# Trademarks

## **Trademarks:**

- Ethernet is a registered trademark of XEROX Corporation in the United States.
- FCRAM is a trademark of Fujitsu Microelectronics Limited, Japan.
- FerVID family is a trademark of Fujitsu Microelectronics Limited, Japan.
- MirrorBit is a trademark of Spansion Inc.
- SPANSION is a trademark of Spansion Inc.
- Amplify is a registered trademark of Synplicity, Inc.

Other company names and brand names are the trademarks or registered trademarks of their respective owners.

### ISDN Digital Telephone LSIs

Part number	Functions	CODEC	Power supply voltage (V)	Package
				QFP
MB86434	AIU for ISDN digital telephones CODEC, DTMF tones, service tone Internal ringer tone	A-laW μ-laW 14-bit linear	+5±5%	64P

Package: P - Plastic

### LSIs for Digital Mobile Telephones

Part number	Functions	Compression law	Power supply voltage (V)	Package
				LQFP
MB86435	3 V single power supply AIU	A-laW μ-laW linear	2.7 to 3.6	64P
MB86437				48P

Package: P - Plastic

# Mobile, Wireless Communication Products

Mobile, Wireless Communication		Input frequency band of prescaler	PLL type	Prescaler divide ratio	Part number	Features
PLL Frequency Synthesizers	Low Noise Single Integer-N PLL	100 MHz to 2.5 GHz	RF Integer-N	32/33, 64/65	MB15E07SR	For digital telecommunications equipment, Low noise
		700 MHz to 3.0 GHz	RF Integer-N	64/65, 128/129	MB15E06SR	For digital telecommunications equipment, Low noise
		300 MHz to 2.0 GHz	RF Integer-N	64/65, 128/129	MB15E05SR	For digital telecommunications equipment, Low noise
	Single Integer-N PLL	700 MHz to 2.5 GHz	RF Integer-N	32/33, 64/65	MB15E07SL	For digital telecommunications equipment, Low power dissipation
		100 MHz to 2.0 GHz	RF Integer-N	64/65, 128/129	MB15E05SL	For digital telecommunications equipment, Low power dissipation
		100 MHz to 1.2 GHz	RF Integer-N	64/65, 128/129	MB15E03SL	For digital telecommunications equipment, Low power dissipation

		Application	Part number	Features
VCO *	Single Type (700 MHz to 2500 MHz)	CDMA, GSM, PCS, PHS	VC-90 series	Compact type with wide variable frequency band
			V10x series	Ultra Compact type with wide variable frequency band
	Dual Type (800 MHz to 2500 MHz)	CDMA, PCS, GSM	V08 series	Compact dual band type with band selection function
			V09 series	Compact dual band type with band selection function
Transmitter Module *	Single Type (824MHz to 1780MHz)	CDMA (CELL band) (K-PCS band)	T021 series	Built in Duplexer, PowerAmp and Band Pass Filter
	Single Type (824MHz to 1980MHz)	W-CDMA I, V, VIII	T031 series	Built in Duplexer, PowerAmp and Band Pass Filter
SAW Duplexer *	3.0 × 2.5		D5GA series D5GF series	CDMA/W-CDMA V
			D5GD series D5GK series	W-CDMA VIII
			D5GC series	J-CDMA (27MHz)
			D6GQ series D6GZ series	US-PCS/W-CDMA II
	2.5 × 2.0		D5JB series	CDMA/W-CDMA V

## VCO

Part number	Functions	Application	Frequency (MHz)	Power supply voltage (V)	Package Typ. (mm)
VC-90 series	Voltage Controlled Oscillator	CDMA, GSM, PCS, PHS	700 to 2500	2.5 to 3.3	5.0 × 4.0 × 1.55
V10x series					4.5 × 3.2 × 1.5
V08 series		CDMA, PCS, GSM	800 to 2500	2.8	5.5 × 4.8 × 1.8
V09 series					5.0 × 4.0 × 1.4

(Product of FUJITSU MEDIA DEVICES LIMITED)

## Transmitter Module

Part number	Functions	Application	Frequency (MHz)	Power supply voltage (V)	Package Typ. (mm)
T021 series	Built in Duplexer, PowerAmp and Band Pass Filter	CDMA (CELL band)	824 to 849	3.4	8.0 × 5.0 × 1.4
		CDMA (K-PCS band)	1750 to 1780		
T031 series	Built in Duplexer, PowerAmp and Band Pass Filter	W-CDMA I	1920 to 1980	3.4	7.0 × 4.0 × 1.2
		W-CDMA V	824 to 849		
		W-CDMA VIII	880 to 915		

(Product of FUJITSU MEDIA DEVICES LIMITED)

## SAW Duplexer for Mobile Communication System

Correspondence system	Size (mm)	Part Number	Remarks
CDMA/W-CDMA V	3.0 × 2.5	FAR-D5GA-881M50-D1AA	Two types of package are available
	3.0 × 2.5	FAR-D5GF-881M50-D1FB	Rx: Balanced 100 ohm
	2.5 × 2.0	FAR-D5JB-881 M50-D3AA	Two types of package are available
W-CDMA VIII	3.0 × 2.5	FAR-D5GK-942M50-D1KF	-
	3.0 × 2.5	FAR-D5GD-942M50-D1DF	Rx: Balanced 100 ohm
J-CDMA (27MHz)	3.0 × 2.5	FAR-D5GC-911M50-D1CA	-
US-PCS/W-CDMA II	3.0 × 2.5	FAR-D6GQ-1G9600-D1QBQ	Rx: Balanced 100 ohm
	3.0 × 2.5	FAR-D6GZ-1G9600-D1ZA	Two types of package are available

(Product of FUJITSU MEDIA DEVICES LIMITED)

