pins.
	PJ6, PJ7	I/O	2-bit input/output pins.

Note 1. For external clock input.

## 1.5 Pin Assignments

Figure 1.3 to Figure 1.7 show the pin assignments. Table 1.5 to Table 1.6 show the lists of pins and pin functions.

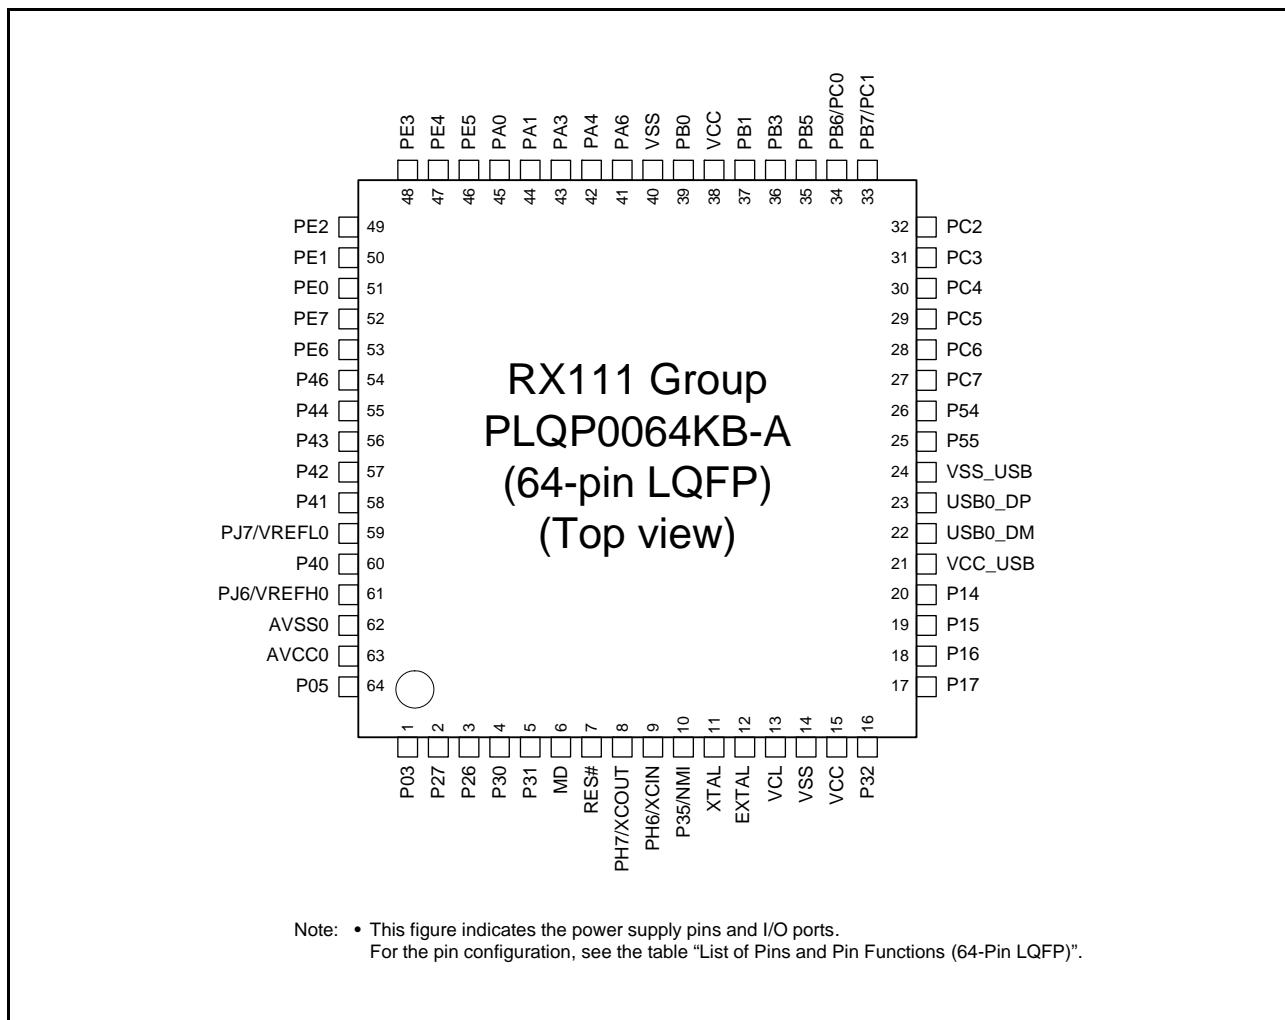

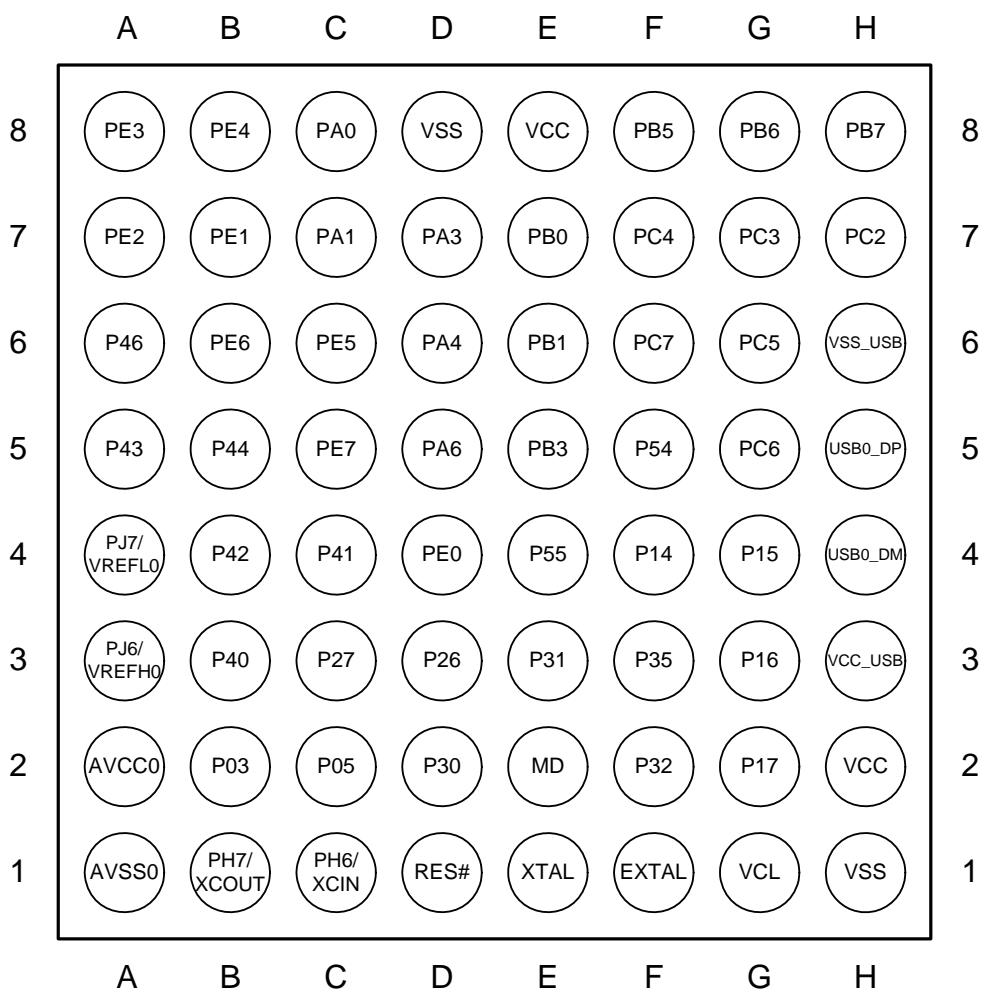

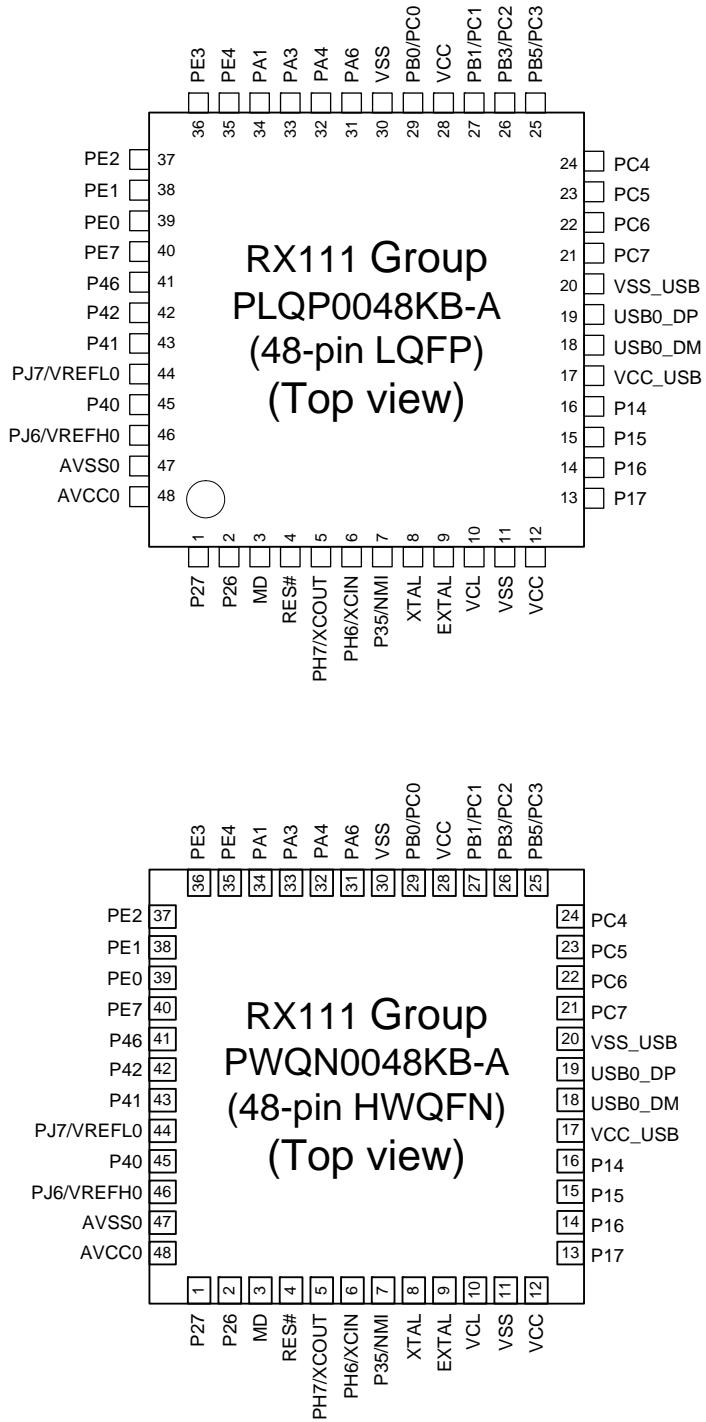

Figure 1.3 Pin Assignments of the 64-Pin LQFP

