SIERRA
WIRELESS®

4117701
3.0
March 03, 2016

Important Notice

Due to the nature of wireless communications, transmission and reception of data can never be guaranteed. Data may be delayed, corrupted (i.e., have errors) or be totally lost. Although significant delays or losses of data are rare when wireless devices such as the Sierra Wireless modem are used in a normal manner with a well-constructed network, the Sierra Wireless modem should not be used in situations where failure to transmit or receive data could result in damage of any kind to the user or any other party, including but not limited to personal injury, death, or loss of property. Sierra Wireless accepts no responsibility for damages of any kind resulting from delays or errors in data transmitted or received using the Sierra Wireless modem, or for failure of the Sierra Wireless modem to transmit or receive such data.

Safety and Hazards

Do not operate the Sierra Wireless modem in areas where cellular modems are not advised without proper device certifications. These areas include environments where cellular radio can interfere such as explosive atmospheres, medical equipment, or any other equipment which may be susceptible to any form of radio interference. The Sierra Wireless modem can transmit signals that could interfere with this equipment. Do not operate the Sierra Wireless modem in any aircraft, whether the aircraft is on the ground or in flight. In aircraft, the Sierra Wireless modem **MUST BE POWERED OFF**. When operating, the Sierra Wireless modem can transmit signals that could interfere with various onboard systems.

Note: Some airlines may permit the use of cellular phones while the aircraft is on the ground and the door is open. Sierra Wireless modems may be used at this time.

The driver or operator of any vehicle should not operate the Sierra Wireless modem while in control of a vehicle. Doing so will detract from the driver or operator's control and operation of that vehicle. In some states and provinces, operating such communications devices while in control of a vehicle is an offence.

Limitations of Liability

This manual is provided "as is". Sierra Wireless makes no warranties of any kind, either expressed or implied, including any implied warranties of merchantability, fitness for a particular purpose, or noninfringement. The recipient of the manual shall endorse all risks arising from its use.

The information in this manual is subject to change without notice and does not represent a commitment on the part of Sierra Wireless. SIERRA WIRELESS AND ITS AFFILIATES SPECIFICALLY DISCLAIM LIABILITY FOR ANY AND ALL DIRECT, INDIRECT, SPECIAL, GENERAL, INCIDENTAL, CONSEQUENTIAL, PUNITIVE OR EXEMPLARY DAMAGES INCLUDING, BUT NOT LIMITED TO, LOSS OF PROFITS OR REVENUE OR ANTICIPATED PROFITS OR REVENUE ARISING OUT OF THE USE OR INABILITY TO USE ANY SIERRA WIRELESS PRODUCT, EVEN IF SIERRA WIRELESS AND/OR ITS AFFILIATES HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES OR THEY ARE FORESEEABLE OR FOR CLAIMS BY ANY THIRD PARTY.

Notwithstanding the foregoing, in no event shall Sierra Wireless and/or its affiliates aggregate liability arising under or in connection with the Sierra Wireless product, regardless of the number of events, occurrences, or claims giving rise to liability, be in excess of the price paid by the purchaser for the Sierra Wireless product.

Customer understands that Sierra Wireless is not providing cellular or GPS (including A-GPS) services. These services are provided by a third party and should be purchased directly by the Customer.

SPECIFIC DISCLAIMERS OF LIABILITY: CUSTOMER RECOGNIZES AND ACKNOWLEDGES SIERRA WIRELESS IS NOT RESPONSIBLE FOR AND SHALL NOT BE HELD LIABLE FOR ANY DEFECT OR DEFICIENCY OF ANY KIND OF CELLULAR OR GPS (INCLUDING A-GPS) SERVICES.

Patents

This product may contain technology developed by or for Sierra Wireless Inc.

This product includes technology licensed from QUALCOMM®.

This product is manufactured or sold by Sierra Wireless Inc. or its affiliates under one or more patents licensed from InterDigital Group and MMP Portfolio Licensing.

1. Introduction

The HL6528RDx series of embedded modules were created to improve, expand and enhance the design of the existing HL6528x.

This document defines the high level product features and illustrates the interfaces for the AirPrime HL6528RDx, and covers the hardware aspects of the product series, including electrical and mechanical.

Redesigned variants covered in this document are:

- HL6528RD
- HL6528RD-G
- HL6528RD-2.8V
- HL6528RD-G2.8V

The AirPrime HL6528RD and HL6528RD-G modules are 1.8V IO modules as defined in section 2 Pad Definition. 2.8V IO variants are also available, and defined throughout this document as HL6528RD-2.8V and HL6528RD-G2.8V. HL6528RDx denotes applicability to all four variants.

The AirPrime HL6528RDx belongs to the AirPrime HL Series from Essential Connectivity Module family. This is an industrial-grade quad-band GSM/GPRS Embedded Wireless Module, designed for the automotive market and any other market with similar quality and life-time support requirements. The following table enumerates the frequencies supported by the HL6528RDx module.

Table 1. Supported Frequencies

RF Band	Transmit band (Tx)	Receive band (Rx)	Maximum Output Power
GSM 850	824 to 849 MHz	869 to 894 MHz	2 Watts GSM and GPRS
E-GSM 900	880 to 915 MHz	925 to 960 MHz	2 Watts GSM and GPRS
DCS 1800	1710 to 1785 MHz	1805 to 1880 MHz	1 Watt GSM and GPRS
PCS 1900	1850 to 1910 MHz	1930 to 1990 MHz	1 Watt GSM and GPRS

This module supports a large variety of interfaces such as Analog and Digital Audio, as well as Dual UIM Single Standby to provide customers with the highest level of flexibility in implementing high-end solutions. In addition, both AirPrime HL6528RD-G and HL6528RD-G2.8V modules also embed a high-performance GNSS receiver.

1.1. Common Flexible Form Factor (CF³)

The AirPrime HL6528RDx module belongs to the Common Flexible Form Factor (CF³) family of modules. This family consists of a series of WWAN modules that share the same mechanical dimensions (same width and length with varying thicknesses) and footprint. The CF³ form factor provides a unique solution to a series of problems faced commonly in the WWAN module space as it:

- Accommodates multiple radio technologies (from 2G to LTE advanced) and band groupings
- Supports bit-pipe (Essential Module Series) and value add (Smart Module Series) solutions
- Offers electrical and functional compatibility
- Provides Direct Mount as well as Socketability depending on customer needs

1.2. Physical Dimensions

The AirPrime HL6528RDx modules are compact, robust, fully shielded modules with the following dimensions:

- Length: 23 mm
- Width: 22 mm
- Thickness: 2.50 mm (including the label)
- Weight : 2.25g (TBC)

Note: Dimensions specified above are typical values.

1.3. General Features

The table below summarizes the AirPrime HL6528RDx module features.

Table 2. AirPrime HL6528RDx Features

Feature	Description
GSM Output Power	<ul style="list-style-type: none"> • Class 4 (2 W) for GSM 850 and E-GSM 900 • Class 1 (1 W) for DCS 1800 and PCS 1900
GPRS	<ul style="list-style-type: none"> • Quad-band GSM 850/E-GSM 900/DCS 1800/PCS 1900 • GPRS Multi-slot class 10 • R99 support • PBCCH support • Coding schemes: CS1 to CS4
Audio Interface	<ul style="list-style-type: none"> • Analog and Digital interfaces • Supports Full Rate (FR), Enhanced Full Rate (EFR), Half Rate (HR) and Adaptive Multi Rate (AMR) • Noise reduction and echo cancellation • DTMF generation
UIM Interface	<ul style="list-style-type: none"> • Dual UIM Single Standby support • 1.8V/3.0V support • Supports UIM application tool kit with proactive UIM commands
Application Interface	<ul style="list-style-type: none"> • Full set of AT commands for GSM/GPRS including GSM 07.07 and 07.05 AT command sets • Comprehensive set of dedicated AT commands for M2M applications
SMS	<ul style="list-style-type: none"> • SMS class 0,1 and 2 • SMS MT, MO • SMS storage into UIM card or Flash memory • Concatenation of MT SMS
Supplementary Services	<ul style="list-style-type: none"> • Call Forwarding • Call Barring • Multiparty Service • Call Waiting • Call Hold • USSD • Automatic answer

Feature	Description
RTC	Real Time Clock (RTC) with calendar and alarm
Temperature Sensor	<ul style="list-style-type: none"> Temperature monitoring Alarms

1.4. GNSS Features

The table below summarizes the GNSS capabilities of the AirPrime HL6528RD-G and HL6528RD-G2.8V modules.

Table 3. GNSS Capabilities

Feature	Description
GPS	L1 band (CDMA 1575.42 MHz)
GLONASS	L1 Band (FDMA 1602MHz)
SBAS (TBC)	WAAS, EGNOS, MSAS, GAGAN, QZSS
Channels	52
Antenna	Passive or active antenna support
Assistance data	Server-generated Extended Ephemeris

1.5. Architecture

The figure below presents an overview of the AirPrime HL6528RDx module internal architecture and external interfaces.

Note: Dotted parts are only supported on the AirPrime HL6528RD-G and HL6528RD-G2.8V.

* For more information regarding voltage values, refer to section 3.7 Electrical Information for Digital I/O

Figure 1. AirPrime HL6528RDx Architecture Overview

1.6. Interfaces

The AirPrime HL6528RD and HL6528RD-2.8V modules provide the following interfaces and peripheral connectivity:

- 1x – Backup Battery Interface
- 1x – 1.8V/3V UIM
- 1x – USB 1.1
- 8x – GPIOs, 3 of which have multiplexes
- 1x – 8-wire UART
- 1x – Active Low PWR_ON_N
- 1x – Active Low RESET_IN_N
- 2x – ADC
- 2x – System Clock Out
- 1x – Analog Audio Interface (Differential input/output)
- 1x – Digital Audio
- 1x – I²C
- 1x – Debug Interface
- 1x – JTAG Interface
- 1x – GSM Antenna
- 1x – 2G TX Burst Indicator

In addition to the interfaces above, the AirPrime HL6528RD-G and HL6528RD-G2.8V modules also provide the following interfaces and peripheral connectivity:

- GPS Antenna
- External LNA Enable/Disable
- Pulse Per Second

1.7. Connection Interface

The AirPrime HL6528RDx module is an LGA form factor device. All electrical and mechanical connections are made through the 146 pads Land Grid Array (LGA) on the bottom side PCB.

Figure 2. AirPrime HL6528RDx Module Mechanical Overview

The 146 pads have the following distribution

- 66 inner signal pads, 1x0.5mm, pitch 0.8mm
- 1 reference test point (Ground), 1.0mm diameter

- 7 test point (JTAG), 0.8mm diameter, 1.20mm pitch
- 64 inner ground pads, 1.0x1.0mm, pitch 1.825mm/1.475mm
- 4 inner corner ground pads, 1x1mm
- 4 outer corner ground pads, 1x0.9mm

1.8. ESD

Refer to the following table for ESD Specifications.

Note: Information specified in the following table is preliminary and subject to change.