## SAW Filter for Mobile Communication System

Correspondence system	Transmission/ Reception	Size (mm)	Part number	Remarks
CDMA/W-CDMA V	Transmission	1.4 × 1.0	FAR-F5KA-836M50-D4DF	Unbalanced
			FAR-F5KB-836M50-B4ER	Balanced 100 ohm output
			FAR-F5KB-836M50-B4EG	Balanced 200 ohm output
	Reception	1.4 × 1.0	FAR-F5KA-881M50-D4DB	Unbalanced
			FAR-F5KB-881M50-B4ED	Balanced 100 ohm output
			FAR-F5KB-881M50-B4EJ	Balanced 200 ohm output
GSM850	Transmission	1.4 × 1.0	FAR-F5KA-836M50-D4CM	Unbalanced
	Reception	1.4 × 1.0	FAR-F5KB-881M50-B4EA	Balanced 150 ohm output
EGSM	Transmission	1.4 × 1.0	FAR-F5KA-897M50-D4DC	Unbalanced
	Reception	1.4 × 1.0	FAR-F5KA-942M50-D4DD	Unbalanced
			FAR-F5KB-942M50-B4EB	Balanced 150 ohm output
GPS	-	1.4 × 1.0	FAR-F6KA-1G5754-L4AA	Unbalanced
			FAR-F6KA-1G5754-L4AJ	Unbalanced
			FAR-F6KA-1G5754-L4AB	Ultra low insertion loss, Unbalanced
			FAR-F6KB-1G5754-B4GE	Balanced 100 ohm output, Low loss
			FAR-F6KB-1G5754-B4GU	Balanced 100 ohm output, High Attenuation
W-CDMA IX	Transmission	1.4 × 1.0	FAR-F6KA-1G7675-D4CT	Unbalanced
			FAR-F6KB-1G7675-B4GF	Balanced 200 ohm input
	Reception	1.4 × 1.0	FAR-F6KA-1G8625-D4DH	Unbalanced
			FAR-F6KB-1G8625-B4GT	Balanced 100 ohm input
DCS	Transmission	1.4 × 1.0	FAR-F6KB-1G8625-B4GG	Balanced 200 ohm input
			FAR-F6KA-1G7475-D4CY	Unbalanced
			FAR-F6KA-1G8425-D4CK	Unbalanced
US-PCS/W-CDMA II	Reception	1.4 × 1.0	FAR-F6KB-1G8425-B4GA	Balanced 150 ohm output
			FAR-F6KA-1G8800-L4AF	Unbalanced
			FAR-F6KA-1G9600-D4DQ	Unbalanced, high attenuation
GSM1900	Reception	1.4 × 1.0	FAR-F6KB-1G9600-B4GP	Balanced 100 ohm output
			FAR-F6KA-1G9600-D4CR	Unbalanced
			FAR-F6KB-1G9600-B4GB	Balanced 150 ohm output
W-CDMA I	Transmission	1.4 × 1.0	FAR-F6KA-1G9500-D4DG	Unbalanced
			FAR-F6KB-1G9500-B4GJ	Balanced 100 ohm input
	Reception	1.4 × 1.0	FAR-F6KA-2G1400-D4CG	Unbalanced
			FAR-F6KB-2G1400-B4GC	Balanced 100 ohm output
TD-SCDMA	-	1.4 × 1.0	FAR-F6KA-2G0175-D4DR	Unbalanced
			FAR-F6KA-2G4418-D4CU	Unbalanced
W-LAN	-	1.4 × 1.0	FAR-F6KA-2G4418-A4VA	Unbalanced, high power handling
			FAR-F6KB-2G4418-B4GL	Balanced 100 ohm output

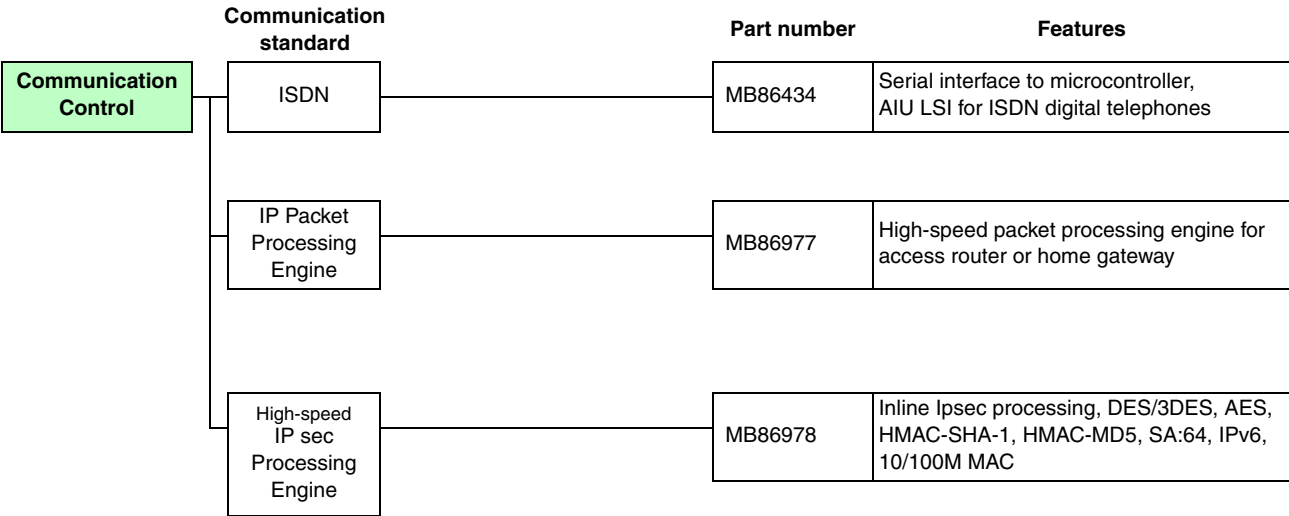

(Product of FUJITSU MEDIA DEVICES LIMITED)

## SAW Dual Filter for Mobile Communication System

Correspondence system	Transmission /Reception	Size (mm)	Part number	Remarks
EGSM + DCS	Reception	1.8 × 1.4	FAR-G6KG-1G8425-Y4SA	Balanced 150 ohm output, Opposite type of Filter position is available.
EGSM + GSM850	Reception	1.8 × 1.4	FAR-G5KG-942M50-Y4SD	Balanced 150 ohm output, Opposite type of Filter position is available.
GSM850 + GSM1900	Reception	1.8 × 1.4	FAR-G6KG-1G9600-Y4PB	Balanced 150 ohm output, Opposite type of Filter position is available.
GSM1900 + DCS	Reception	1.8 × 1.4	FAR-G6KG-1G9600-Y4SC	Balanced 150 ohm output, Opposite type of Filter position is available.
CDMA + US-PCS	Reception	2.0 × 1.6	FAR-G6KE-1G9600-Y4LY	Balanced 100 ohm output, Opposite type of Filter position is available.
J-CDMA	Transmission	1.8 × 1.4	FAR-G5KL-911M50-D4XC	Unbalanced, 1 input/2 output
	Transmission	1.8 × 1.4	FAR-G5KK-911M50-D4KE	Unbalanced, 2 input/2 output
W-CDMA I + V	Transmission	1.8 × 1.4	FAR-G6KG-1G9500-Y4PG	Balanced 200 ohm input
	Reception	1.8 × 1.4	FAR-G6KG-2G1400-Y4SH	Balanced 200 ohm output

# Communication Control/Communication Network

# Communication Control/Communication Network

## Communication Control

### ISDN

Part number	Functions	Communication standard	Power supply voltage (V)	Package
				QFP
MB86434	AIU LSI for ISDN digital telephones, Internal CODEC, DTMF tones, service tone, and ringer tone	-	+5 ± 5%	64P

Package: P - Plastic

### IP Packet Processing Engine

Part number	Functions	Power supply voltage (V)	Package
			LQFP
MB86977	Enable to process following functions with hardware. IP Packet Forwarding Packet Filtering NAT PPPoE and more. Supports QoS, DMZ, IPv6 and more. 10/100M MAC (Conforms to IEEE802.3)	3.3 ± 0.3 1.8 ± 0.15	208P