**RX111 Group**  
**PWLG0064KA-A**  
**(64-pin WFLGA)**  
**(Upper perspective view)**

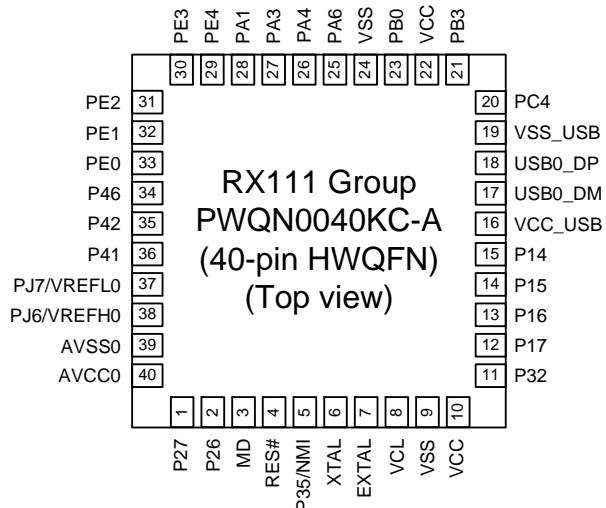

Note: • This figure indicates the power supply pins and I/O port pins. For the pin configuration, see the table "List of Pins and Pin Functions (64-Pin WFLGA)".  
• For the position of A1 pin in the package, see "Package Dimensions".

**Figure 1.4 Pin Assignments of the 64-Pin WFLGA**

Note: • This figure indicates The power supply pins and I/O port pins.  