Table 4. ESD Specifications

Category	Connection	Specification
Operational	RF ports	IEC-61000-4-2 — Level (Electrostatic Discharge Immunity Test) ESD protection is highly recommended at the point where the antenna (main and GPS) contacts are exposed.
Non-operational	Host connector interface	Unless otherwise specified: <ul style="list-style-type: none"> • JESD22-A114 +/- 1500V Human Body Model • JESD22-A115 +/- 150V Machine Model • JESD22-C101C +/- 500V Charged Device Model
Signals	SIM connector	ESD protection is highly recommended at the point where the USIM contacts are exposed, and for any other signals that would be subjected to ESD by the user.
	Other host signals	

1.9. Environmental and Certifications

1.9.1. Environmental Specifications

The environmental specification for both operating and storage conditions are defined in the table below.

Table 5. AirPrime HL6528RDx Module Environmental Specifications

Conditions	Range
Operating Class A	-30°C to +70°C
Operating Class B	-40°C to +85°C
Storage	-40°C to +90°C

Class A is defined as the operating temperature ranges that the device:

- Shall exhibit normal function during and after environmental exposure.
- Shall meet the minimum requirements of 3GPP or appropriate wireless standards.

Class B is defined as the operating temperature ranges that the device:

- Shall remain fully functional during and after environmental exposure
- Shall exhibit the ability to establish a voice, SMS or DATA call (emergency call) at all times even when one or more environmental constraint exceeds the specified tolerance.
- Unless otherwise stated, full performance should return to normal after the excessive constraint(s) have been removed.

1.9.2. Regulatory

The AirPrime HL6528RDx module is compliant with the following regulations: R&TTE directive, FCC, IC, ANATEL and NCC.

1.9.3. RoHS Directive Compliant

The AirPrime HL6528RDx module is compliant with RoHS Directive 2011/65/EU which sets limits for the use of certain restricted hazardous substances. This directive states that “from 1st July 2006, new electrical and electronic equipment put on the market does not contain lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE)”.

1.9.4. Disposing of the Product

This electronic product is subject to the EU Directive 2012/19/EU for Waste Electrical and Electronic Equipment (WEEE). As such, this product must not be disposed of at a municipal waste collection point. Please refer to local regulations for directions on how to dispose of this product in an environmental friendly manner.

>> 2. Pad Definition

AirPrime HL6528RDx module pads are divided into 3 functional categories.

- **Core functions and associated pads** cover all the mandatory features for M2M connectivity and will be available on all modules. These Core functions are always available and always at the same physical pad locations. A custom function and associated pads is guaranteed to be forward and/or backward compatible with the next generation of CF³.
- **Extension functions and associated pads** bring additional capabilities to the customer. Whenever an Extension function is always at the same pad location.
- **Custom functions and associated pads** are specific to a given module, and make an opportunistic use of space. Custom features should be used with caution as there is no guarantee that the custom functions available on one module are available on other CF³ modules.

Other pads marked as “not connected” or “reserved” should not be used.

Table 6. Pad Description

Pad #	Signal Name	Function	I/O	Active Low / High	IO Voltage Domain for HL6528RD and HL6528RD-G	IO Voltage Domain for HL6528RD-2.8V and HL6528RD-G2.8V	Reset State**
1	GPIO1 / I2C1_CLK	General purpose input/output / I ² C serial clock line	I/O		1.8V	2.8V	I, PU

Figure 3. Pad Configuration

3. Detailed Interface Specifications

Note: If not specified, all electrical values are given for VBATT=3.7V and an operating temperature of 25°C.

If needed, the AirPrime HL6528RDx module can support two different voltages for VBATT and VBATT_PA power inputs. However, using the same power supply for both signals is recommended.

3.1. Power Supply

The AirPrime HL6528RDx module is supplied through the VBATT signal with the following characteristics.

Table 7. Power Supply

	Minimum	Typical	Maximum
VBATT voltage (V)	3.35 ¹	3.7	4.3
VBATT_PA voltage (V) Full Specification	3.35 ¹	3.7	4.3
VBATT_PA voltage (V) Extended Range ²	2.8 ²	3.7	4.3

1 This value has to be guaranteed during the burst

2 No guarantee of 3GPP performances over extended range

3.2. Current Consumption

The following table lists the current consumption of the AirPrime HL6528RDx module at different conditions.

Note: Typical values are defined for VBATT/VBATT_PA at 3.7V and 25°C, for 50Ω impedance at all RF ports. Maximum values are provided for VSWR 3:1 with worst conditions among supported ranges of voltage and temperature.

Table 8. Current Consumption

Parameters		Typical	Maximum
Off mode (HL6528RD and HL6528RD-2.8V) (μA)		200	260
Off mode (HL6528RD-G and HL6528RD-G2.8V) (μA)		200	260
GSM Sleep mode (average, mA) Single UIM operation	DRX2	1.8	2.9
	DRX5	1.4	2.5
	DRX9	1.3	2.4
GSM in communication mode (average, mA)	E-GSM 900 / GSM 850 (PCL=5)	220	243
	DCS 1800 / PCS 1900 (PCL=0)	150	164
GPRS (2 TX, 3 RX) (average, mA)	E-GSM 900 / GSM 850 (PCL=5)	330	377
	DCS 1800 / PCS 1900 (PCL=0)	230	251
Peak Current consumption (peak, A)	E-GSM 900 / GSM 850	1.5	1.6
	DCS 1800 / PCS 1900	0.9	1.2

Parameters		Typical	Maximum
GNSS Acquisition ¹ (average, mA) GSM registered on network	Max value ³	TBD	TBD
	Min value ⁴	TBD	TBD
GNSS Acquisition ¹ (average, mA) GSM in Flight mode	Max value ³	TBD	TBD
	Min value ⁴	TBD	TBD
GNSS Navigation (1Hz) ¹ (average, mA) GSM registered on network	Max value ³	TBD	TBD
	Min value ⁴	TBD	TBD
GNSS Navigation (1Hz) ¹ (average, mA) GSM in Flight mode	Max value ³	TBD	TBD
	Min value ⁴	TBD	TBD
GNSS Hibernate mode ² (average, mA) GSM registered on network	Max value ³	TBD	TBD
	Min value ⁴	TBD	TBD

1 Maximum SVs in view, signal level @-130dBm, high gain configuration

2 Hot start conditions are maintained in Hibernate mode

3 Baseband is running (or no sleep mode allowed) in max value condition. Refer to document [2] AirPrime HL6528RDx AT Commands Interface Guide for sleep mode description.

4 Baseband is in sleep mode in min value condition. Refer to document [2] AirPrime HL6528RDx AT Commands Interface Guide for sleep mode description.

Table 9. Current Consumption per Power Supply (VBATT / VBATT_PA)

Parameters		Typical	Maximum	
VBATT_PA	Peak current (A) GPRS communication mode, 2TX	E-GSM 900 / GSM 850 (PCL=5)	TBD	TBD
		DCS 1800/ PCS 1900 (PCL=0)	TBD	TBD
	Peak current (A) GSM communication mode, 1TX	E-GSM 900 / GSM 850 (PCL=5)	TBD	TBD

	Average current (mA) GSM communication mode, 1TX GNSS Navigation mode	E-GSM 900 / GSM 850 (PCL=5)	TBD	TBD
		DCS 1800/ PCS 1900 (PCL=0)	TBD	TBD

3.3. VGPIO

The VGPIO output can be used to:

- Pull-up signals such as I/Os
- Supply the digital transistors driving LEDs

The VGPIO output is available when the AirPrime HL6528RDx module is switched ON.

Caution: *VGPIO is only on when RESET_IN_N and PWR_ON_N are both at low level.*

Table 10. VGPIO Electrical Characteristics

Parameter	HL6528RD, HL6528RD-G			HL6528RD-2.8V, HL6528RD-G2.8V			Remarks
	Min	Typ	Max	Min	Typ	Max	
Voltage level (V)	1.70	1.80	1.90	2.7	2.80	2.95	Both active mode and sleep mode
Current capability active mode (mA)	-	-	50	-	-	50	
Current capability sleep mode (mA)	-	-	3 (TBC)	-	-	3 (TBC)	
Line regulation (mV/V)	-	-	50 (TBC)	-	-	50 (TBC)	Iout = MAX
Rise Time(ns)	-	-	6 (TBC)	-	-	6 (TBC)	Test load capacitor = 30 pF

3.4. BAT_RTC

The AirPrime HL6528RDx module provides an input/output to connect a Real Time Clock power supply.

This pad is used as a back-up power supply for the internal Real Time Clock. The RTC is supported when VBATT is available but a back-up power supply is needed to save date and hour when VBATT is switched off.

If VBATT is available, the back-up battery can be charged by the internal 2.8 V power supply regulator.

Table 11. BAT_RTC Electrical Characteristics

Parameter	Minimum	Typical	Maximum
Input voltage (V)	2.0	2.8	3.15
Input current consumption (μ A)	-	2.5	56
Output voltage (V)	2.82	2.8	3.18
Max charging current (@VBATT=3.6V) (mA)	-	0.6	-

Note: If unused, it is recommended to add a common 10 μ F capacitor to BAT_RTC.

3.5. UIM Interface

The AirPrime HL6528RDx has one physical UIM interface which has optional support for dual UIM application with an external UIM switch.

The UIM interface allows control of a 1.8V/3V UIM and is fully compliant with GSM 11.11 recommendations related to UIM functions.

The five signals used by the UIM interface are as follows:

- UIM1_VCC: power supply
- UIM1_CLK: clock
- UIM1_DATA: I/O port
- UIM1_RESET: reset
- UIM1_DET: UIM detection (optional)

Table 12. Electrical Characteristics of UIM1

Parameter	Min	Typ	Max	Remarks
UIM1 Interface Voltage (V) (VCC, CLK, DATA, RESET)	2.7	3.0	3.15	The appropriate output voltage is auto detected and selected by software
	1.65	1.80	1.95	
UIM1_VCC Current (mA)	-	-	10	Max output current in sleep mode = 3 mA
UIM1_VCC Line Regulation (mV/V)	-	-	50	At Iout_Max
UIM1_VCC Power-up Setting Time (μ s) from power down	-	10	-	
Logic 1 of UIM1_DET (V)	2.4	-	-	For HL6528RD-2.8V and HL6528RD-G2.8V
	1.4	-	-	For HL6528RD and HL6528RD-G
Logic 0 of UIM1_DET (V)	-	-	0.4	For HL6528RD-2.8V and HL6528RD-G2.8V
	-	-	0.4	For HL6528RD and HL6528RD-G

Figure 4. UIM Implementation Example

3.5.1. UIM1_DET

UIM1_DET is used to detect and notify the application about the insertion and removal of a UIM device in the UIM socket connected to the UIM interface. When a UIM is inserted, the state of UIM1_DET transitions from logic 0 to logic 1. Inversely, when a UIM is removed, the state of UIM1_DET transitions from logic 1 to logic 0.

The GPIO used for UIM1_DET is GPIO3.