Package: P - Plastic

### High Speed IP sec Processing Engine

Part number	Functions	Power supply voltage (V)	Package
			FBGA
MB86978	Inline Ipsec processing, DES / 3DES, AES, HMAC - SHA-1, HMAC-MD5, SA:64, IPv6, 10 / 100M MAC	3.3 ± 0.3 1.8 ± 0.15	337P 288P

Package: P - Plastic

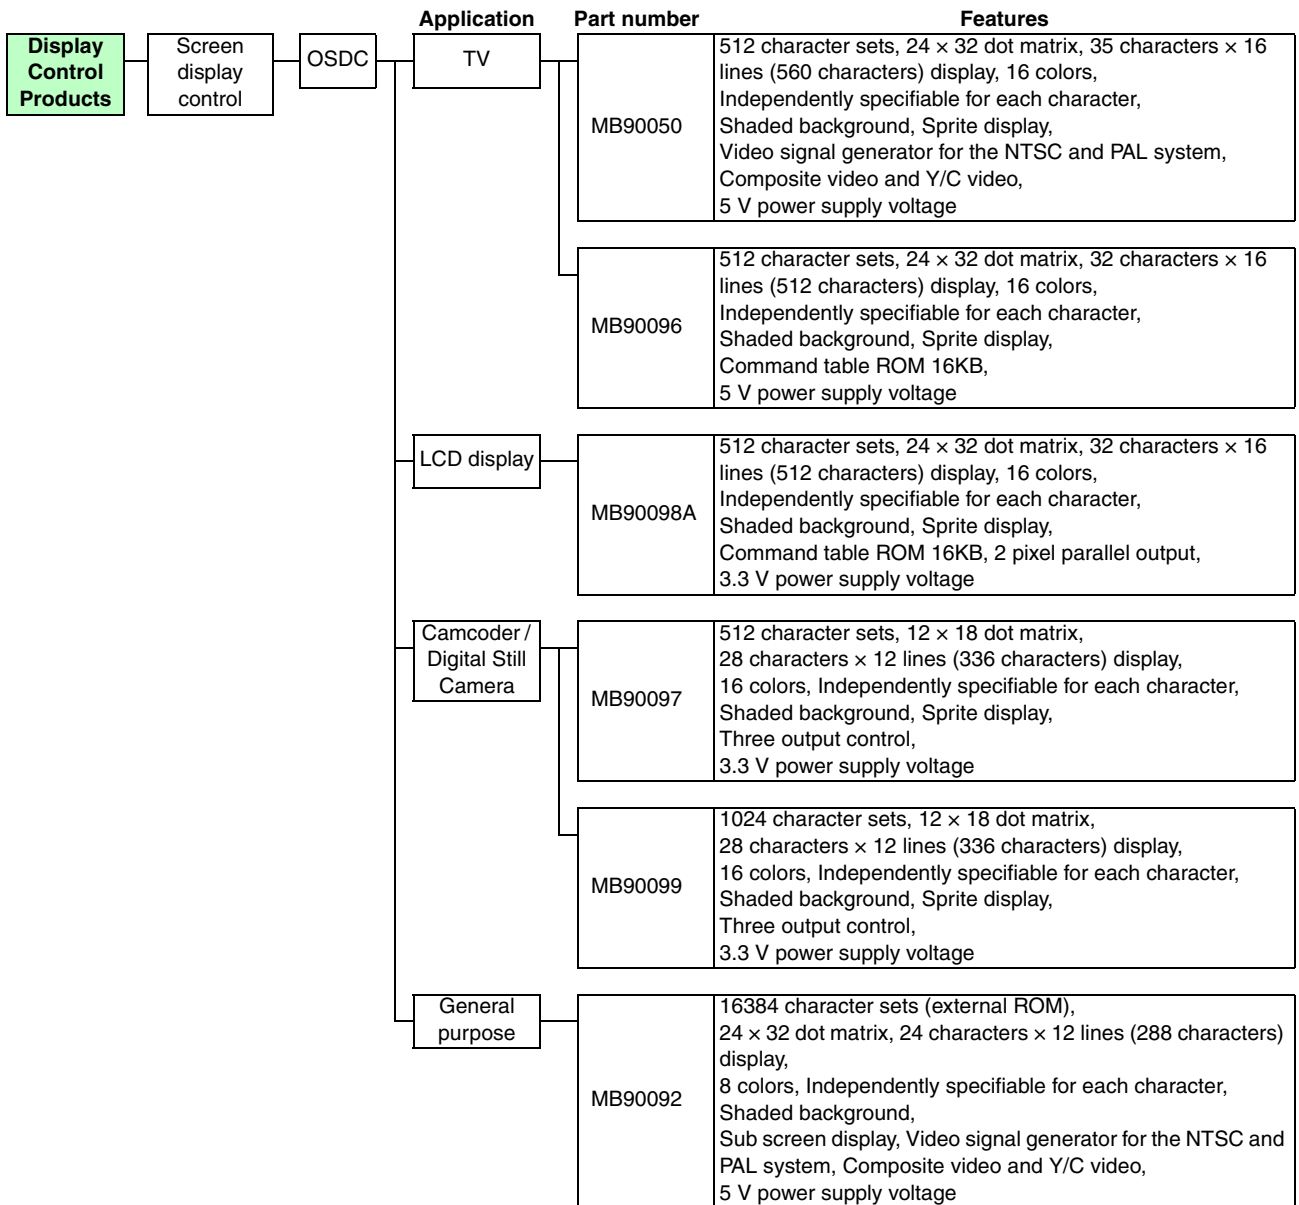

## Communication Network

### LAN

Part number	Functions	Communication standard	Power supply voltage (V)	Package
				LQFP
MB86967	10BASE-T Ethernet controller with PC card interface, ISA bus interface and General purpose bus interface	Conforms to IEEE 802.3	+5 ± 5%	100P

Note: Ethernet is a registered trademark of XEROX Corporation of the USA. Package: P - Plastic

# Demodulator Products/ISDB-T OFDM/Video Encoder, Decoder

	Application	Part number	Features
<b>Digital Demodulator</b>	Satellite	MB86667	Small 48 pin package High tolerance to spectrum distortion High and stability of reception Blind Scan support
	Cable	MB86668	Small 48 pin package High tolerance to spectrum distortion High and stability of reception
<b>ISDB-T OFDM</b>	1 segment	MB86A27S	Supports 1-segment part reception of Japan's terrestrial digital broadcasting (ISDB-T) 9 mW Target Power Supports WLP type (Target Size 2.994 mm × 3.336 mm × 0.49 mm)
		MB86A27T	Supports 1-segment part reception of Japan's terrestrial digital broadcasting (ISDB-T) 9 mW Target Power Supports solder bump type (Target Size 2.9 mm × 2.9 mm × 0.30 mm)
	13 segment	MB86A20S	Supports Japan's terrestrial digital broadcasting (ISDB-T) 9 mW Target Power Supports QFP 64 pin type (Package Size 7 × 7 mm) and WLP type (Target Size 0.686 mm × 5.36 mm)
		MB86A21	Japanese Digital Terrestrial broadcasting standard(ISDB-T) compliant Demodulator LSI. Enhanced version of MB86A20S. Power consumption 80mW, I/Q input support
<b>Video Encoder, Decoder</b>	Codec	MB86H55	Full HD H.264 Codec. Small package, Low power.
		MB86H56	Full HD/60p H.264 Codec. Small package, Low power.
	Transcoder	MB86H52	Full HD MPEG-2 to H.264 Transcoder. H.264 Codec is embedded.
		MB86H57 MB86H58	Full HD MPEG-2/H.264 bi-directional Transcoder for digital broadcast application such as PVR, PC. Low power. Supports small package (MB86H57).
	Decoder	MB86H60	MPEG-2/H.264 HD multi Decoder for STB of European HD broadcast.
		MB86H01	MPEG-2/H.264 SD multi Decoder for STB of Russian, Eastern European, Chinese SD broadcast. Low power(MB86H01BA). Small package(MB86H01BB).