For the pin configuration, see the table "List of Pins and Pin Functions (48-Pin LQFP/HWQFN)".

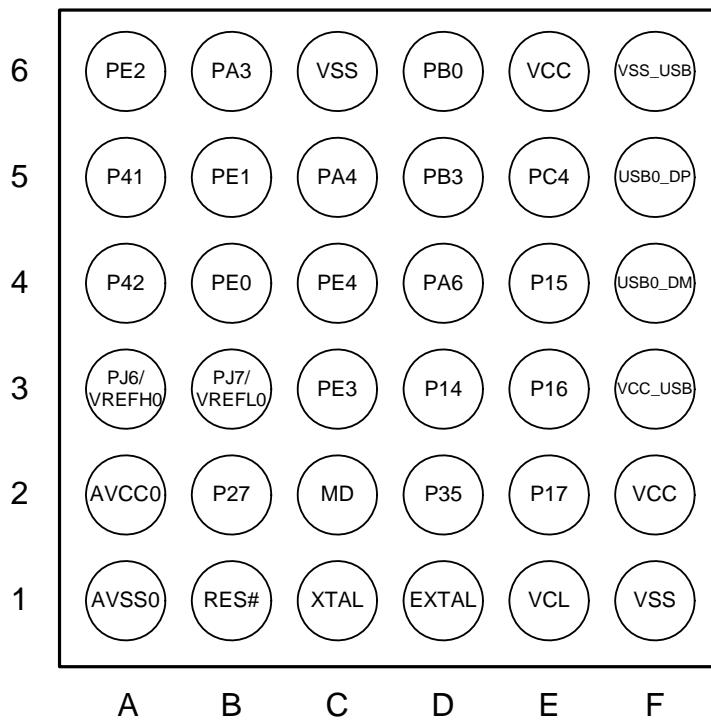

Figure 1.5 Pin Assignments of the 48-Pin LQFP/HWQFN

Note: • This figure indicates the power supply pins and I/O port pins.  
For the pin configuration, see the table "List of Pins and Pin Functions (40-Pin HWQFN)".

Figure 1.6 Pin Assignments of the 40-Pin HWQFN

## 2. CPU

Figure 2.1 shows the register set of the CPU.