3.6. USB Interface

The AirPrime HL6528RDx has one USB interface.

USB_VBUS is used for USB connection detection purposes. For details, refer to document [2] AirPrime HL6528RDx AT Commands Interface Guide.

Table 13. USB Pad Description

Pad #	Signal Name	I/O	Function
12	USB_D-	I/O	USB data negative
13	USB_D+	I/O	USB data position
16	USB_VBUS	I	USB VBUS

Table 14. USB_VBUS Electrical Characteristics

Parameter	Minimum	Typical	Maximum	Unit
Input voltage	4.75	5.0	5.25	V
Input current consumption	-	1	-	mA

3.7. Electrical Information for Digital I/O

The AirPrime HL6528RDx supports four groups of digital interfaces with varying current drain limits.

Table 15 Digital I/O Electrical Characteristics – Input/Output Voltage provides the input and output voltage values of the digital interfaces, while the succeeding tables provides the input and output current per digital IO group. Digital IO groups are as follows:

- Group 1:
 - GPIO2
 - GPIO6
 - GPIO7
 - GPIO8
 - PPS
 - EXT_LNA_EN
- Group 2:
 - UART1
- Group 3:
 - GPIO3
 - GPIO4
 - I²C
- Group 4:
 - PCM
 - DEBUG_TX

Table 15. Digital I/O Electrical Characteristics – Input/Output Voltage

Parameter	HL6528RD, HL6528RD-G			HL6528RD-2.8V, HL6528RD-G2.8V		
	Min	Typ	Max	Min	Typ	Max
Input Voltage-High (V)	1.6		2.1	2.6		3.1
Input Voltage-Low (V)			0.15			0.15
Output Voltage-High (V)	1.206		2.1	1.87		3.1
Output Voltage-Low (V)			0.4			0.4

Table 16. Digital I/O Electrical Characteristics – Group 1 Input/Output Current

Parameter	HL6528RD, HL6528RD-G			HL6528RD-2.8V, HL6528RD-G2.8V			Notes
	Min	Typ	Max	Min	Typ	Max	
Input Current-High(μA)	-22.5		12.5	-2			Current consumption
Input Current-Low(μA)	-82.5		-6.1			2	Current consumption
DC Output Current-High (mA)			16			0.02	
DC Output Current-Low (mA)	-16			-1			

Table 17. Digital I/O Electrical Characteristics – Group 2 Input/Output Current

Parameter	HL6528RD, HL6528RD-G			HL6528RD-2.8V, HL6528RD-G2.8V			Notes
	Min	Typ	Max	Min	Typ	Max	
Input Current-High(μ A)	-22.5		12.5	-22.5		12.5	Current consumption
Input Current-Low(μ A)	-82.5		-6.1	-82.5		-6.1	Current consumption
DC Output Current-High (mA)			1.5			16	
DC Output Current-Low (mA)	-1.5			-16			

Table 18. Digital I/O Electrical Characteristics – Group 3 Input/Output Current

Parameter	HL6528RD, HL6528RD-G			HL6528RD-2.8V, HL6528RD-G2.8V			Notes
	Min	Typ	Max	Min	Typ	Max	
Input Current-High(μ A)	-2			-22.5		12.5	Current consumption
Input Current-Low(μ A)			2	-82.5		-6.1	Current consumption
DC Output Current-High (mA)			0.02			16	
DC Output Current-Low (mA)	-1			-16			

Table 19. Digital I/O Electrical Characteristics – Group 4 Input/Output Current

Parameter	HL6528RD, HL6528RD-G			HL6528RD-2.8V, HL6528RD-G2.8V			Notes
	Min	Typ	Max	Min	Typ	Max	
Input Current-High(μ A)	-22.5		12.5	-22.5		12.5	Current consumption
Input Current-Low(μ A)	-82.5		-6.1	-82.5		-6.1	Current consumption
DC Output Current-High (mA)			16			16	
DC Output Current-Low (mA)	-16			-16			

Note: The PCM interface only supports 2.8V even with 1.8V configuration.

3.8. General Purpose Input/Output (GPIO)

The AirPrime HL6528RDx provides 8 GPIOs, 3 of which has multiplexes.

Table 20. GPIO Pad Description

Pad #	Signal Name	Multiplex	I/O	Power Supply Domain	
				HL6528RD, HL6528RD-G	HL6528RD-2.8V, HL6528RD-G2.8V
1	GPIO1	I2C1_CLK1	I/O	1.8V	2.8V
10	GPIO2		I/O	1.8V	2.8V
40	GPIO7		I/O	1.8V	2.8V
41	GPIO8		I/O	1.8V	2.8V

Pad #	Signal Name	Multiplex	I/O	Power Supply Domain	
				HL6528RD, HL6528RD-G	HL6528RD-2.8V, HL6528RD-G2.8V
46	GPIO6		I/O	1.8V	2.8V
64	GPIO3	UIM1_DET	I/O	1.8V	2.8V
65	GPIO4		I/O	1.8V	2.8V
66	GPIO5	I2C1_DATA	I/O	1.8V	2.8V

3.9. Main Serial Link (UART1)

The main serial link (UART1) is used for communication between the AirPrime HL6528RDx module and a PC or host processor. It consists of a flexible 8-wire serial interface that complies with RS-232 interface.

The supported baud rates of the UART1 are 1200, 2400, 4800, 9600, 19200, 38400, 57600 and 115200 bit/s, with autobauding and up to 1Mbit/s at maximum baud rate.

The signals used by UART1 are as follows:

- TX data (UART1_TX)
- RX data (UART1_RX)
- Request To Send (UART1_RTS)
- Clear To Send (UART1_CTS)
- Data Terminal Ready (UART1_DTR)
- Data Set Ready (UART1_DSR)
- Data Carrier Detect (UART1_DCD)
- Ring Indicator (UART1_RI)

Note: The capacitive load at UART1_CTS and UART1_RX must be lower than 45pF on the HL6528RD and HL6528RD-G (1.8V configuration).

A UART transceiver or uni-directional level shifter is needed for connection to the host when the interface level is not compatible with the HL6528RDx.

UART1 pad description is summarized below.

Table 21. UART1 Pad Description

Pad #	Signal Name*	I/O*	Description
2	UART1_RI	O	Signal incoming calls (voice and data), SMS, etc.
3	UART1_RTS	I	Wakes the module up when KSLEEP=1 is used
4	UART1_CTS	O	AirPrime HL6528RDx is ready to receive AT commands
5	UART1_TX	I	Transmit data
6	UART1_RX	O	Receive data
7	UART1_DTR	I (active low)	Prevents the AirPrime HL6528RDx from entering sleep mode, switches between data mode and command mode, and wakes the module up.
8	UART1_DCD	O	Signal data connection in progress
9	UART1_DSR	O	Signal UART interface is ON

* From module side

3.9.1. 8-wire Application

Figure 5. 8-wire UART Application Example

3.9.2. 4-wire Application

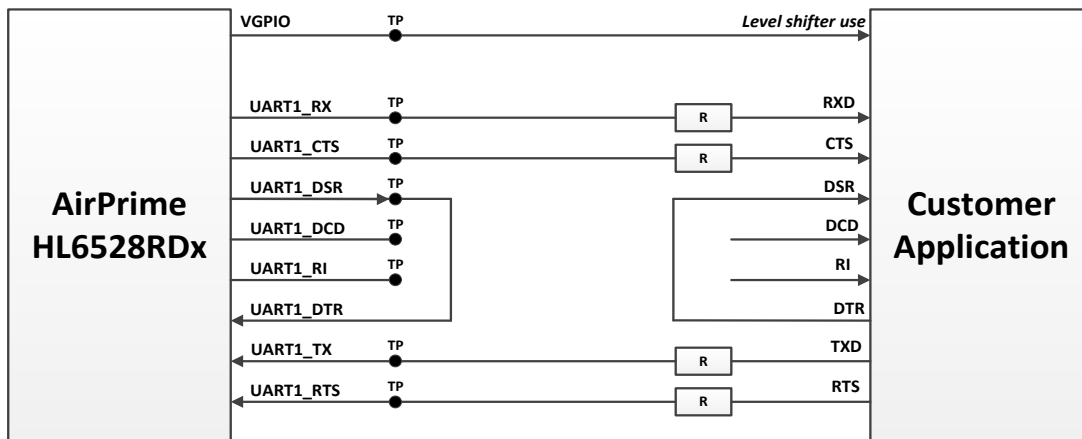

Figure 6. 4-wire UART Application Example

3.9.3. 2-wire Application

Figure 7. 2-wire UART Application Example

3.10. Power On Signal (PWR_ON_N)

A low level signal has to be provided to switch the AirPrime HL6528RDx module ON.

It is internally connected to the permanent 3.0V supply regulator inside the HL6528RDx via a pull-up resistor. Once VBATT is supplied to the HL6528RDx module, this 3.0V supply regulator will be enabled and so PWR_ON_N signal is by default at high level.

The PWR_ON_N signal's characteristics are listed in the table below.

Table 22. PWR_ON_N Electrical Characteristics

Parameter	Minimum	Typical	Maximum
Input Voltage-Low (V)	0	-	0.4
Input Voltage-High (V)	2.4 (TBC)	-	3.15
Power-up period (ms) from PWR_ON_N falling edge	2000	-	-

Note: As PWR_ON_N is internally pulled up (typically by 100kΩ), a simple open collector or open drain transistor must be used for ignition. For convenience, PWR_ON_N can be connected to GND to automatically switch the module on when power is supplied.

Figure 8. PWR_ON_N Connection Example with Switch

Figure 9. PWR_ON_N Connection Example with an Open Collector Transistor

VGPI0 is an output from the module that can be used to check if the module is active.

- When VGPI0 = 0V the module is OFF.
- When VGPI0 = 2.8V or 1.8V the module is ON (it can be in Idle, Communication or Sleep mode)

Caution: VGPI0 is always on when PWR_ON_N is at low level even during module reset.

Note: PWR_ON_N cannot be used to power the module off. The module is powered off with AT command **AT+PSCPOE**, and the PWR_ON_N signal will be internally pulled up to high level after.

3.11. Reset Signal (RESET_IN_N)

To reset the module, the RESET_IN_N pad must be tied low for at least 10ms (with PWR_ON_N at low level). This action will immediately restart the AirPrime HL6528RDx module. It is therefore not necessary to perform a new ignition sequence (PWR_ON_N) afterwards.

As RESET_IN_N is internally pulled up (typically by 100kΩ), a simple open collector or open drain transistor can be used to control it.

The RESET_IN_N signal will reset the registers of the CPU and reset the RAM memory as well.

Note: As RESET_IN_N is referenced to the 1.8V domain (internally pulled up to the module) it is impossible to enable a reset before the module is on or to try to use the RESET_IN_N as a way to power on the module.

Caution: The module will be off if PWR_ON_N is high and RESET_IN_N is tied to low.