# Demodulator Products/ISDB-T OFDM/Video Encoder, Decoder

## Demodulator Products

Satellite

Part number	Function	Power supply voltage (V)	Package	
			QFP	
MB86667	QPSK demodulator DVB-S and DSS support	1.65 to 1.95 3.0 to 3.6	48P	

Cable

Part number	Function	Power supply voltage (V)	Package	
			QFP	
MB86668	QAM demodulator DVB-C support	1.65 to 1.95 3.0 to 3.6	48P	

Package: P - Plastic

## ISDB-T OFDM

1 Segment

Part number	Function	Power supply voltage (V)	Package	
			Solder Bump	WLP
MB86A27S	1 segment OFDM demodulator ISDB-T supports	1.2 (internal, analog) 1.8 to 2.8 (I/O), 2.8 (analog)	-	42pin
MB86A27T	1 segment OFDM demodulator ISDB-T supports	1.2 (internal, analog) 1.8 to 2.8 (I/O), 2.8 (analog)	48pin	-

13 Segment

Part number	Function	Power supply voltage (V)	Package	
			LQFP	WLP
MB86A20S	13 segment OFDM demodulator ISDB-T supports	1.2 (internal, analog) 3.3 (I/O), 3.3 (analog)	64P	58P
MB86A21	13 segment OFDM demodulator ISDB-T supports	1.2 (internal, analog) 3.3 (I/O), 3.3 (analog)	64P	-

Package: P - Plastic

## Video Encoder, Decoder

Codec

Part number	Function	Power consumption (mW)	Memory	Package	
				FBGA	
MB86H55	H.264 HP Level4.0 Codec Various Audio Codec	500	1piece 512Mbit FCRAM is embedded	650pin 15mm × 15mm	
MB86H56	H.264 HP Level4.2 Codec 1920x1080/60 supports Various Audio Codec	700			

Transcoder

Part number	Function	Power consumption (W)	Memory	Package	
				FBGA	PBGA
MB86H52	MPEG-2 to H.264 HD Transcode H.264 HP Level4.0 Codec Various Audio Codec	1.7	2 pieces 512Mbit DDR2-667	-	496pin 27mm × 27mm
MB86H57	MPEG-2/H.264 bi-directional Transcode Audio Transcode	1.0	1 piece 512Mbit FCRAM is embedded	650pin 15mm × 15mm	-
MB86H58	H.264 HP Level4.0 Encode MPEG-2 MP@ML Encode Various Audio Codec MULTI2 decryption is embedded			-	496pin 27mm × 27mm

Decoder

Part number	Function	Power consumption (W)	Memory	Package	
				FBGA	PBGA
MB86H60	ARM1176JZF-S(324MHz) MPEG-2 MP@HL Decode H.264 HP Level 4 Decode Various Audio Decode DVB descrambler is embedded	1.2	2 pieces 16bit DDR2-SDRAM 667MHz (256Mbit to 1Gbit)	-	484pin 27mm × 27mm
MB86H01BA	ARC Tangent-A4(202.5MHz) MPEG-2 MP@ML Decode	0.53 (with DAC) 0.31 (W/O DAC)	1 piece 16bit DDR-SDRAM 135MHz (128Mbit to 512Mbit)	-	256pin 27mm × 27mm
MB86H01BB	H.264 MP Level 3 Decode MPEG-1/2 Layer I/II Audio Decode DVB descrambler is embedded			240pin 10mm × 10mm	-

ASSP

# Power Management Applications

Power Management Applications		Oscillator frequencies (kHz)	Error amplifiers	Part number	Features
AC/DC converters	Number of Channels	300	Operational amplifier type	MB3759	Push-pull, Single-end function switchable, TL494-equivalent
		700	Operational amplifier type	MB3769A	MOS FET compatible, Dynamic over-current detection
General purpose DC/DC converters	1	200	Operational amplifier type	MB3789A	Adaptable for external CLK synchronization, Two internal error amplifiers, Soft-start, Timer-latch type short circuit protection
		500	Operational amplifier type	MB3817	Soft-start, Timer-latch type short circuit protection
				MB3885	N/N synchronous rectification, Over voltage protection, Soft-start, Timer-latch type short circuit protection
		780	Comparator	MB39A130A	Fast response, Bottom detection comparator, N/N synchronous rectification, Soft-start, Discharge circuit, Overvoltage protection, Under voltage protection, Overcurrent protection, Over temperature protection, POWERGOOD circuit
		1000	Fixed gain type	MB3800	Low voltage operation,, Soft-start, Timer-latch type short circuit protection
			Operational amplifier type	MB39A135	Selectable fixed PWM mode or automatic PFM/PWM mode, N/N synchronous rectification, Current mode type, Over voltage protection, Over current detection, Over temperature protection, Soft-start/stop
	2	500	Fixed gain type	MB3775	Open collector, Timer-latch type short circuit protection
			Operational amplifier type	MB3778	Open collector, Timer-latch type short circuit protection
		MB3882	Operational amplifier type	MB3882	N/N synchronous rectification, Over voltage protection, Soft-start, Timer-latch type short circuit protection
				MB3889	N/N synchronous rectification, Timer-latch type over voltage protection , Timer-latch type over current protection, POWERGOOD circuit, Symmetrical-Phase method, Soft-start/stop
				MB39A106	N/N synchronous rectification, Boot strap diode, Timer-latch type over voltage protection , Timer-latch type over current protection, POWERGOOD circuit, Soft-start/stop, Symmetrical-Phase method
		MB39A116A	Operational amplifier type	MB39A116A	N/N synchronous rectification, Boot strap diode, Over voltage protection, Timer-latch type over current protection , POWERGOOD circuit, Soft-start/stop, Symmetrical-Phase method
MB39A138				Fast response, Bottom detection comparator, N/N synchronous rectification, Soft-start, Discharge circuit, Overvoltage protection, Under voltage protection, Overcurrent protection, Over temperature protection, Boot strap diode	
1000		Operational amplifier type	MB39A136	Selectable fixed PWM mode or automatic PFM/PWM mode, N/N synchronous rectification, Current mode type, Over voltage protection , Over current detection, Over temperature protection, Soft-start/stop, Symmetrical-Phase method	
1500		Operational amplifier type	MB39A104	Soft-start, Timer-latch type short circuit protection , Timer-latch type over current protection	
2000		Operational amplifier type	MB39C011A	P/N synchronous rectification (P-ch. asynchronous rectification) , Soft-start, Timer-latch type short circuit protection, Symmetrical-Phase method