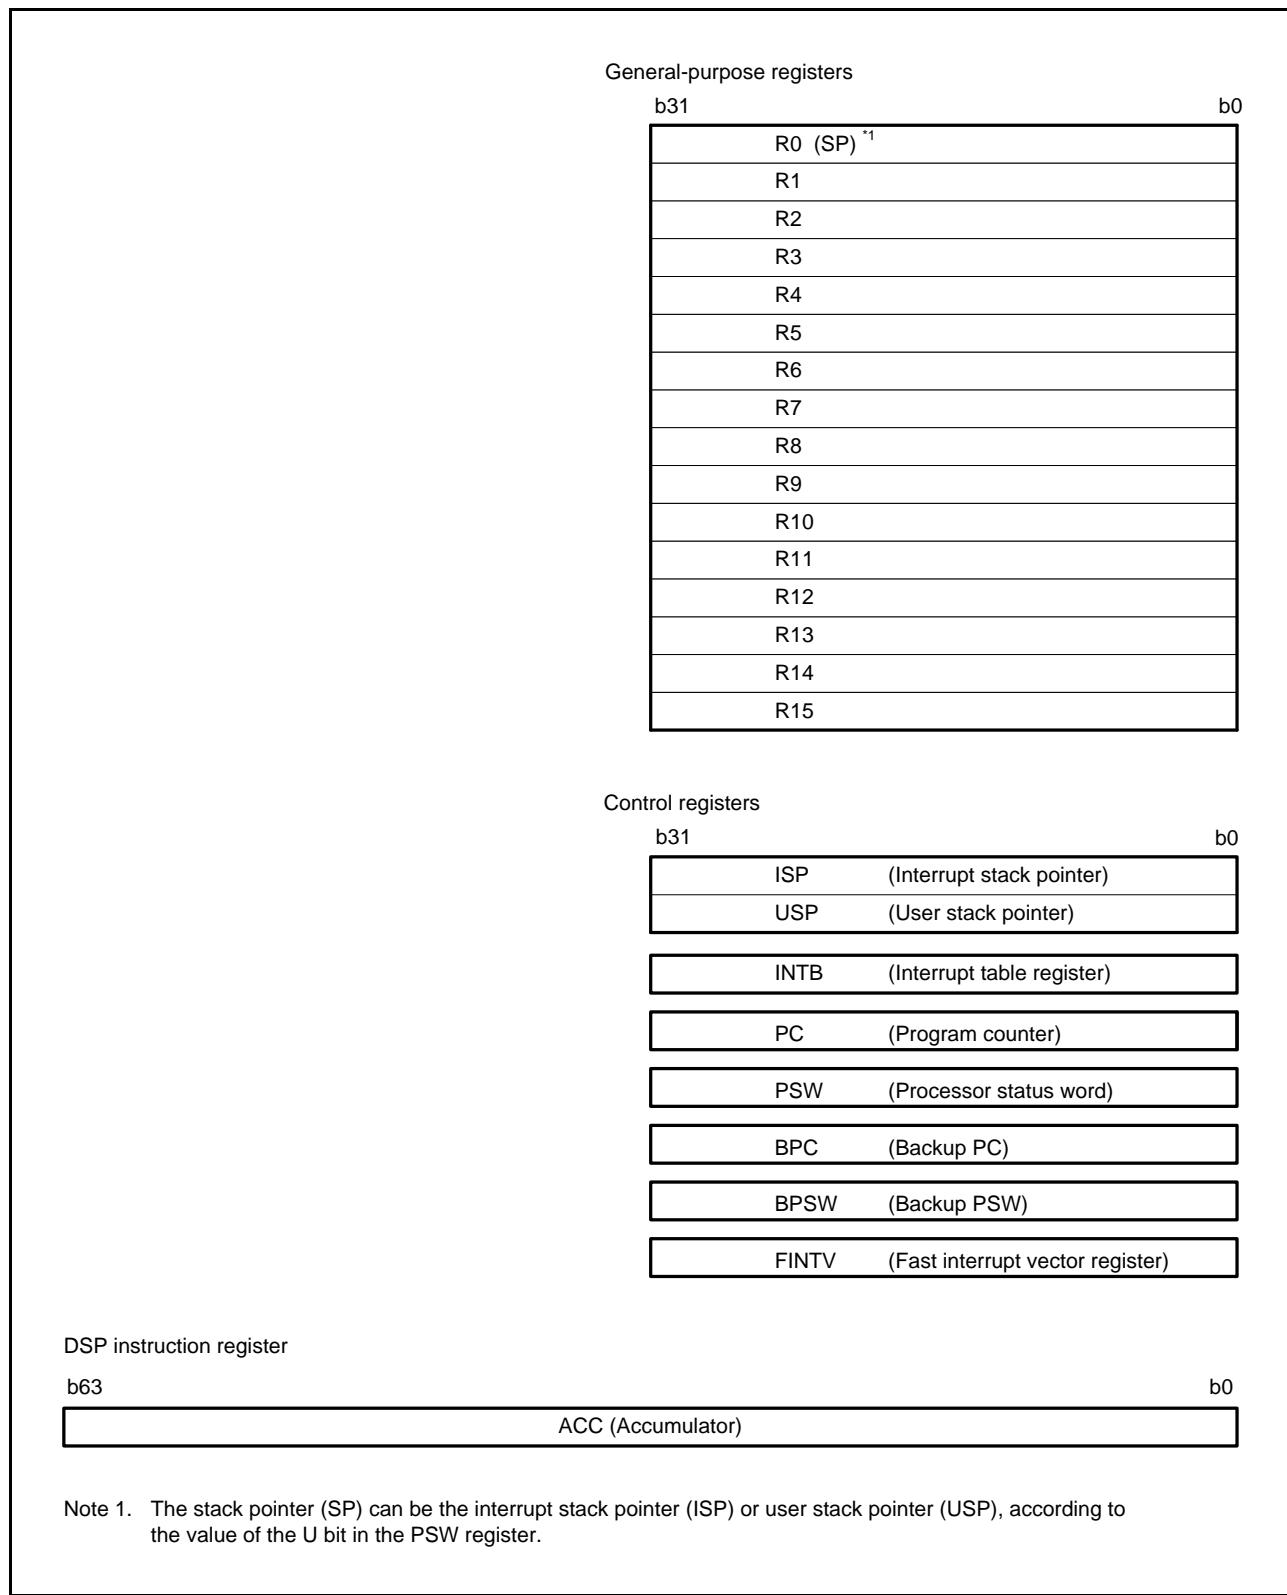

Figure 2.1 Register Set of the CPU

## 2.1 General-Purpose Registers (R0 to R15)

This CPU has 16 general-purpose registers (R0 to R15). R0 to R15 can be used as data registers or address registers. R0, a general-purpose register, also functions as the stack pointer (SP). The stack pointer is switched to operate as the interrupt stack pointer (ISP) or user stack pointer (USP) by the value of the stack pointer select bit (U) in the processor status word (PSW).

## 2.2 Control Registers

### (1) Interrupt Stack Pointer (ISP)/User Stack Pointer (USP)

The stack pointer (SP) can be either of two types, the interrupt stack pointer (ISP) or the user stack pointer (USP). Whether the stack pointer operates as the ISP or USP depends on the value of the stack pointer select bit (U) in the processor status word (PSW).

Set the ISP or USP to a multiple of 4, as this reduces the numbers of cycles required to execute interrupt sequences and instructions entailing stack manipulation.

### (2) Interrupt Table Register (INTB)

The interrupt table register (INTB) specifies the address where the relocatable vector table starts.

### (3) Program Counter (PC)

The program counter (PC) indicates the address of the instruction being executed.

### (4) Processor Status Word (PSW)

The processor status word (PSW) indicates the results of instruction execution or the state of the CPU.

### (5) Backup PC (BPC)

The backup PC (BPC) is provided to speed up response to interrupts.

After a fast interrupt has been generated, the contents of the program counter (PC) are saved in the BPC register.