Table 23. RESET_IN_N Electrical Characteristics

Parameter	Minimum	Typical	Maximum
Input Voltage-Low (V)	-0.2	-	0.4
Input Voltage-High (V)	1.4	-	2.2
Power up Period (ms) from RESET_IN_N falling edge	38	-	-

3.12. ADC

Two Analog to Digital Converter inputs, ADC0 and ADC1, are provided by the AirPrime HL6528RDx module. These converters are 10-bit resolution ADCs ranging from 0 to 2.8 V.

Typically, the ADCx input can be used to monitor external temperature. This is very useful for monitoring the application temperature and can be used as an indicator to safely power OFF the application in case of overheating (for Li-Ion batteries).

Both ADCs have the characteristics listed in the table below.

Table 24. ADC Electrical Characteristics

Parameter	Minimum	Typical	Maximum	Remarks
ADC Resolution (bits)	-	10	-	
Input Voltage Range (V)	0	-	2.8	General purpose input
Update rate per channel (kHz)	-	-	100	
Differential Nonlinearity (bits)	-1	-	+1	
Integral Nonlinearity (bits)	-1	-	+1	LSB
Offset Error (mV)	-10	-	+10	
Gain Error (mV/LSB)	-	1	-	
Input Resistance (MΩ)	-	1	-	
Input Capacitance (pF)	-	-	4	

3.13. Clock Interface

The AirPrime HL6528RDx supports two digital clock interfaces.

Table 25. Clock Interface Pad Description

Pad #	Signal Name	I/O	I/O Type	Description
22	26M_CLKOUT	O	1.2V	26MHz System Clock Output
23	32K_CLKOUT	O	2.8V	32.768kHz System Clock Output

3.14. Analog Audio Interfaces

The AirPrime HL6528RDx module supports one differential microphone input and one differential speaker output. It also includes a noise suppression and echo cancellation feature for enhanced voice call quality.

3.14.1. Analog Audio Input

The microphone input can either have a single-ended or a differential connection. However, performance with common mode noise and TDMA noise varies depending on the connection mode and PCB layout.

When connecting a microphone to the AirPrime HL6528RDx module, ensure to have a very good ground plane, very good filtering as well as shielding in order to avoid any disturbance on the audio path.

The gain of the microphone input can be tuned using AT commands.

The AirPrime HL6528RDx module microphone pads already include suitable biasing for an electret microphone. The electret microphone can then be connected directly on the inputs for easy connection.

AC coupling is also already embedded in the HL6528RDx embedded module.

Figure 10. MIC Input Diagram

Table 26. Analog Audio Differential Interface Input

Parameter	Minimum	Typical	Maximum	Test Conditions
MIC_P DC Biasing (V)		2.2		Through internal 2.5k Ω
MIC_N DC Biasing (V)		0		Through internal 2.5k Ω
Maximum input range (Vrms)		0.74		Gain = 0dB
Nominal reference level (mVrms)		16		Gain = + 34dB
Input Micro amplifier gain (dB)	-6		+ 50	

Note: It is recommended to add ESD protection to the microphone when it is exposed to the external environment. The ESD protection should be connected between the audio lines and a good ground, and placed as close to the microphone as possible.

3.14.2. Analog Audio Output

Table 27. Analog Audio Differential Interface Output

Parameter	Min	Typ	Max	Test Conditions
Maximum output range (Vrms)		1.75		Load=32 Ω , THD=1%
Load resistance (Ω)		32		
Output amplifier gain (dB)	-28	-	8	

Note: It is recommended to add ESD protection to the speaker when it is exposed to the external environment. The ESD protection should be connected between the audio lines and a good ground, and placed as close to the speaker as possible.

It's important to select an appropriate speaker. The following table enumerates the recommended speaker characteristics.

Table 28. Recommended Speaker Characteristics

Characteristic	Value
Input power: rated / max	0.1W (Rate)
Audio chain impedance	32 Ω +/- 10% at 1V 1KHz
Frequency Range	300 Hz ~ 4.0 KHz
Sensitivity (S.P.L)	>105 dB at 1KHz with IEC318 coupler
Distortion	5% max at 1K Hz, nominal input power

3.15. PCM

The Digital Audio Interface (PCM) allows connectivity with standard audio peripherals. It can be used, for example, to connect an external audio codec.

The signals used by the Digital Audio Interface are as follows:

- PCM_SYNC: The frame synchronization signal delivers an 8kHz frequency pulse that synchronizes the frame "data in" and the frame "data out" (short frame synchronization only).
- PCM_CLK: The frame bit clock signal controls data transfer with the audio peripheral.

- PCM_OUT: The frame “data out” relies on the selected configuration mode.
- PCM_IN: The frame “data in” relies on the selected configuration mode.

The PCM interface is a high speed full duplex interface that can be used to send and receive digital audio data to external audio ICs. The digital audio interface also features the following:

- PCM master mode
- 8 bits or 16 bits data word length
- MSB or LSB first
- Rising or falling sampling clock edge
- The programmability of this interface allows addressing a large range of audio peripheral

*Note: The PCM bit clock rate **must** be set to 1MHz in order to accommodate the 8kS/s source/sink mechanism on the DSP side, as well as the 125µs frame length.*

Refer to the following table for the electrical characteristics of the digital audio interface.

Table 29. Digital Audio Interface Electrical Characteristics

Signal	Description	Minimum	Typical	Maximum
Tsync_low + Tsync_high	PCM-SYNC period (µs)		125	
Tsync_low	PCM-SYNC low time (µs)		124	
Tsync_high	PCM-SYNC high time (µs)		1	
TSYNC-CLK	PCM-SYNC to PCM-CLK time (ns)		651	
TCLK-cycle	PCM-CLK period (ns)		1302	
TIN-setup	PCM-IN setup time (ns)	50		
TIN-hold	PCM-IN hold time (ns)	50		
TOUT-delay	PCM-OUT delay time (ns)			20
TSYNC-delay	PCM-SYNC output delay (ns)	-11		9

The following figure shows the PCM timing waveform.

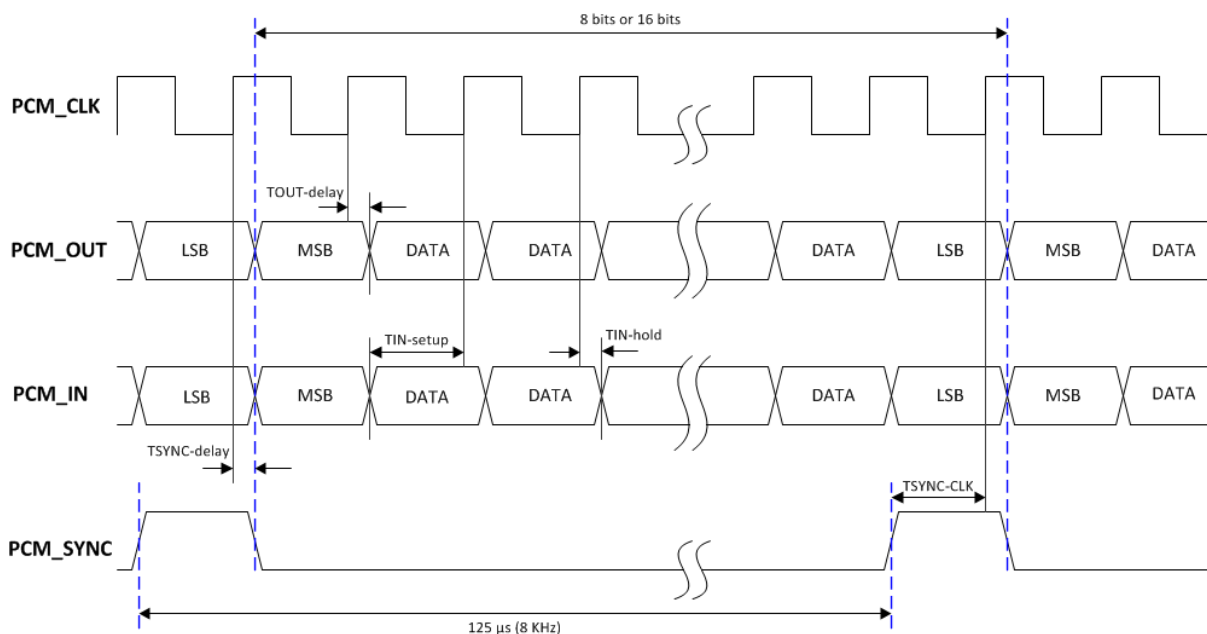

Figure 11. PCM Timing Waveform

3.16. I²C Interface

NMEA frames can be output from the UART or through a dedicated serial port (I²C).

Table 30. I²C Pad Description

Pad #	Name	Function
1	I2C1_CLK	I ² C Serial Clock Line
66	I2C1_DATA	I ² C Serial Data Line

Note: I²C pads are multiplexed with GPIO features and are internally pulled up to VGPI0 with 4.7kΩ.

The main characteristics of the I²C interface are as follows:

- Master mode (I2C1_CLK is an output of the AirPrime HL6528RDx module)
- I²C clock is set at 400KHz

As the HL6528RDx's I²C interface works in master mode only, devices connected to the I²C bus shall be slave devices, and in order for the HL6528RDx module to communicate with slave devices, the slave device's 7-bit address should be loaded inside the HL6528RDx module before activating the GPS NMEA output. For more information on managing slave devices, refer to document [2] AirPrime HL6528RDx AT Commands Interface Guide.

3.17. Debug Interfaces

The AirPrime HL6528RDx module provides two interfaces for a powerful debug system.

3.17.1. Debug Port

The AirPrime HL6528RDx provides a 2-wire debug port interface, providing real-time instruction and data trace of the modem core.

Table 31. SW Trace Pad Description

Pad #	Signal Name*	I/O*	Function
44	DEBUG_TX	O	Debug transmit data
51	DEBUG_RX	I	Debug receive data

* According to module view.

3.17.2. JTAG

The JTAG interface provides debug access to the core of the AirPrime HL6528RDx module. These JTAG signals are accessible through solderable Test Points.

Table 32. JTAG Pad Description

Pad #	Name	Function
47	TP1	Test Point 1
52	Reserved	JTAG configuration
53	Reserved	JTAG configuration
236	JTAG_RESET	JTAG RESET
237	JTAG_TCK	JTAG Test Clock
238	JTAG_TDO	JTAG Test Data Output
239	JTAG_TMS	JTAG Test Mode Select
240	JTAG_TRST	JTAG Test Reset
241	JTAG_TDI	JTAG Test Data Input
242	JTAG_RTCK	JTAG Returned Test Clock

Note: It's recommended to provide access through Test Points to the JTAG interface pads (for failure analysis and HL6528RDx debugging). All signals listed in the table above shall be outputs on the customer board to allow JTAG debugging.

3.18. PPS (HL6528RD-G and HL6528RD-G2.8V only)

The PPS signal is an output pulse related to GPS receiver time.