ASIC Products	Standard cell	CMOS	CS302 series	with on-chip RAM, ROM, ADC/DAC	64
			CS201 series	with on-chip RAM, ROM, ADC/DAC	64
			CS101 series	More than 91,000,000 (on-chip) gates with on-chip RAM, ROM, ADC/DAC	65
			CS91 series	More than 48,000,000 (on-chip) gates with on-chip RAM, ROM, Multipliers, ADC/DAC	66
			CS86 series	More than 40,000,000 (on-chip) gates with on-chip RAM, ROM, FIFO, Delay Line, ADC/DAC	67
			CS81 series	More than 40,000,000 (on-chip) gates, 11 ps/gate with on-chip RAM, ROM, Multipliers, ADC/DAC	68
			CS66 series	More than 1,700,000 (on-chip) gates, 98 ps/gate with on-chip RAM, ROM, Multipliers, ADC/DAC	69
	Macro-embedded type cell arrays	CMOS	CE81 series	Maximum of 34,000,000 (on chip) gates, 12 ps/gate with on-chip RAM, ROM, Multipliers, ADC/DAC	71
			CE77 series	Maximum of 10,000,000 (on chip) gates, 33 ps/gate with on-chip RAM, ROM, FIFO, Delay Line	72
			CE71 series	Maximum of 8,096,000 (on chip) gates, 29 ps/gate with on-chip RAM, ROM, Multipliers, ADC/DAC	74
			CE66 series	Maximum of 1,138,000 (on-chip) gates, 98 ps/gate with on-chip RAM, ROM, Multipliers, ADC/DAC.	76
			CE61 series	Maximum of 2,025,000 (on chip) gates, 85 ps/gate with on-chip RAM/ROM, Multipliers, ADC/DAC	78
	Gate arrays	Sea-of-Gate CMOS	CG61 series	Maximum of 1,568,000 (on chip) gates, 85 ps/gate with on-chip RAM, Analog PLL embedment is possible in some frames	80
			CG47 series	Maximum of 55,000 (on chip) gates, 300 ps/gate with on-chip RAM, FIFO	82
			CG46 series	Maximum of 198,000 (on chip) gates, 300 ps/gate with on-chip RAM, FIFO	83

# Standard Cell

## ■ CS302 Series

### Features

Technology : 40 nm Si-gate CMOS  
: Maximum 11-metal layers. Extreme Low-K (ultra low permittivity) material is used for dielectric inter-layers.  
: Three different types of core transistors (low leak, standard and high speed) can be used on the same chip.

Supply voltage : +1.1V ± 0.1V

Junction temperature range : -40 °C to +125 °C

Support various cell sets (from low power versions to high speed versions)

It supports energy-saving mode, multi mode SRAM.

Compiled cells (RAM, ROM, others)

Support low-consumption technology

Support ultra high speed (up to 10 Gbps) interface macros

Special interfaces (LVDS, SSTL, others)

Supports boundary SCAN

Supports use of industry standard libraries

Supports use of industry standard tools.

Short-term development using a physical prototyping tool.

One pass design using a physical synthesis tools.

Hierarchical design environment for supporting large-scale circuits.

Supports Signal Integrity, EMI noise reduction

Supports static timing sign-off

Improve timing convergence by using Statistical Static Timing Analysis (SSTA).

Design For Manufacturing (DFM) enables stable product-supply and reduced variation

Package lineup : FBGA, PBGA, TEBGA, FC-BGA

Note : Some items are in preparation.

## ■ CS201 Series

### Features

Technology : 65 nm Si-gate CMOS  
6 to 12 layers of metal wiring. Ultra Low-K (low permittivity) material is used for dielectric inter-layers.  
Three different types of core transistors (low leak, standard and high speed) can be used on the same chip.

Supply voltage : +0.9V to +1.3V (A wide range is supported.)

Junction temperature range : -40 °C to +125 °C

Reduced chip sized realized by I/O with pad.

Supports a wide range of cell sets (from low power versions to high speed versions)

IP macros : CPU (ARM11, ARM9, ARM7TDMI), DSP, PCI, IEEE1394, USB, IrDA, PLL, ADC, DAC, and others

Compiled cells (RAM/ROM and others)

It supports energy-saving mode, multi mode SRAM.

It supports energy-saving technology "CoolAdjust"

Supports large capacity memory (1T-SRAM-Q)

High-speed interface macro (up to 10 Gbps)

Special interfaces (LVDS, SSTL and others)

Supports use of industry standard libraries (. LIB)

Uses industry standard tools and supports the optimum tools for the application.

High reliability design estimation in the early stage of physical design realized by physical prototyping tool.

Layout synthesis with optimized timing realized by physical synthesis tools.

Hierarchical design environment for supporting large-scale circuits.

High accuracy design environment considering dynamic drop in power supply voltages, signal noise, delay penalty, and crosstalk.

I/O design environment (power line design, assignment and selection of I/Os, package selection) considering noise.

Supports static timing sign-off

Improved timing settling by introducing Statistical Timing Analysis (SSTA).

Steady product supply and countermeasure for diffusion by introduction of DFM

Supports memory (RAM/ROM) BIST

Supports boundary SCAN

Supports LOGIC BIST

Supports transition delay test

Package lineup : TEBGA, FBGA, PBGA, FC-BGA

\*: "CoolAdjust" is a generic name of Fujitsu Microelectronics's energy-saving technology

Note: Some items are in preparation.

## ■ CS101 Series

### Features

- Optimum gate count : Maximum of 91,000,000 gates
- Technology : 90 nm Si-gate CMOS
  - 6 to 10 layers of metal wiring. Low-K (low permittivity) material is used for all dielectric inter-layers.
  - Three different types of core transistors (low leak, standard, and high speed) can be used on the same chip.
- Supply voltage : +0.9V to +1.3V (A wide range is supported.)
- Junction temperature range : -40 °C to +125 °C
- Gate delay time : tpd = 12 ps (1.2 V, Inverter, F/O = 1)
- Gate power consumption : Pd = 2.7 nW/MHz/BC (1.2 V, Inverter, F/O = 1)
- Reduced chip sized realized by I/O with pad.
- Supports a wide range of cell sets (from low power versions to high speed versions)
- Compliance with industry standard design rules enables non-Fujitsu commercial macros to be easily incorporated.
- IP macros : CPU (ARM9, ARM7TDMI) , DSP, PCI, IEEE1394, USB, IrDA, PLL, ADC, DAC, and others
- Compiled cells (RAM/ROM and others)
- High-speed interface macro (up to 10 Gbps)
- Special interfaces (LVDS, SSTL\_2 and others)
- Supports use of industry standard libraries (. LIB)
- Uses industry standard tools and supports the optimum tools for the application.
- High reliability design estimation in the early stage of physical design realized by physical prototyping tool.
- Layout synthesis with optimized timing realized by physical synthesis tools.
- Hierarchical design environment for supporting large-scale circuits.
- High accuracy design environment considering drop in power supply voltages, signal noise, delay penalty, and crosstalk.
- I/O design environment (power line design, assignment and selection of I/Os, package selection) considering noise.
- Supports static timing sign-off
- Supports memory (RAM/ROM) BIST
- Supports boundary SCAN
- Supports LOGIC BIST
- Supports transition delay test

Package lineup : TEBGA, FBGA, PBGA, FC-BGA

Note: Some items are in preparation.