### (6) Backup PSW (BPSW)

The backup PSW (BPSW) is provided to speed up response to interrupts.

After a fast interrupt has been generated, the contents of the processor status word (PSW) are saved in the BPSW. The allocation of bits in the BPSW corresponds to that in the PSW.

### (7) Fast Interrupt Vector Register (FINTV)

The fast interrupt vector register (FINTV) is provided to speed up response to interrupts.

The FINTV register specifies a branch destination address when a fast interrupt has been generated.

## 2.3 Register Associated with DSP Instructions

### (1) Accumulator (ACC)

The accumulator (ACC) is a 64-bit register used for DSP instructions. The accumulator is also used for the multiply and multiply-and-accumulate instructions; EMUL, EMULU, MUL, and RMPA, in which case the prior value in the accumulator is modified by execution of the instruction.

Use the MVTACHI and MVTACLO instructions for writing to the accumulator. The MVTACHI and MVTACLO instructions write data to the higher-order 32 bits (bits 63 to 32) and the lower-order 32 bits (bits 31 to 0), respectively.

Use the MVFACHI and MVFACMI instructions for reading data from the accumulator. The MVFACHI and MVFACMI instructions read data from the higher-order 32 bits (bits 63 to 32) and the middle 32 bits (bits 47 to 16), respectively.

## 3. Address Space

### 3.1 Address Space

This LSI has a 4-Gbyte address space, consisting of the range of addresses from 0000 0000h to FFFF FFFFh. That is, linear access to an address space of up to 4 Gbytes is possible, and this contains both program and data areas.

Figure 3.1 shows the memory map.