Table 33. PPS Electrical Characteristics

Parameter		Minimum	Typical	Maximum	Conditions
Voltage Level (V)	HL6528RD-G	1.70	1.80	1.90	
	HL6528RD-G2.8V	2.7	2.8	2.95	
Frequency (Hz)			1		
Pulse width (ms)			250		
Synchronization to GPS time (μ s)				1	

Note: This output is available only when GNSS is in navigation mode.

3.19. EXT_LNA_GPS_EN (HL6528RD-G and HL6528RD-G2.8V only)

EXT_LNA_GPS_EN ON indicates whether the GNSS receiver is active and can be used to enable an external LNA (or active antenna).

Table 34. EXT_LNA_GPS_EN Electrical Characteristics

Parameter		Minimum	Typical	Maximum	Conditions
Output Voltage Level (V)	HL6528RD-G	1.70	1.80	1.90	
	HL6528RD-G2.8V	2.7	2.8	2.95	
Output Current (mA)	HL6528RD-G	0	-	1.5	
	HL6528RD-G2.8V	0	-	2	

3.20. RF Interface

The GSM RF interface of the AirPrime HL6528RDx module allows the transmission of RF signals. This interface has a 50Ω nominal impedance.

3.20.1. RF Connection

A short 50Ω (with maximum VSWR 1.1:1, and 0.5dB loss) RF track is recommended to connect to standard RF connectors such as SMA, UFL, etc. for antenna connection.

Table 35. RF Connection

RF Signal	Impedance	VSWR Rx (max)	VSWR Tx (max)
RF_MAIN	50Ω	3:1	3:1

3.20.2. RF Performances

RF performances are compliant with the ETSI recommendation GSM 05.05.

Table 36. RF Performance

Frequency Band	Typical Sensitivity (dBm)
GSM 850	-109
E-GSM 900	-109
DCS 1800	-108
PCS 1900	-108

3.20.3. TX Burst Indicator (2G_TX_ON)

The AirPrime HL6528RDx module provides a signal, 2G_TX_ON, for TX burst indication. 2G_TX_ON is a 2.8V signal and its status depends on the module transmitter state.

Refer to the following table for the status of the 2G_TX_ON signal depending on the embedded module's state.

Table 37. Burst Indicator States

Embedded Module State	2G_TX_ON
During TX burst	High
No TX	Low

During TX burst, there is a higher current drain from the VBATT_PA power supply which causes a voltage drop. This voltage drop from VBATT_PA is a good indication of a high current drain situation during TX burst.

The blinking frequency is about 217Hz.

The output logic high duration, $T_{duration}$, depends on the number of TX slots and is computed as follows:

$$T_{duration} = T_{advance} + (0.577ms \times \text{number of TX slots}) + T_{delay}$$

Table 38. TX Burst Characteristics

Parameter	Minimum	Typical	Maximum
High level output voltage (V)	2.7	2.85	3
Low level output voltage	0		0.1
Tadvance (µs)	30	240	
Tdelay (µs)	0	30	

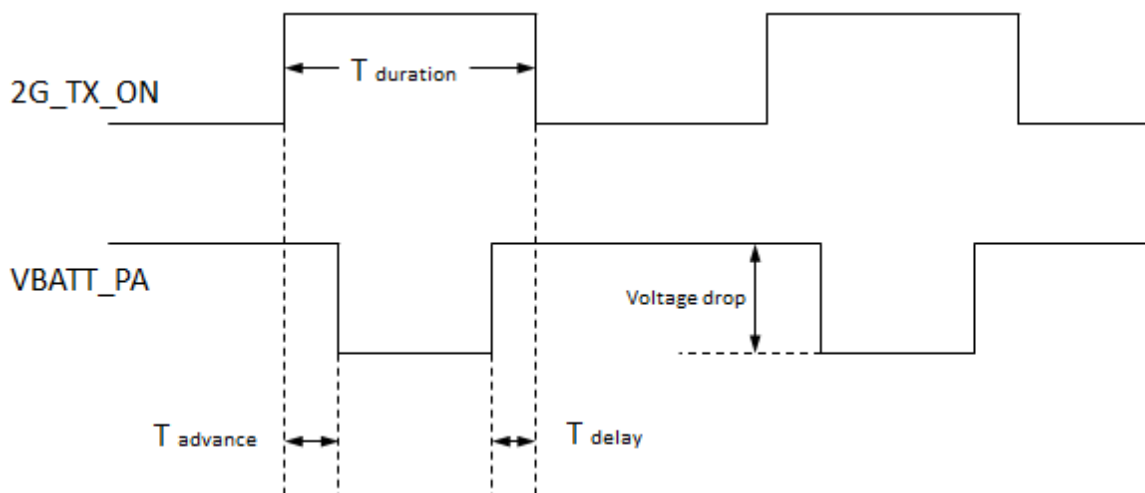

Figure 12. 2G_TX_ON State during TX Burst

3.21. GNSS Interface

The AirPrime HL6528RD-G and HL6528RD-G2.8V modules embed an integrated and high-sensitivity Global Navigation Satellite System (GNSS) solution.

Based on SiRFstarV™ from CSR, the AirPrime HL6528RD-G and HL6528RD-G2.8V modules combine GPS and GLONASS reception to improve navigation capabilities and position accuracy in obstructed view environments such as urban canyons. GNSS performances are improved by CW jammer and interference mitigation system and automated hardware blanking capabilities.

In addition, it supports Downloaded Extended Ephemeris Assisted-GNSS, for enhanced time to acquire or reacquire a fix.

The operation of GNSS is offloaded to a GNSS standalone solution to guarantee the availability of modem resources for best performance.

The GNSS implementation supports GPS L1 signal (1575.42 ± 20 MHz) and GLONASS L1 FDMA signals for frequency -7 to 6 (1597.5 – 1605.8 MHz), with 50Ω connection on the RF_GPS pad.

3.21.1. GNSS Performances

Table 39. GNSS Interface Specifications

Note: All values in the following table are preliminary and subject to change pending further testing.

Test	Parameters	Typical Value	
Sensitivity	GPS Autonomous Acquisition (dBm); Cold and Warm start conditions	-147	
	GPS Autonomous Acquisition (dBm); Hot start conditions	-159	
	GPS Navigation (dBm)	-161	
	GLONASS Navigation (dBm)	-158	
	GNSS Navigation (dBm)	-161	
	GPS Tracking (dBm)	-165	
	GLONASS Tracking (dBm)	-165	
Autonomous Cold Start	Time To First Fix (s)	50%	29.5
		95%	38.6
	2D Position Error (m)	50%	1.1
		95%	5.9
Autonomous Warm Start	Time To First Fix (s)	50%	24.7
		95%	34.8
	2D Position Error (m)	50%	1.6
		95%	4.5
Autonomous Hot Start	Time To First Fix (s)	50%	1.2
		95%	1.9
	2D Position Error (m)	50%	4.2
		95%	9.5
Aiding Warm Start	Time To First Fix (s)	95%	11
		95% (after 1 day)	10
		95% (after 3 days)	20
Aiding Warm Start	2D Position Error (m)	95% (after 3 days)	20
		95% (after 6 days)	50
		95% (after 6 days)	50

Note: Values in the table above are based on static conditions, RF GNSS level @-130dBm. Cold start does not include internal GNSS firmware download on first GNSS start.

3.21.2. GNSS Antenna Interface

Specifications for the GNSS antenna interface are defined in the table below.

Table 40. GNSS Antenna Specifications

Characteristics		GNSS
Frequency (MHz)	GPS L1	1575.42±20
	GLONASS L1 FDMA	1597.5-1605.8
RF Impedance (Ω)		50
VSWR max		2:1

The minimum isolation between GNSS and GSM antennas should be 20 dB.

3.21.3. GNSS Antenna Recommendations

Both passive and active antennas are supported by the AirPrime HL6528RD-G and HL6528RD-G2.8V modules.

The table below describes the expected performance function as input signal power.

Table 41. GNSS Antenna Recommendations

GNSS Signal Level Description	Input Signal Power (dBm)	Expected Performances
Absolute maximum	-110	Maximum to input level
Good	>-134	Best performance in TTFF and position accuracy
Acceptable	>-147	Minimum input level to allow initial acquisition without aiding
Poor	<-147	No signal acquisition without aiding
Minimum usable signal	-161	Below this level, no fix with reasonable error
Minimum tracking level	-165	Minimum level to lock the signal for fast recovery when the signal returns to the minimum usable level

For passive antennas, the internal LNA should be set in high gain mode. When configured in high gain mode, the noise figure of the HL6528RDx's GNSS input is 3dB.

For active antennas, the internal LNA gain should be set to low gain if external net gain (gain from antenna input to module input) is higher than 16dB. If the external net gain is lower than 16dB, it is advised to set the internal LNA gain in high gain. In any case, the external net gain should not exceed 24dB.

BOTTOM VIEW

Figure 16. AirPrime HL6528RDx Module (bottom view with dimensions)

>> 5. Design Guidelines

5.1. Power On Sequence

The PWR_ON_N pad has the minimum assertion time requirement of 25 ms, with LOW active. Once the valid power on trigger is detected, the PWR_ON_N pad status can be left open.

VBATT has to ramp up within 32 ms to reach the value of 3.35 V; otherwise, the module may not power up.

Figure 17. PWR_ON_N Sequence with T_{rampup} (TBC)

Note: As PWR_ON_N is internally pulled up with 100k Ω , a simple open collector or open drain transistor must be used for ignition.

Either UART1 or a USB interface could be used to send AT commands once the module has been powered on. Note that for USB connections, the time when AT commands can be sent will depend on the initialization time used for the USB connection with the USB host.

5.1.1. Using UART1

When using UART1 to send AT commands to the module, the HL6528RDx must be powered on by applying a LOW level logic to the PWR_ON_N pad (pad 59). When CTS toggles to low level, the module is ready to receive AT commands.

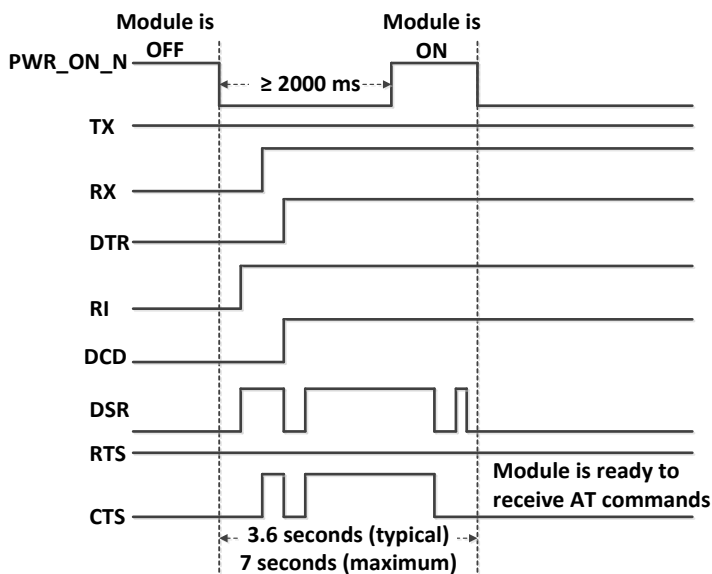

Figure 18. UART Signals during the Power ON Sequence (TBC)

5.1.2. Using USB

When using USB to send AT commands to the module, the HL6528RDx must be powered on by applying a LOW level logic to the PWR_ON_N pad (pad 59). VGPIO will appear to be ON within 25 ms; the module is then ready to receive AT commands.