# Standard Cell

## ■ CS91 Series

### Features

Optimum gate count : Maximum of 48,000,000 gates  
Technology : 0.11  $\mu\text{m}$  Si-gate CMOS, 5- to 8-layer wiring (Copper is used as wire material) ,  
Low-k Inter-layer material  
(Inter-layer material that has low permittivity)

Supports 8 types of cell sets that differ in speed, integration, and power consumption.

These cell sets can be mixed on a chip.

Supply voltage : +1.2 V  $\pm$  0.1 V

Junction temperature range : -40 to +125  $^{\circ}\text{C}$

Gate delay time :  $t_{pd} = 16$  ps (1.2 V, Inverter, F/O = 1)

Gate power consumption :  $P_d = 6.6$  nW/MHz (1.2 V, Inverter, F/O = 1)

High-speed interface macro (up to 10 Gbps)

Special interfaces: P-CML, LVDS, PCI, USB, SSTL, HSTL, T-LVTTL, and others

Buffer cells for crystal oscillation circuits.

IP macros : CPU (ARM9, ARM7TDMI) , DSP, PCI, IEEE1394, USB, IrDA, PLL, ADC, DAC, and others

Compiled cells (RAM/ROM/multiplier and others)

Uses industry standard tools and supports the optimum tools for the application.

Short-term development using a physical prototyping tool.

Hierarchical design environment for supporting large-scale circuits.

Supports Signal Integrity, EMI noise reduction

Supports High resolution RC extraction base delay calculation environment

Supports optimization environment of power supply wire

Supports static timing sign-off

Supports memory (RAM/ROM) BIST

Supports boundary SCAN

Supports LOGIC BIST

Supports transition delay test

Package lineup : FC-BGA (Max. 2116 pin), EBGA, HQFP, FBGA and others

Note: Some items are in preparation.

## CS86 Series

### Features

- Optimum gate count : Maximum of 40,000,000 gates
- Technology : 0.18  $\mu$ m Si-gate CMOS, 5- to 6-layer wiring
  - Supports three types of internal cell sets (ultra high-speed, standard, low-leak)
  - Capable of integrating a mixture of standard transistor cell and ultra high-speed process/cell, and mixture of standard transistor cell and low leak process/cell on a single chip
- Supply voltage : +1.8 V  $\pm$  0.15V to +1.1V  $\pm$  0.1V
- Gate delay time : tpd = 88 ps (standard : 1.8 V, 2NAND, F/O = 2, standard load)  
 tpd = 70 ps (ultra high-speed : 1.8 V, 2NAND, F/O = 2, standard load)  
 tpd = 136 ps (low-leak : 1.8 V, 2NAND, F/O = 2, standard load)
- Leakage Current : 0.023 nW (standard : 1.8 V, 2NAND, F/O = 0, no load)  
 3.922 nW (ultra high-speed : 1.8 V, 2NAND, F/O = 0, no load)  
 0.0067 nW (low-leak : 1.8 V, 2NAND, F/O = 0, no load)
- Gate power consumption : 40.1 nW/MHz (standard : 1.8 V, 2NAND, F/O = 1, 4Grid)  
 42.7 nW/MHz (ultra high-speed : 1.8 V, 2NAND, F/O = 1, 4Grid)  
 38.3 nW/MHz (low-leak : 1.8 V, 2NAND, F/O = 1, 4Grid)
- Junction temperature range : -40 to +125  $^{\circ}$ C
- Output buffer cells with noise reduction circuits
- Inputs with on-chip input pull-up/pull-down resistors and bidirectional buffer cells.
- Buffer cells for crystal oscillation circuits.
- Special interfaces : SSTL2, PCI, P-CML, T-LVTTL, USB2.0, IEEE1394, and others
- IP macros : CPU (FR-V, ARM9, and others), DSP, PCI, IEEE1394, USB2.0, IrDA, PLL, ADC, DAC, and others
- Compiled cells (RAM/ROM/FIFO/Delay line, and others)
- Configurable internal bus circuits
- Advanced for hardware/software co-design environment
- Short-term development using a physical synthesis tool
- Low-power dissipation using a low power synthesis tool
- Short-term development using a timing driven layout tool
- Hierarchical design environment for supporting large-scale circuits
- Supports signal Integrity
- Supports memory (RAM, ROM) SCAN
- Supports memory (RAM) BIST
- Supports boundary SCAN
- Supports path delay test
- Supports transition delay test
- Package lineup : QFP, LQFP, HQFP, FBGA

## Packages

The table below lists the available package types.

Type	Pin Count	Material
QFP	208, 240	Plastics
LQFP	144, 176, 208, 256	Plastics
HQFP	208, 240, 256, 304	Plastics
FBGA	112, 144, 176, 192, 224, 272, 288, 240, 304, 368	Plastics

Note: Contact Fujitsu Microelectronics for the availability.

# Standard Cell

## ■ CS81 Series

### Features

Optimum gate count : Maximum of 40,000,000 gates  
Technology : 0.18  $\mu\text{m}$  Si-gate CMOS, 4- to 6-layer wiring  
Capable of integrating a mixture of high-speed processes and cells on a single chip  
Supply voltage : +1.8 V  $\pm$  0.15V to +1.1V  $\pm$  0.1V  
Gate delay time : tpd = 11 ps (1.8 V, Inverter, F/O = 1)  
Gate power consumption : 5nW/MHz/BC (1.1V, 2NAND, F/O = 1)  
Junction temperature range : -40 to +125 °C  
High-speed interface macro (up to 3.125 Gbps)  
Output buffer cells with noise reduction circuits  
Inputs with on-chip input pull-up/pull-down resistors (33 k $\Omega$  typical) and bidirectional buffer cells.  
Buffer cells for crystal oscillation circuits.  
Special interfaces: P-CML, LVDS, PCI, AGP, USB, SDRAM-I/F, SSTL, and others  
IP macros: CPU, DSP, PCI, IEEE1394, USB, IrDA, PLL, ADC, DAC, and others  
Compiled cells (RAM/ROM/multiplier, and others)  
Configurable internal bus circuits  
Advanced for hardware/software co-design environment  
Short-term development using a timing driven layout tool  
Supports static timing sign-off  
Dramatically reducing the time for generating test vectors for timing verification and the simulation time  
Hierarchical design environment for supporting large-scale circuits  
Simulation (before layout) considering the input through rate and high resolution RC extraction base delay calculation (after layout), supporting development with minimized timing trouble after trial manufacture.  
Supports signal Integrity, EMI noise reduction  
Supports memory (RAM, ROM) SCAN  
Supports memory (RAM) BIST  
Supports boundary SCAN  
Supports At-Speed test on internal circuits  
Supports path delay test  
Supports transition delay test  
Package lineup : HQFP, LQFP, FBGA, FC-BGA

## Packages

The table below lists the available package types.