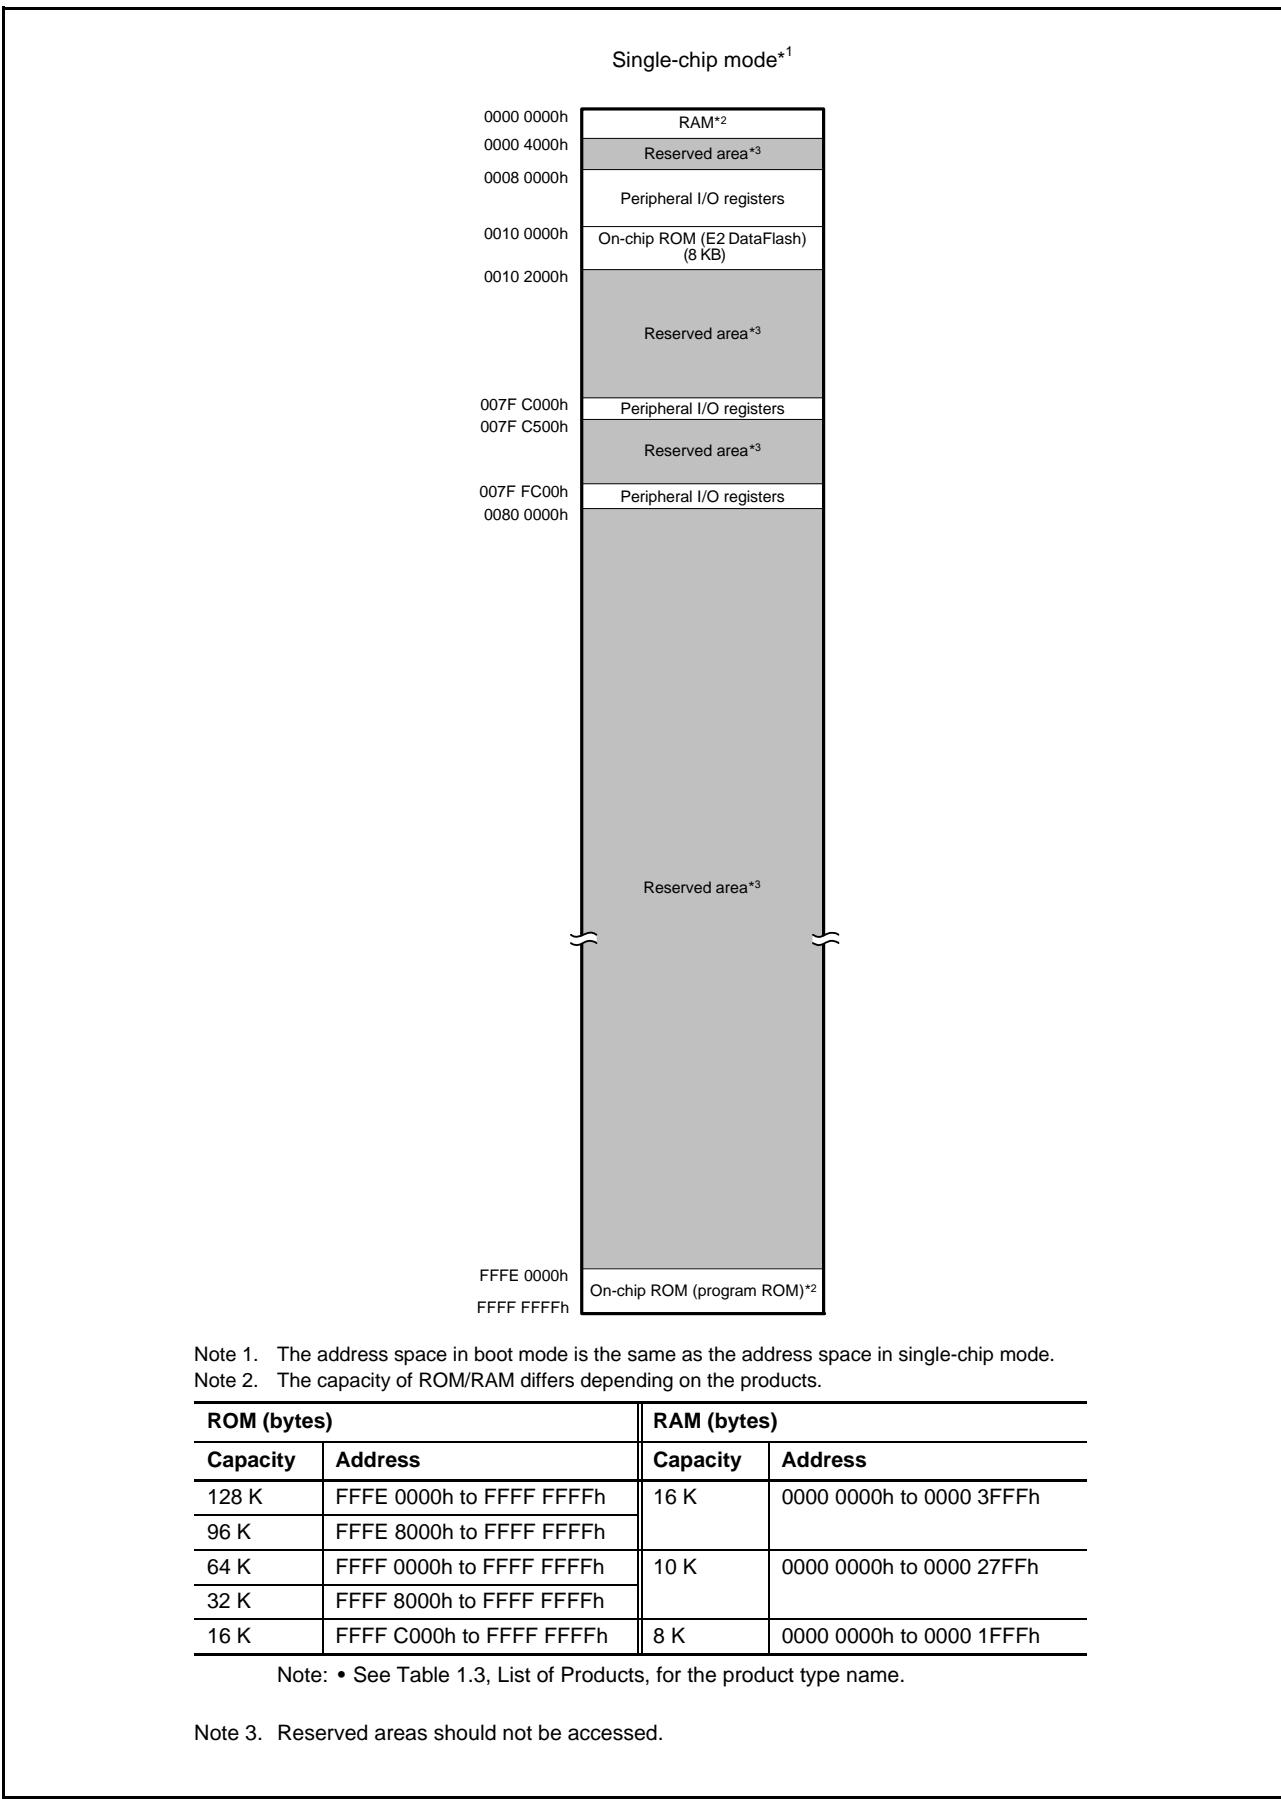

Figure 3.1 Memory Map

## 4. I/O Registers

This section provides information on the on-chip I/O register addresses and bit configuration. The information is given as shown below. Notes on writing to I/O registers are also given below.

### (1) I/O register addresses (address order)

- Registers are listed from the lower allocation addresses.
- Registers are classified according to module symbols.
- Numbers of cycles for access indicate numbers of cycles of the given base clock.
- Among the internal I/O register area, addresses not listed in the list of registers are reserved. Reserved addresses must not be accessed. Do not access these addresses; otherwise, the operation when accessing these bits and subsequent operations cannot be guaranteed.

### (2) Notes on writing to I/O registers

While writing to an I/O register, the CPU starts executing subsequent instructions before the I/O register write access is completed. This may cause the subsequent instructions to be executed before the write value is reflected in the operation. The examples below show how subsequent instructions must be executed after a write access to an I/O register is completed.

#### [Examples of cases requiring special care]

- The subsequent instruction must be executed while an interrupt request is disabled with the IENj bit in IERn of the ICU (interrupt request enable bit) cleared to 0.
- A WAIT instruction is executed immediately after the preprocessing for causing a transition to the low power consumption state.

In the above cases, after writing to an I/O register, wait until the write operation is completed using the following procedure and then execute the subsequent instruction.

- Write to an I/O register.
- Read the value in the I/O register and write it to a general register.
- Execute the operation using the value read.
- Execute the subsequent instruction.

Example of instructions

- Byte-size I/O registers

```
MOV.L #SFR_ADDR, R1  
MOV.B #SFR_DATA, [R1]  
CMP [R1].UB, R1  
;; Next process
```

- Word-size I/O registers

```
MOV.L #SFR_ADDR, R1  
MOV.W #SFR_DATA, [R1]  
CMP [R1].W, R1  
;; Next process
```

- Longword-size I/O registers

```
MOV.L #SFR_ADDR, R1
MOV.L #SFR_DATA, [R1]
CMP [R1].L, R1
;; Next process
```