Figure 19. PWR_ON_N Sequence with VGPIO Information (TBC)

5.2. Module Switch-Off

AT command `AT+PSCPOF` enables the user to properly switch the AirPrime HL6528RDx module off.

If required, the module can be switched off by controlling the power supply. This can be used, for example, when the system freezes and no reset line is connected to the AirPrime HL6528RDx module. In this case, the only way to get control back over the module is to switch off the power line.

PWR_ON_N, VGPIO and UART1_CTS signal behavior during the power off sequence is described in the figure below.

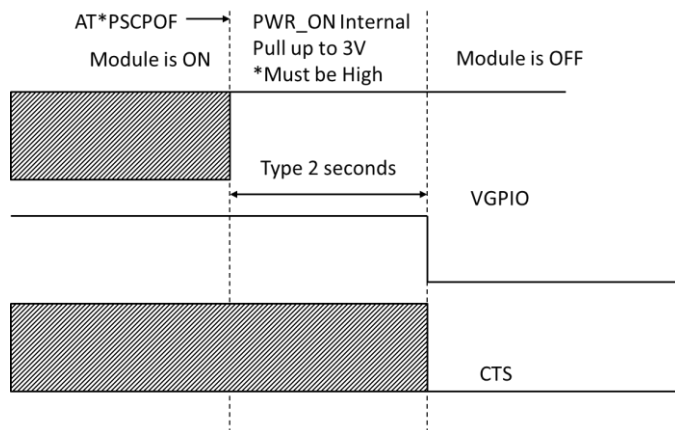

Figure 20. Power OFF Sequence for PWR_ON_N, VGPIO and UART1_CTS

5.3. Sleep Mode Management

AT command `AT+KSLEEP` enables the sleep mode configuration.

`AT+KSLEEP=0:`

- The AirPrime HL6528RDx module is active when DTR signal is active (low electrical level).
- When DTR is deactivated (high electrical level), the AirPrime HL6528RDx module enters sleep mode after a while.
- On DTR activation (low electrical level), the AirPrime HL6528RDx module wakes up.

AT+KSLEEP=1:

- The AirPrime HL6528RDx module determines when it enters sleep mode (when no more tasks are running).
- “0x00” character on the serial link wakes the AirPrime HL6528RDx module up.

AT+KSLEEP=2:

- The AirPrime HL6528RDx module never enters sleep mode.

In sleep mode, the module reduces its power consumption and remains waiting for the wake up signals either from the network (i.e. read paging block depending on the DRX value of the network) or the operating system (i.e. timers wake up timers activated) or the host controller (i.e. character on serial link or DTR signal).

5.4. ESD Guidelines for UIM Cards

Decoupling capacitors must be added as close as possible to the UIM card connectors on UIM1_CLK, UIM1_RST, UIM1_VCC and UIM1_DATA signals to avoid EMC issues and to pass the UIM card type approval tests.

A typical schematic for hardware UIM detection is provided below.

Figure 21. EMC and ESD Components Close to the UIM

5.5. ESD Guidelines for RF Interface

An ESD diode, placed close to the external antenna (main and GPS) ports, is highly recommended. Sierra Wireless recommends using the MURATA LXES15AAA1-117 as an ESD diode.

5.6. Power Supply

The AirPrime HL6528RDx module should not be supplied with voltage over 4.3 V even temporarily or however briefly.

If the system’s main board power supply unit is unstable or if the system’s main board is supplied with over 4.3 V, even in the case of transient voltage presence on the circuit, the HL6528RDx’s power amplifier and GPS chipset may be severely damaged.

To avoid such issues, add a voltage limiter to the module’s power supply lines so that VBATT and VBATT_PA signal pads will never receive a voltage surge over 4.3 V. The voltage limiter can be as simple as a Zener diode as shown in the diagram below.

Figure 22. Voltage Limiter Example

5.7. Audio Integration

5.7.1. Microphone Audio Design

5.7.1.1. Differential Connection Example

Figure 23. Example of a MIC Input Connection with LC Filter

The LC filter (L1, L2, C2, C3, and C4) is used to reduce EMI perturbation created by TDMA noise, but it is not mandatory. Good quality audio can be achieved without an LC filter depending on the design.

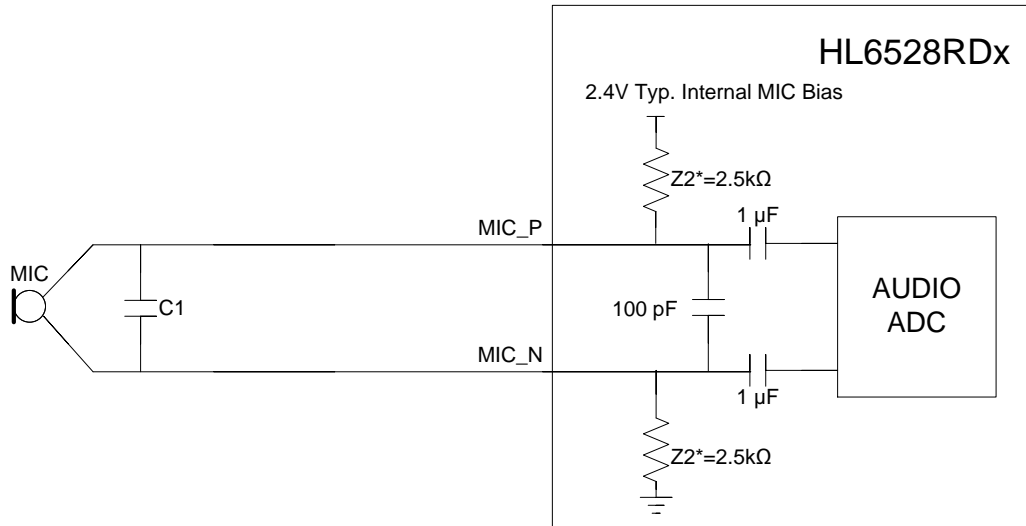

Figure 24. Example of a MIC Input Connection without LC Filter

Capacitor C1 is highly recommended to eliminate TDMA noise. Note that C1 must be close to the microphone.

Refer to the table below for the recommended components to use with a microphone connection.

Table 42. Recommended Components for a Microphone Connection

Component	Description/Details	Notes
C1	12pF to 33pF	Needs to be tuned depending on the design
C2, C3, C4	47pF	Needs to be tuned depending on the design
L1, L2	100nH	Needs to be tuned depending on the design

5.7.1.2. Single-Ended Connection Example

When a single-ended connection is used for MIC, MIC_N is just left open.

Figure 25. Example of a Single-Ended MIC Input Connection with LC Filter

The internal input impedance value becomes 1100Ω due to the connection of the other end to ground.

The single-ended design is very sensitive to TDMA noise; it is recommended to add L1 and C2 footprint as an LC filter to try to eliminate TDMA noise. Very good grounding on the MIC is required in order to ensure good performance against TDMA. Also, special care on the PCB layout must be taken.

When not used, the filter can be removed by replacing L1 with a 0Ω resistor and by disconnecting C2, as shown in the following figure.

Figure 26. Example of a Single-Ended MIC Input Connection without LC Filter

The capacitor C1 is highly recommended to eliminate TDMA noise, and it must be placed close to the microphone.

Refer to the table below for the recommended components to use with a single-ended microphone connection.

Table 43. Recommended Components for a Single-Ended Microphone Connection

Component	Description/Details	Notes
C1	12pF to 33pF	Needs to be tuned depending on the design
C2	12pF to 33pF	Needs to be tuned depending on the design
L1	100nH	Needs to be tuned depending on the design

5.7.2. Speaker Audio Design

The SPKR interface can be used in a single-ended or a differential connection. However, it is strongly recommended to use a differential connection in order to reject common mode noise and TDMA noise. Moreover, in single-ended mode, half (1/2) of the power is lost.

When using a single-ended connection, be sure to have a very good ground plane, very good filtering as well as shielding in order to avoid any disturbance on the audio path.

The following table lists the typical values of both speaker output.

Table 44. Speaker Details

Parameter	Typical Value	Connection
Z (SPKR_P, SPKR_N) (Ω)	32	Differential mode

Parameter	Typical Value	Connection
Z (SPKR_P, SPKR_N) (Ω)	32	Single-ended mode

It is recommended to add ESD protection to the speaker when it is exposed to the external environment. The ESD protection should be connected between the audio lines and a good ground, and placed as close to the speaker as possible.

It is important to select an appropriate speaker and filtering components to avoid TDMA noise.

5.7.2.1. SPKR Differential Connection

Note: Add a 33pF capacitor between the SPKR_P and SPKR_N pads to reduce TDMA noise.

Figure 27. Example of a Differential Connection for SPKR

5.7.2.2. SPKR Single-Ended Connection

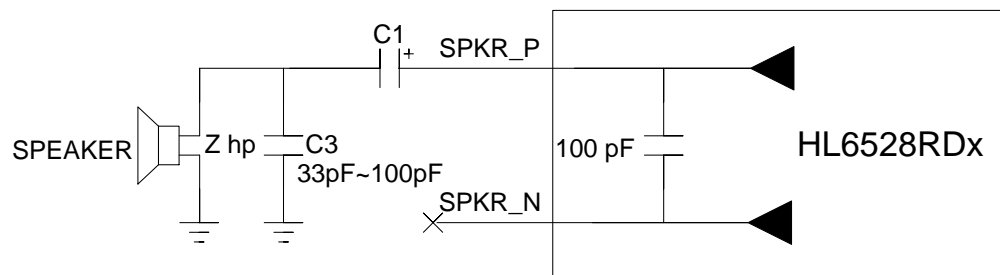

Figure 28. Example of a Single-Ended Speaker Connection (typical implementation)

In a single-ended connection:

- $4.7\mu\text{F} < C1 < 47\mu\text{F}$, depending on the speaker characteristics and output power
- the connection between the AirPrime HL6528RDx module pads and the speaker must be designed to keep the serial impedance lower than 1.5Ω
- SPKR_N can be left open
- output power is lost (-6dB) as compared to a differential connection

5.7.3. Audio Layout Guidelines

To avoid TDMA noise, it is recommended to surround the audio tracks with ground as shown in the following figure.

Figure 29. Audio Track Design

For differential connections, refer to the on following figure. Note that the differential audio line is always in parallel.

Figure 30. Differential Audio Connection

For single-ended connections, the negative pole of the microphone, MIC_N, should be connected to GND. Refer to the following figure.

Figure 31. Single-Ended Audio Connection

Caution: Avoid digital tracks crossing under and over the audio tracks.

