

Features

- Ultra High Efficiency (Up to 91%)
- High Power Factor (0.99 Typical)
- Constant Current Output
- Lightning Protection
- Dimming Function
- All-Round Protection: OVP, SCP, OTP
- Waterproof (IP67)

CE CQC TUV CB

Description

The EUC-096SxxxDV(SV) series operate from a 90 ~ 305 Vac input range. They are designed to be highly efficient and highly reliable. Features include dimming function, lightning protection, over voltage protection, short circuit protection, and over temperature protection.

Notes: (1) Measured at 25°C, full load and 220 Vac input.

(2) A suffix -xxxx may be added to denote variations or modifications to the base product, where x can be any alphanumeric character or blank.

(3) The DV suffix may be changed to SV to omit the dimming function and remove the three wires associated with that function.

Dimming Control (On secondary side)

Parameter	Min.	Typ.	Max.	Notes
Absolute maximum voltage on the 1~10V input pin	0 V	-	12 V	
Source current on 1~10V input pin	0 mA	-	0.5 mA	
Value of Rin (the resistor inside the LED driver which locate between the 1-10V input and Vcc output pin)	19.8 K	20 K	20.2 K	

The dimmer control is operated from an input signal of 1 – 10 Vdc. Recommended implementations are provided below.

Implementation 1: DC input

Implementation 2: External resistor

Notes:

1. I_o is actual output current and I_r is rated current without dimming control.
2. For the driver to operate properly, the load voltage must be maintained above the minimum voltage threshold (approx. 50% of the max. output voltage for any given model).
3. If the output voltage is maintained above 50% of the maximum output voltage, the dimming control may be operated over the entire 1-10V range with output current varying from 10% to 100% of I_r .
4. The dimming signal is allowed to be less than 1V, however, when it is 0-1V, the output current is 10% I_o .
5. Do not connect the GND of dimming to the output cable; otherwise, the LED driver cannot work normally.