When executing an instruction after writing to multiple registers, only read the last I/O register written to and execute the instruction using that value; it is not necessary to execute the instruction using the values written to all the registers.

### (3) Number of cycles necessary for accessing I/O registers

See Table 4.1 for details on the number of clock cycles necessary for accessing I/O registers.

The number of access cycles to I/O registers is obtained by following equation.\*1

$$\begin{aligned}\text{Number of access cycles to I/O registers} = & \text{Number of bus cycles for internal main bus 1} + \\ & \text{Number of divided clock synchronization cycles} + \\ & \text{Number of bus cycles for internal peripheral buses 1 to 6}\end{aligned}$$

The number of bus cycles of internal peripheral buses 1 to 6 differs according to the register to be accessed.

When peripheral functions connected to internal peripheral buses 2 to 6 or registers for the external bus control unit (except for bus error related registers) are accessed, the number of divided clock synchronization cycles is added.

The number of divided clock synchronization cycles differs depending on the frequency ratio between ICLK and PCLK (or FCLK) or bus access timing.

In the peripheral function unit, when the frequency ratio of ICLK is equal to or greater than that of PCLK (or FCLK), the sum of the number of bus cycles for internal main bus 1 and the number of the divided clock synchronization cycles will be one cycle of PCLK (or FCLK) at a maximum. Therefore, one PCLK (or FCLK) has been added to the number of access cycles shown in Table 4.1.

When the frequency ratio of ICLK is lower than that of PCLK (or FCLK), the subsequent bus access is started from the ICLK cycle following the completion of the access to the peripheral functions. Therefore, the access cycles are described on an ICLK basis.

Note 1. This applies to the number of cycles when the access from the CPU does not conflict with the instruction fetching to the external memory or bus access from the different bus master (DTC).

### (4) Notes on sleep mode and mode transitions

During sleep mode or mode transitions, do not write to the system control related registers (indicated by ‘SYSTEM’ in the Module Symbol column in Table 4.1, List of I/O Registers (Address Order)).