Type	Pin Count	Material
HQFP	208, 240, 256, 304	Plastics
LQFP	144, 176, 208	Plastics
FBGA	112, 133, 176, 192, 224, 240, 272, 288, 304, 368	Plastics
FC-BGA	1089, 1225, 1369, 1681, 1849, 2116	Plastics, Ceramic

Note: Contact Fujitsu Microelectronics for the availability.

## ■ CS66 Series

### Features

- Optimum gate count : Maximum of 1,700,000 gates
- Technology : 0.35  $\mu\text{m}$  Si-gate, 3- to 4-layer metal wiring
- Supply voltage : +3.3 V  $\pm$  0.3 V to +2.0 V  $\pm$  0.1 V
  - +5.0 V  $\pm$  10% (only for external interface; when internal requirements is 3.3 V)
  - +3.3 V  $\pm$  10% (only for external interface; when internal requirements is 3.3 to 2.0 V)
- Gate delay time :  $t_{pd} = 91$  ps (high-speed type, F/O = 2, standard load)
- Gate power consumption : 0.29  $\mu\text{W}/\text{MHz}$  (F/O = 2, standard load)
- Junction temperature range : -40 to +125°C
- High-load driving capability :  $I_{OL} = 2$  mA/4mA/8mA/12mA/24mA mixable.
- Output buffer cells with noise reduction circuits
- On-chip input pull-up/pull-down resistors (50 k $\Omega$  typical)
- Buffer cells for crystal oscillation circuits.
- Configurable internal bus circuits
- Highly integrated RAM/ROM/multipliers mountable; arbitrary words/bits configurable.
- Clock skew layout design method (Cadence "CT-Gen") based on the floor plan information minimizes post-layout circuit modification, reducing turnaround time for development.
- Simulation (before layout) considering the input through rate and detailed RC delay calculation (after layout), supporting development with minimized timing trouble after trial manufacture.
- Special interface (T-LVTTL and SDRAM-I/F, and others)
- Analog PLL
- Analog circuits (ADC, DAC, OPAMP and others)
- Macros for system ASICs (CPU core, CPU peripheral, operation macro, and others)
- Supports DFF scan test with MUX
- Supports memory (RAM/ROM) scan
- Supports memory (RAM) BIST
- Supports boundary SCAN

# Standard Cell

## Number of gates used in each package

The table below lists the available package types and the reference number of gates used.

### CS66 (P-frame)

# Macro-Embedded Type Cell Arrays

## ■ CE81 Series

### Features

- High Integration : Maximum of 34,000,000 BCs
- Technology : 0.18 μm Si-gate CMOS, 4- to 6\*1 -layer wiring
- Supply voltage : +1.8 V ± 0.15 V to +1.1 V ± 0.1 V
- Gate delay time : tpd = 12 ps (1.8V, Inverter, F/O = 1)
- Gate power consumption : 8nW/MHz/BC (1.1V, 2NAND, F/O = 1)
- Junction temperature range : -40 to +125 °C
- Output buffer cells with noise reduction circuits
- Inputs with on-chip input pull-up/pull-down resistors (33 kΩ typical) and bidirectional buffer cells.
- Buffer cells for crystal oscillation circuits.
- Special interfaces: P-CML, LVDS, PCI, AGP, USB, SDRAM-I/F, SSTL, and others
- IP macros: CPU, DSP, PCI, IEEE1394, USB, IrDA, PLL, ADC, DAC, and others
- Compiled cells (RAM/ROM/multipliers, and others)
- Configurable internal bus circuits
- Advanced for hardware/software co-design environment
- Short-term development using a timing driven layout tool
- Supports static timing sign-off
- Dramatically reducing the time for generating test vectors for timing verification and the simulation time.
- Hierarchical design environment for supporting large-scale circuits
- Supports optimization environment of power supply wire
- Simulation (before layout) considering of the input through rate and high resolution RC extraction base delay calculation (after layout), supporting development with minimized timing trouble after trial manufacture.
- Supports Signal Integrity
- Supports memory (RAM, ROM) SCAN
- Supports memory (RAM) BIST
- Supports boundary SCAN
- Supports At-Speed test on internal circuits
- Supports path delay test
- Supports transition delay test
- Package lineup : HQFP, FBGA, LQFP
- Note: Some items are in preparation.

\*1: The 6-layer of the CE81 is dedicated for power supply (care required).

### Number of gates used in package

## ■ CE77 Series

### Features

- High integration : Maximum of 10,000,000 BCs
- Technology : 0.25  $\mu\text{m}$  Si-gate CMOS, 3- to 4-layer wiring
- Supply voltage : +2.5 V  $\pm$  0.2 V to +1.5 V  $\pm$  0.1 V
- Junction temperature range : -40 to +125°C
- Gate delay time :  $t_{pd} = 33$  ps (2.5 V, Inverter, F/O = 1, No load)
- Gate power consumption : 0.02  $\mu\text{W}/\text{MHz}$  (1.5 V, Inverter, F/O = 1, No load)
- High-load driving capability :  $I_{OL} = 2\text{mA}/4\text{mA}/8\text{mA}/12\text{mA}$  mixable.
- Output buffer cells with noise reduction circuits
- Inputs with on-chip input pull-up/pull-down resistors (25 k $\Omega$  typical) and bidirectional buffer cells.
- Buffer cells for crystal oscillation circuits.
- Special interfaces (P-CML, LVDS, T-LVTTL, SSTL, PCI, USB, GTL+, and others)
- IP macros (CPU, PCI, USB, IrDA, PLL, DAC, ADC, and others)
- Compiled cells (RAM/ROM/FIFO/Delay Line, and others)
- Configurable internal bus circuits
- Advanced for hardware/software co-design environment
- Short-term development using a timing driven layout tool
- Hierarchical design environment for supporting large-scale circuits
- Supports static timing sign-off
- Dramatically reducing the time for generating test vectors for timing verification and the simulation time.
- Simulation (before layout) considering the input through rate and detailed RC delay calculation (after layout), supporting development with minimized timing trouble after trial manufacture.
- Supports memory (RAM, ROM) SCAN
- Supports memory (RAM) BIST
- Supports boundary SCAN
- Supports path delay test
- Package lineup : SQFP, LQFP, HQFP, FBGA, PBGA

