## INVENTRONICS

EUC-075SxxxDV(SV)

## Features

- High Efficiency (Up to 90\%)
- Active Power Factor Correction (0.99 Typical)
- Constant Current Output
- Dimming Function
- Lightning Protection
- All-Around Protection: OVP, SCP, OTP
- Waterproof (IP67)

## C $\in$ TUV CB

- SELV

## Description

The EUC-075SxxxDV(SV) Series operate from a $90 \sim 305$ Vac input range. They are designed to be highly efficient and highly reliable. Features include dimming control, over voltage protection, short circuit protection and over temperature protection.

## Models

| Output <br> Current | Input <br> Voltage <br> Range(1) | Output <br> Voltage <br> Range | Max. <br> Output <br> Power | Typical <br> Efficiency <br> $(2)$ | Power Factor <br> 120Vac | 220Vac | Model Number <br> (3) |

## Input Specifications (Continued)

| Parameter | Min. | Typ. | Max. | Notes |
| :---: | :---: | :---: | :---: | :---: |
| Input AC Current | - | - | 0.9 A | Measured at full load and 100 Vac input. |
|  | - | - | 0.42 A | Measured at full load and 220 Vac input. |
| Inrush Current | - | - | 60 A | At 220 Vac input, $25^{\circ} \mathrm{C}$ cold start, duration=1 ms, 10\%lpk-10\%lpk. |
| Inrush Current ( $1^{2}$ t) | - | - | $1 \mathrm{~A}^{2} \mathrm{~s}$ |  |
| Power Factor | 0.9 | - | - | At 100Vac-277Vac,100\%load |
| THD | - | - | 20\% |  |

Output Specifications

| Parameter | Min. | Typ. | Max. | Notes |
| :---: | :---: | :---: | :---: | :---: |
| Output Current Range | -5\% | - | 5\% |  |
| Ripple and Noise (pk-pk) | - | - | $5 \% \mathrm{~V}_{\circ}$ | Measured by 20 MHz bandwidth oscilloscope and the output paralleled a 0.1 uF ceramic capacitor and a 10 uF electrolytic capacitor. Vo is the maximum output voltage. |
| No Load Output Voltage $\begin{aligned} & \mathrm{Io}=350 \mathrm{~mA} \\ & \mathrm{Io}=450 \mathrm{~mA} \\ & \mathrm{Io}=700 \mathrm{~mA} \\ & \mathrm{Io}=1050 \mathrm{~mA} \\ & \mathrm{lo}=1400 \mathrm{~mA} \\ & \mathrm{Io}=2100 \mathrm{~mA} \\ & \mathrm{Io}=2800 \mathrm{~mA} \\ & \mathrm{Io}=3750 \mathrm{~mA} \\ & \mathrm{Io}=5000 \mathrm{~mA} \end{aligned}$ |  | $\begin{aligned} & 224 \mathrm{~V} \\ & 172 \mathrm{~V} \\ & 112 \mathrm{~V} \\ & 76 \mathrm{~V} \\ & 58 \mathrm{~V} \\ & 40 \mathrm{~V} \\ & 34 \mathrm{~V} \\ & 25 \mathrm{~V} \\ & 19 \mathrm{~V} \end{aligned}$ |  |  |
| Line Regulation | - | - | $\pm 1 \%$ |  |
| Load Regulation | - | - | $\pm 3 \%$ |  |
|  | - | 0.8 s | 1.2 s | Measured at 120 Vac input. |
|  | - | 0.4 s | 0.6 s | Measured at 220 Vac input. |
| Temperature coefficient | - | - | $0.06 \% /{ }^{\circ} \mathrm{C}$ | Case temperature $=0^{\circ} \mathrm{C} \sim$ Tc max |

Note: All specifications are typical at $25^{\circ} \mathrm{C}$ unless otherwise stated.

## Protection Functions

| Parameter | Min. | Typ. | Max. | Notes |
| :--- | :---: | :---: | :---: | :--- |
| Over Temperature <br> Protection-Tc | - | $100{ }^{\circ} \mathrm{C}$ | - | Latch mode. The power supply shall return to <br> normal operation only after the power is turn-on <br> again. |
| Short Circuit Protection | No damage shall occur when any output operating in a short circuit condition. The power <br> supply shall be self-recovery when the fault condition is removed. |  |  |  |

EUC-075SxxxDV(SV)

## Total Harmonic Distortion

## Dimming Control (On secondary side)

The function has two versions. One is with internal pull-up resistor, the output is full load when the dimming leads are floated. Another is with internal pull-down resistor, the output is $10 \%$ full load when the dimming leads are floated.

1. With pull-up resistor (Default, without suffix):

| Parameter | Min. | Typ. | Max. | Notes |
| :--- | :---: | :---: | :---: | :---: |
| 10V output voltage | 9.8 V | 10 V | 10.2 V |  |
| 10V output source current | 0 mA | - | 10 mA |  |
| Absolute maximum voltage <br> on the 1~10V input pin | -2 V | - | 12 V |  |
| Source current on 1~10V input pin | 0 mA | - | 0.5 mA |  |
| Value of Rin ( the resistor inside the LED <br> driver which locate between the 1-10V <br> input and 10V output pin) | 19.8 K | 20 K | 20.2 K |  |

|  | 10 V OUTPUT (YLW) |
| :---: | :---: |
| $\xi R i n$ | 1-10V INPUT (PUR) |
| EUC-075SxxxDV | GND (GRN) - 1-10Vdc |
|  |  |
|  |  |

Implementation 1: DC input

## INVENTRONIGS

## Implementation 2: External resistor

## Notes:

1. If the dimming function is not used, please let the dimming leads floated.
2. Io is actual output current and Ir is rated current without dimming control.
3. For the driver to operate properly, the load voltage must be maintained above the minimum voltage threshold (approx. 50\% of the max. output voltage for any given model).
4. If the output voltage is maintained above $50 \%$ of the maximum output voltage, the dimming control may be operated over the entire $1-10 \mathrm{~V}$ range with output current varying from $100 \%$ down to practically $10 \%$.
5. The dimming signal is allowed to be less than 1 V , however, when it for $0-1 \mathrm{~V}$, the output current can maintain about $10 \%$ Ir. When it for $8.5-10 \mathrm{~V}$, the output current can maintain about $100 \% \mathrm{Ir}$.
6. Do not connect the GND of dimming to the output; otherwise, the LED driver can not work normally.
7. With pull-down resistor: (The model number has a suffix -0040)

Implementation 1: DC input

## INVENTRONICS

Implementation 2: External resistor

## Implementation 3: External resistor and 1-10V DC Input

## Notes:

1. If the dimming function is not used, please short 10 V output pin (yellow) and 1-10 input pin (purple).
2. Io is actual output current and Ir is rated current without dimming control.
3. For the driver to operate properly, the load voltage must be maintained above the minimum voltage threshold (approx. 50\% of the max. output voltage for any given model).
4. If the output voltage is maintained above $50 \%$ of the maximum output voltage, the dimming control may be operated over the entire 1-10V range with output current varying from 100\% down to practically $10 \%$.
5. The dimming signal is allowed to be less than 1 V , however, when it for $0-1 \mathrm{~V}$, the output current can maintain about $10 \% \mathrm{Ir}$. When it for $8.5-10 \mathrm{~V}$, the output current can maintain about $100 \% \mathrm{lr}$.
6. Do not connect the GND of dimming to the output; otherwise, the LED driver can not work normally.