It is highly recommended to have the MIC ground and the LC filter ground to act as an audio analog ground during the PCB layout. This audio ground, together with the MIC_P signal, should act as the differential line pair; and this audio ground should only be connected to the AirPrime HL6528RDx module ground, as close as possible to the LGA GND pad of the AirPrime HL6528RDx module. It is the same case for SPKR_P and SPKR_N.

Also, the audio interface is ESD sensitive. ESD protection MUST be added to the interface once it is externally accessible.

To avoid distortion and burst noise, the following guidelines should be followed:

- Audio signals must be symmetric (same components on each path)
- Differential signals must be routed in parallel
- Audio layer must be surrounded by 2 ground layers
- The link from one component to the ground must be as short as possible
- Separate the PCBs for the microphone and the speaker if possible
- Reduce the number of electronic components as much as possible (to avoid loss of quality and greater dispersion)

5.8. Radio Integration

5.8.1. GSM Antenna Integration with Antenna Detection Circuitry

The AirPrime HL6528RDx module is equipped with external antennas. A 50Ω line matching circuit between the module, the customer’s board and the RF antennas is required, for GSM and GPS feed path, as shown in the example below.

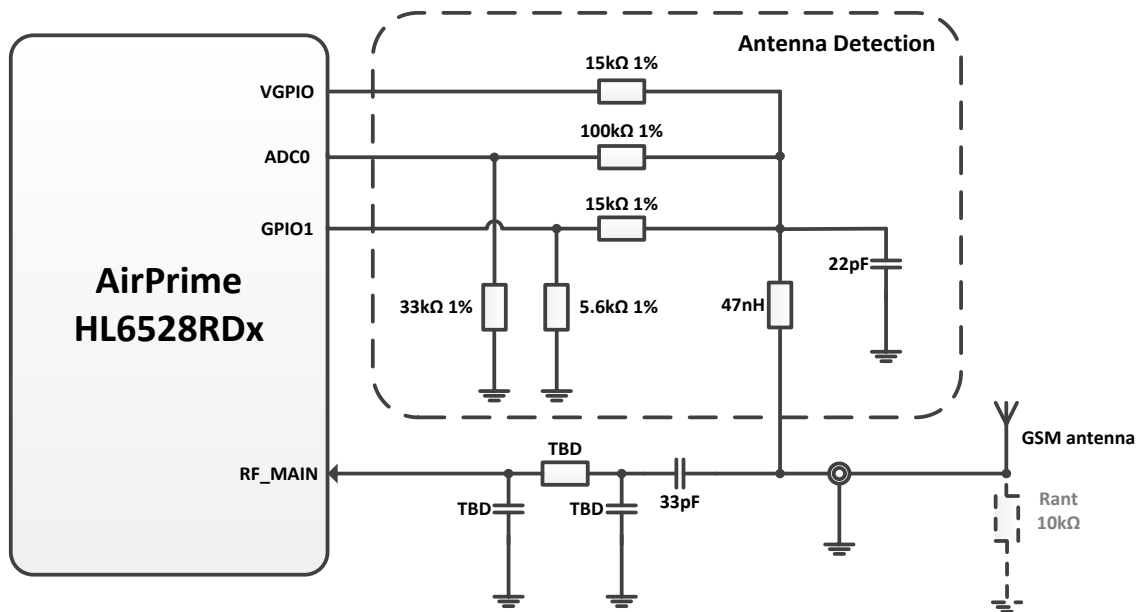

Figure 32. GSM Antenna Connection with Antenna Detection

Note: Antenna detection circuit is optional. Rant is the equivalent DC terminating resistor of the antenna. Rant should be close to 10KΩ.

5.8.2. GNSS Active Antenna Integration

The AirPrime HL6528RD-G and HL6528RD-G2.8V modules embed a GPS/GLONASS receiver inside. A possible implementation with an active GNSS antenna is defined below.

Figure 33. GNSS Application with Active Antenna

EXT_LNA_GPS_EN is a specific signal that automatically sets the AirPrime HL6528RD-G and HL6528RD-G2.8V modules' internal LNA to low gain when an external pull-down resistor is detected.

Note: When the application needs to monitor the active antenna current, current monitor devices can be connected to any of the module's GPIOs, and read with a dedicated AT command.

5.9. Temperature Monitor

The AirPrime HL6528RDx module is embedded with an internal temperature monitor that can be used to determine the module's internal temperature. Refer to document [2] AirPrime HL6528RDx AT Commands Interface Guide for more information about configuring the internal temperature monitor.

6. Flash Memory Endurance

As with other embedded devices, the AirPrime HL6528RDx uses flash (or non-volatile) memory which guarantees a limited number of program/erasing cycles per sector (100,000 cycles). Although a state-of-the-art mechanism has been implemented to limit the number of writing/erasing cycles, Sierra Wireless recommends using “write” AT commands appropriately and always with caution. AT commands used to write to and configure the embedded module’s flash memory are enumerated in document [2] AirPrime HL6528RDx AT Commands Interface Guide.

>> 7. Reliability Specification

The AirPrime HL6528RDx module is tested against the Sierra Wireless Industrial Reliability Specification defined below.

7.1. Reliability Compliance

The AirPrime HL6528RDx module connected on a development kit board application is compliant with the following requirements.

Table 45. Standards Conformity for the AirPrime HL6528RDx Embedded Modules

Abbreviation	Definition
IEC	International Electro technical Commission
ISO	International Organization for Standardization

7.2. Reliability Prediction Model

7.2.1. Life Stress Test

The following tests the AirPrime HL6528RDx module's product performances.

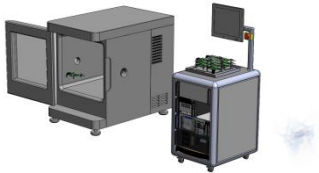

Table 46. Life Stress Test

Designation	Condition
Performance Test PT3T & PTRT 	Standard: N/A
	Special conditions: <ul style="list-style-type: none"> • Temperature: <ul style="list-style-type: none"> ▪ Class A: -30°C to +70°C ▪ Class B: -40°C to +85°C ▪ Rate of temperature change: $\pm 3^{\circ}\text{C}/\text{min}$ • Recovery time: 3 hours
	Operating conditions: Powered
	Duration: 14 days

7.2.2. Environmental Resistance Stress Tests

The following tests the AirPrime HL6528RDx module’s resistance to extreme temperature.

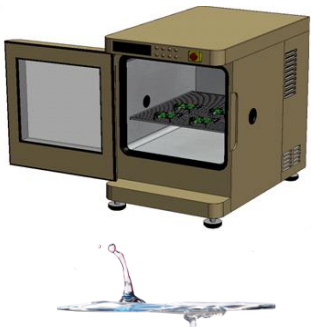

Table 47. Environmental Resistance Stress Tests

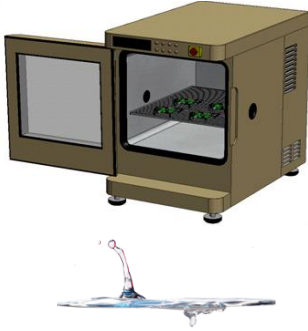

Designation	Condition
Cold Test Active COTA 	Standard: IEC 680068-2-1, Test Ad
	Special conditions: <ul style="list-style-type: none"> • Temperature: -40°C • Temperature variation: 1°C/min
	Operating conditions: Powered ON with a power cycle of 1 minute ON and 2 minutes OFF
	Duration: 3 days
Resistance to Heat Test RH 	Standard: IEC 680068-2-2, Test Bb
	Special conditions: <ul style="list-style-type: none"> • Temperature: +85°C • Temperature variation: 1°C/min
	Operating conditions: Powered ON with a power cycle of 15 minutes ON and 15 minutes OFF
	Duration: 50 days

7.2.3. Corrosive Resistance Stress Tests

The following tests the AirPrime HL6528RDx module’s resistance to corrosive atmosphere.

Table 48. Corrosive Resistance Stress Tests

Designation	Condition
Humidity Test HUT 	Standard: IEC 60068-2-3, Test Ca
	Special conditions: <ul style="list-style-type: none"> • Temperature: +65°C • RH: 95% • Temperature variation: 3 +/- 0.6°C/min
	Operating conditions: Powered on, DUT is powered up for 15 minutes and OFF for 15 minutes
	Duration: 10 days
Component Solder Wettability CSW 	Standard: JESD22-B102, Method 1/Condition C, Solderability Test Method
	Special conditions: <ul style="list-style-type: none"> • Test method: Dip and Look Test with Steam preconditioning 8 h +/- 15min. dip for 5 +/- 0.5 seconds
	Operating conditions: Un-powered
	Duration: 1 days

Designation	Condition
Moist Heat Cyclic Test MHCT 	Standard: IEC 60068-2-30, Test Db
	Special conditions: <ul style="list-style-type: none"> • Upper temperature: $+40 \pm 2^{\circ}\text{C}$ • Lower temperature: $+25 \pm 5^{\circ}\text{C}$ • RH: <ul style="list-style-type: none"> ▪ Upper temperature: 93% ▪ Lower temperature: 95% • Number of cycles: 21 (1 cycle/24 hours) • Temperature Variation: $3 \pm 0.6^{\circ}\text{C}/\text{min}$
	Operating conditions: Powered ON for 15 minutes during each 3 hours ramp up and 3 hours ramp down (in middle) for every cycle
	Duration: 21 days

7.2.4. Thermal Resistance Cycle Stress Tests

The following tests the AirPrime HL6528RDx module’s resistance to extreme temperature cycling.

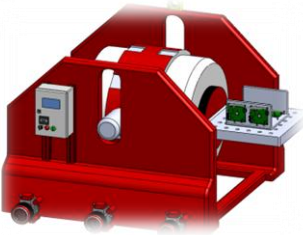

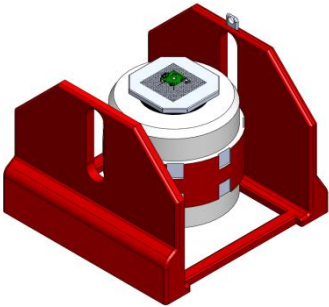

Table 49. Thermal Resistance Cycle Stress Tests

Designation	Condition
Thermal Shock Test TSKT 	Standard: IEC 60068-2-14, Test Na
	Special conditions: <ul style="list-style-type: none"> • Temperature: -30°C to $+80^{\circ}\text{C}$ • Temperature Variation: less than 30s • Number of cycles: 600 • Dwell Time: 10 minutes
	Operating conditions: Un-powered Duration: 9 days
Temperature Change TCH 	Standard: IEC 60068-2-14, Test Nb
	Special conditions: <ul style="list-style-type: none"> • Temperature: -40°C to $+90^{\circ}\text{C}$ • Temperature Variation: $3 \pm 0.6^{\circ}\text{C}/\text{min}$ • Number of cycles: 400 • Dwell Time: 10 minutes
	Operating conditions: Un-powered Duration: 29 days

7.2.5. Mechanical Resistance Stress Tests

The following tests the AirPrime HL6528RDx module’s resistance to vibrations and mechanical shocks.