## 4.1 I/O Register Addresses (Address Order)

## NOTES FOR CMOS DEVICES

- (1) VOLTAGE APPLICATION WAVEFORM AT INPUT PIN: Waveform distortion due to input noise or a reflected wave may cause malfunction. If the input of the CMOS device stays in the area between VIL (MAX) and VIH (MIN) due to noise, etc., the device may malfunction. Take care to prevent chattering noise from entering the device when the input level is fixed, and also in the transition period when the input level passes through the area between VIL (MAX) and VIH (MIN).
- (2) HANDLING OF UNUSED INPUT PINS: Unconnected CMOS device inputs can be cause of malfunction. If an input pin is unconnected, it is possible that an internal input level may be generated due to noise, etc., causing malfunction. CMOS devices behave differently than Bipolar or NMOS devices. Input levels of CMOS devices must be fixed high or low by using pull-up or pull-down circuitry. Each unused pin should be connected to VDD or GND via a resistor if there is a possibility that it will be an output pin. All handling related to unused pins must be judged separately for each device and according to related specifications governing the device.
- (3) PRECAUTION AGAINST ESD: A strong electric field, when exposed to a MOS device, can cause destruction of the gate oxide and ultimately degrade the device operation. Steps must be taken to stop generation of static electricity as much as possible, and quickly dissipate it when it has occurred. Environmental control must be adequate. When it is dry, a humidifier should be used. It is recommended to avoid using insulators that easily build up static electricity. Semiconductor devices must be stored and transported in an anti-static container, static shielding bag or conductive material. All test and measurement tools including work benches and floors should be grounded. The operator should be grounded using a wrist strap. Semiconductor devices must not be touched with bare hands. Similar precautions need to be taken for PW boards with mounted semiconductor devices.
- (4) STATUS BEFORE INITIALIZATION: Power-on does not necessarily define the initial status of a MOS device. Immediately after the power source is turned ON, devices with reset functions have not yet been initialized. Hence, power-on does not guarantee output pin levels, I/O settings or contents of registers. A device is not initialized until the reset signal is received. A reset operation must be executed immediately after power-on for devices with reset functions.
- (5) POWER ON/OFF SEQUENCE: In the case of a device that uses different power supplies for the internal operation and external interface, as a rule, switch on the external power supply after switching on the internal power supply. When switching the power supply off, as a rule, switch off the external power supply and then the internal power supply. Use of the reverse power on/off sequences may result in the application of an overvoltage to the internal elements of the device, causing malfunction and degradation of internal elements due to the passage of an abnormal current. The correct power on/off sequence must be judged separately for each device and according to related specifications governing the device.
- (6) INPUT OF SIGNAL DURING POWER OFF STATE : Do not input signals or an I/O pull-up power supply while the device is not powered. The current injection that results from input of such a signal or I/O pull-up power supply may cause malfunction and the abnormal current that passes in the device at this time may cause degradation of internal elements. Input of signals during the power off state must be judged separately for each device and according to related specifications governing the device.

## General Precautions in the Handling of MPU/MCU Products

The following usage notes are applicable to all MPU/MCU products from Renesas. For detailed usage notes on the products covered by this manual, refer to the relevant sections of the manual. If the descriptions under General Precautions in the Handling of MPU/MCU Products and in the body of the manual differ from each other, the description in the body of the manual takes precedence.

### 1. Handling of Unused Pins

Handle unused pins in accord with the directions given under Handling of Unused Pins in the manual.

- The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible. Unused pins should be handled as described under Handling of Unused Pins in the manual.

### 2. Processing at Power-on

The state of the product is undefined at the moment when power is supplied.

- The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the moment when power is supplied.

In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the moment when power is supplied until the reset process is completed.

In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the moment when power is supplied until the power reaches the level at which resetting has been specified.

### 3. Prohibition of Access to Reserved Addresses

Access to reserved addresses is prohibited.

- The reserved addresses are provided for the possible future expansion of functions. Do not access these addresses; the correct operation of LSI is not guaranteed if they are accessed.

### 4. Clock Signals

After applying a reset, only release the reset line after the operating clock signal has become stable. When switching the clock signal during program execution, wait until the target clock signal has stabilized.

- When the clock signal is generated with an external resonator (or from an external oscillator) during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Moreover, when switching to a clock signal produced with an external resonator (or by an external oscillator) while program execution is in progress, wait until the target clock signal is stable.

### 5. Differences between Products

Before changing from one product to another, i.e. to one with a different part number, confirm that the change will not lead to problems.

- The characteristics of MPU/MCU in the same group but having different part numbers may differ because of the differences in internal memory capacity and layout pattern. When changing to products of different part numbers, implement a system-evaluation test for each of the products.

## Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
3. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from such alteration, modification, copy or otherwise misappropriation of Renesas Electronics product.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.  
"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots etc.  
"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; and safety equipment etc.  
Renesas Electronics products are neither intended nor authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems, surgical implants etc.), or may cause serious property damages (nuclear reactor control systems, military equipment etc.). You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application for which it is not intended. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for which the product is not intended by Renesas Electronics.
6. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You should not use Renesas Electronics products or technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. When exporting the Renesas Electronics products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, who distributes, disposes of, or otherwise places the product with a third party, to notify such third party in advance of the contents and conditions set forth in this document. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties as a result of unauthorized use of Renesas Electronics products.
11. This document may not be reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