Table 50. Mechanical Resistance Stress Tests

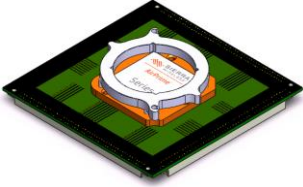

Designation	Condition
Sinusoidal Vibration Test SVT 	Standard: IEC 60068-2-6, Test Fc
	Special conditions: <ul style="list-style-type: none"> • Frequency range: 16 Hz to 1000 Hz • Displacement: 0.35mm (peak-peak) • Acceleration: <ul style="list-style-type: none"> ▪ 5G from 16 to 62 Hz ▪ 3G from 62 to 200 Hz ▪ 1G from 200 to 1000 Hz • Sweep rate: 1 octave / cycle • Number of Sweep: 20 sweeps/axis • Sweep direction: +/- X,+/- Y, +/- Z
	Operating conditions: Un-powered
	Duration: 2 days
Random Vibration Test RVT 	Standard: IEC 60068-2-64, Test Fh
	Special conditions: <ul style="list-style-type: none"> • Frequency range: 10 Hz – 2000 Hz • Power Spectral Density in [(m/s²)²/Hz] <ul style="list-style-type: none"> ▪ 0.1 g²/Hz at 10Hz ▪ 0.01 g²/Hz at 250Hz ▪ 0.005 g²/Hz at 1000Hz ▪ 0.005 g²/Hz at 2000Hz • Peak factor : 3 • Duration per Axis : 1 hr / axis
	Operating conditions: Un-powered
	Duration: 41 days
Mechanical Shock Test MST 	Standard: IEC 60068-2-27, Test Ea
	Special conditions: <ul style="list-style-type: none"> • Shock Test 1: <ul style="list-style-type: none"> ▪ Wave form: Half sine ▪ Peak acceleration: 30g ▪ Duration: 11ms ▪ Number of shocks: 8 ▪ Direction: ±X, ±Y, ±Z • Shock Test 2: <ul style="list-style-type: none"> ▪ Wave form: Half sine ▪ Peak acceleration: 100g ▪ Duration: 6ms ▪ Number of shocks: 3 ▪ Direction: ±X, ±Y, ±Z
	Operating conditions: Un-powered
	Duration: 72 hours

7.2.6. Handling Resistance Stress Tests

The following tests test the AirPrime HL6528RDx module's resistance to handling malfunctions and damage.

Caution: *Special conditions for ESDC and ESD tests are not met on the GPS pad (pad 38).*

Table 51. Handling Resistance Stress Tests

Designation	Condition
ESDC Test 	Standard: JESD22-A114, JESD22-A115, JESD 22-C101
	Special conditions: <ul style="list-style-type: none"> • HBM (Human Body Model) : 1500V (Class 1C) • MM (Machine Model) : 150V (Class B) • CDM (Charged Device Model) : 500V (Class III)
	Operating conditions: Powered
	Duration: 3 days
ESD Test 	Standard: IEC 61000-4-2
	Special conditions: <ul style="list-style-type: none"> • Contact Voltage : ±2kV, ±4kV, ±6kV • Air Voltage: ±2kV, ±4kV, ±8kV
	Operating conditions: Powered
	Duration: 3 days
Free Fall Test FFT 1 	Standard : IEC 60068-2-32, Test Ed
	Special conditions: <ul style="list-style-type: none"> • Number of drops: 2 drops per unit • Height: 1m
	Operating conditions: Un-powered
	Duration: 6 hours

8. Regulatory Legal Information

8.1. Label

The AirPrime HL6528RDx module is labeled with its own FCC ID on the shield side. Each HL6528RDx variant has its own FCC ID as listed in the table below.

Table 52. AirPrime HL6528RDx FCC IDs

Model Name	FCC ID
HL6528RD	N7NHL6528RD
HL6528RD-G	N7NHL6528RDG
HL6528RD-2.8V	N7NHL6528RD28V
HL6528RD-G2.8V	N7NHL6528RDG28V

When the module is installed in a customer's product, the FCC ID label on the module will not be visible. To avoid this case, an exterior label must be stuck on the surface of the customer's product to indicate the FCC ID of the enclosed module. This label can use wording such as the following: "Contains Transmitter module FCC ID: <FCC ID as listed in Table 52 AirPrime HL6528RDx FCC IDs>" or "Contains FCC ID: <FCC ID as listed in Table 52 AirPrime HL6528RDx FCC IDs>".

8.2. FCC Regulations

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

This device has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

1. Reorient or relocate the receiving antenna
2. Increase the separation between the equipment and receiver.
3. Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
4. Consult the dealer or an experienced radio/TV technician for help.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

8.3. RF Exposure Information

This Modular Approval is limited to OEM installation for mobile and fixed applications only. The antenna installation and operating configurations of this transmitter, including any applicable source-based time-averaging duty factor, antenna gain and cable loss must satisfy MPE categorical Exclusion Requirements of §2.1091.

The antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons, must not be collocated or operating in conjunction with any other antenna or transmitter, except in accordance with FCC multi-transmitter product procedures.

The end user has no manual instructions to remove or install the device and a separate approval is required for all other operating configurations, including portable configurations with respect to 2.1093 and different antenna configurations.

According to the MPE RF explore report, maximum antenna gain allowed for use with this device is 5.1 dBi for GSM 850 and 2.2 dBi for PCS 1900.

When the module is installed in the host device, the FCC ID label must be visible through a window on the final device or it must be visible when an access panel, door or cover is easily removed. Otherwise, a second label must be placed on the outside of the final device that contains the following text: —Contains FCC ID: <FCC ID as listed in Table 52 AirPrime HL6528RDx FCC IDs>

8.4. IC Regulations

IC Radiation Exposure Statement:

This device complies with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions:

1. this device may not cause interference, and
2. this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes:

1. l'appareil ne doit pas produire de brouillage, et
2. l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'entraîner des comportements non-désirés

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

Under Industry Canada regulations, this radio transmitter may only operate using an antenna of a type and maximum (or lesser) gain approved for the transmitter by Industry Canada. To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p) is not more than necessary for successful communication.

Labeling Requirements for the Host Device (from Section 7.2, RSS RSP-100 issue 10, November 2014): The host device shall be properly labeled to identify the module within the host device. The Industry Canada certification label of a module shall be clearly visible at all times when installed in the host device, otherwise the host device must be labeled to display the Industry Canada certification number of the module, preceded by the words — Contains transmitter module, or the word — Contains, or similar wording expressing the same meaning, as follows: Contains transmitter module IC: <IC as listed in the table below>.

Table 53. AirPrime HL6528RDx IC IDs

Model Name	IC ID
HL6528RD	2417C-HL6528RD
HL6528RD-G	2417C-HL6528RDG
HL6528RD-2.8V	2417C-HL6528RD28V
HL6528RD-G2.8V	2417C-HL6528RDG28V

This device complies with IC radiation exposure limits set forth for an uncontrolled environment. In order to avoid the possibility of exceeding the IC radio frequency exposure limits, human proximity to the antenna shall not be less than 20 cm (8 inches) during normal operation.

Cet appareil est conforme aux limites d'exposition aux rayonnements de la IC CNR-102 définies pour un environnement non contrôlé. Afin d'éviter la possibilité de dépasser les limites d'exposition aux fréquences radio de la IC CNR-102, la proximité humaine à l'antenne ne doit pas être inférieure à 20 cm (8 pouces) pendant le fonctionnement normal.

This radio transmitter (identify the device by certification number, or model number if Category II) has been approved by Industry Canada to operate with the antenna types listed below with the maximum permissible gain and required antenna impedance for each antenna type indicated. Antenna types not included in this list, having a gain greater than the maximum gain indicated for that type, are strictly prohibited for use with this device.

8.5. CE

The minimum distance between the user and/or any bystander and the radiating structure of the transmitter is 20 cm.

Assessment of compliance of the product with the requirements relating to the Radio and Telecommunication Terminal Equipment Directive (EC Directive 1999/5/EC) was performed by Telefication BV (Notified Body No.0560).

>> 9. Ordering Information

Model Name	Part Number	Designation
HL6528RD	1102609	HL6528RD, GENERIC 1.8V
HL6528RD-G	1102610	HL6528RD-G, GENERIC 1.8V
HL6528RD-2.8V	1102611	HL6528RD-2.8V, GENERIC 2.8V
HL6528RD-G2.8V	1102612	HL6528RD-G2.8V, GENERIC 2.8V
DEV-KIT	6000620	DEV-KIT, HL6 series

10. Terms and Abbreviations

Abbreviation	Definition
ADC	Analog to Digital Converter
AGC	Automatic Gain Control
AT	Attention (prefix for modem commands)
AVL	Automatic Vehicle Location
CCB	Customer Carrier Board
CDMA	Code Division Multiple Access
CF3	Common Flexible Form Factor
CLK	Clock
CODEC	Coder Decoder
CPU	Central Processing Unit
DAC	Digital to Analog Converter
DTR	Data Terminal Ready
EGNOS	European Geostationary Navigation Overlay Service
EMC	Electromagnetic Compatibility
EMI	Electromagnetic Interference
EN	Enable
ESD	Electrostatic Discharges
ETSI	European Telecommunications Standards Institute
FDMA	Frequency-division multiple access
GAGAN	GPS aided geo augmented navigation
GLONASS	Global Navigation Satellite System
GND	Ground
GNSS	Global Navigation Satellite System
GPIO	General Purpose Input Output
GPRS	General Packet Radio Service
GSM	Global System for Mobile communications
Hi Z	High impedance (Z)
IC	Integrated Circuit
IMEI	International Mobile Equipment Identification
I/O	Input / Output
LED	Light Emitting Diode
LNA	Low Noise Amplifier
MAX	Maximum
MIN	Minimum
MSAS	Multi-functional Satellite Augmentation System
N/A	Not Applicable
PA	Power Amplifier
PC	Personal Computer
PCB	Printed Circuit Board
PCL	Power Control Level

Abbreviation	Definition
PLL	Phase Lock Loop
PWM	Pulse Width Modulation
QZSS	Quasi-Zenith Satellite System
RF	Radio Frequency
RFI	Radio Frequency Interference
RMS	Root Mean Square
RST	Reset
RTC	Real Time Clock
RX	Receive
SCL	Serial Clock
SDA	Serial Data
SIM	Subscriber Identification Module
SMD	Surface Mounted Device/Design
SPI	Serial Peripheral Interface
SV	Satellite Vehicle
SW	Software
PSRAM	Pseudo Static RAM
TBC	To Be Confirmed
TBD	To Be Defined
TP	Test Point
TTS	Text To Speech
TX	Transmit
TYP	Typical
UART	Universal Asynchronous Receiver-Transmitter
UICC	Universal Integrated Circuit Card
USB	Universal Serial Bus
UIM	User Identity Module
VBATT	Main Supply Voltage from Battery or DC adapter
VSWR	Voltage Standing Wave Ratio