# Macro-Embedded Type Cell Arrays

## ■ CE71 Series

### Features

- High integration : Maximum of 8,000,000 BCs
- Technology : 0.25  $\mu\text{m}$  Si-gate CMOS, 3- to 4-layer metal wiring
- Supply voltage : +2.5 V  $\pm$  0.2 V to +1.5 V  $\pm$  0.1 V  
(5 V TTL interface is available if 5 V tolerant I/O is adopted. Some frames are under development.)
- Gate delay time :  $t_{pd} = 29$  ps (2.5 V, Inverter, F/O = 1, No load)
- Gate power consumption : 0.060  $\mu\text{W}/\text{MHz}$  (F/O = 1, No load)
- Junction temperature range : -40 to +125°C
- High-load driving capability :  $I_{OL} = 2$  mA/4 mA/8 mA/12 mA mixable.
- Output buffer cells with noise reduction circuits
- Inputs with on-chip input pull-up/pull-down resistors (25 k $\Omega$  typical) and bidirectional buffer cells.
- Buffer cells for crystal oscillation circuits.
- Special interfaces (P-CML, LVDS, SDRAM-I/F, SSTL, and others)
- IP macros (SPARClike, FR40, F<sup>2</sup>MC16LX, PCI, IEEE1394, USB, IrDA, PLL, ADC/DAC, and others)
- Compiled cells (RAM/ROM/multipliers, and others)
- Configurable internal bus circuits
- Advanced for hardware/software co-design environment
- Linking floor plan tools and logic synthesis tools allows automatic optimization of the circuits using the floor plan information. The Clock Driven Design Method (CDDM) clock tree synthesis tools using the floor plan information are also available. Using the floor plan information in the pre-layout stage would eliminate the problems of setup after layout or timing problems for hold, significantly reducing the time to market.
- Supports the static timing sign off using the Synopsys CAD tool Prime Time. This contributes to the considerable reduction of time required for test vector creation for timing verification and the simulation time.
- Simulation (before layout) considering the input through rate and detailed RC delay calculation (after layout), supporting development with minimized timing trouble after trial manufacture.
- Supports memory (RAM, ROM) SCAN
- Supports memory (RAM) BIST
- Supports boundary SCAN
- Package lineup : SQFP, LQFP, HQFP, PBGA, FBGA

# Macro-Embedded Type Cell Arrays

## ■ CE61 Series

### Features

- High Integration Technology : Maximum of 2,000,000 BCs  
: 0.35  $\mu\text{m}$  Si-gate 3-layer metal wiring/4-layer metal wiring  
(There are restrictions applicable frames)
- Basic circuit (basic cell) : 2-input NAND/2-input NOR gates
- Supply voltage : +3.3 V  $\pm$  0.3 V to +2.0 V  $\pm$  0.1 V  
High voltage tolerant transistor for I/O; interface provided for 5 V devices  
(Also requiring a 5 V power supply for interface with 5 V devices)
- Gate delay time : High-speed type,  $t_{pd} = 85$  ps (2-input NAND, F/O = 2, standard load)
- Junction temperature range : 0 to +100°C
- High-load driving capability :  $I_{OL} = 2$  mA/4 mA/8 mA/12 mA/24 mA mixable.
- Power consumption : Reduced to 50% to 20% (over the CE51 Series)
- Output buffer cells with noise reduction circuits
- On-chip input pull-up/pull-down resistors (Typ. 50k $\Omega$ )
- Buffer cells for crystal oscillation circuits.
- Configurable internal bus circuits
- Super high-integration RAM and ROM available. Compilable bit/word configuration
- Clock skew reduction layout design technique (CDDM) employed to minimize circuit modification after layout, reducing TAT
- Simulation (before layout) considering the input through rate and detailed RC delay calculation (after layout), supports development with minimized timing trouble after trial manufacture.
- Supports high speed interfaces [P-CML (200 MHz transmission), LVDS (250 MHz transmission), and SDRAM I/F, PCI, 5 V tolerant, USB, IEEE 1284]
- PLL circuits
- Analog circuits (ADC, DAC)
- Macros for system ASICs (CPU core and CPU peripheral and operational macros, and others)
- Supports tests (for function/DC) using DFF scan with MUX
- Supports the test for RAM BIST, RAM SCAN and ROM SCAN
- Supports the Boundary SCAN
- Now under preparation on for a narrow-pitch pad technology and high-pin count BGA packages to be added to the current lineup
- Variety of package options to optimize any gate size

# Sea-of-Gate Type CMOS Gate Arrays

## ■ CG61 Series (Analog PLL embedment is possible in some frames)

### Features

- High Integration : 1,560,000 BCs
- Technology : 0.35  $\mu\text{m}$  Si-gate CMOS, 3-layer metal wiring
- Basic circuit (basic cell) : 2-input NAND/2-input NOR gates
- Supply voltage : +3.3 V  $\pm$  0.3 V to +2.0 V  $\pm$  0.1 V  
(5 V TTL interface is possible when 5 V tolerant I/Os are used.)
- Gate delay time :  $t_{pd} = 85$  ps (3.3 V, 2-input NAND, F/O = 2, standard load)
- Gate power dissipation : 0.24  $\mu\text{W}/\text{MHz}$  (2.0 V, 2-input NAND, F/O = 2, standard load)
- Junction temperature range : 0 to +100  $^{\circ}\text{C}$
- High-load driving capability :  $I_{OL} = 2$  mA/4 mA/8 mA/12 mA/24 mA mixable
- Output buffer cells with noise reduction circuits
- On-chip input pull-up/pull-down resistors (Typ. 50 k $\Omega$  <at 3.3 V>)
- Buffer cells for crystal oscillation circuits
- Configurable internal bus circuits
- Compiled RAM can be embedded. Compilable bit/word configuration
- An analog PLL can be embedded in CG61P only.
- Clock skew reduction layout design technique (CDDM) employed to minimize circuit modification after layout, reducing TAT
- Simulation (before layout) considering the input through rate and detailed RC delay calculation (after layout), supports development with minimized timing trouble after trial manufacture.
- Supports high speed interfaces (T-LVTTL, P-CML, LVDS, SDRAM I/F)
- Supports tests using DFF scan with MUX
- Supports the test for RAM BIST and RAM SCAN

# Sea-of-Gate Type CMOS Gate Arrays

## ■ CG47 Series

### Features

High integration : Maximum 55,000 BCs (on chip)  
 Technology : 0.65 μm Si-gate CMOS, 2-layer metal wiring  
 Gate delay time : 300ps (power type 2-input NAND, standard load)  
 Supply voltage : +5 V ± 5%, +3.3 V ± 0.3 V  
 [Dual power supply] Internal domain: +3.3 V ± 0.3 V, +5 V ± 5% (cannot be mixed)  
 I/O: +3.3 V ± 0.3 V, +5 V ± 5% (can be mixed)

Interface enabled between dual power sources

Low power consumption enabled by operating internal supply voltage at 3.3V.

Delay time estimation by detailed time equations

Detailed time equations can be used for the estimation of delay time closer to that of actual devices.

Buffer cells for crystal oscillations circuits

Supports separate low frequency (32 kHz), and high frequency (1 to 40MHz) buffers, and oscillator stop function.

Supports output open drain cell and input fail safe cells

Compiled cells include single port RAM, dual port RAM, and FIFO memory.

Note: The type of the RAM that can be used is specified depending on the internal power supply when the RAM is a single-port RAM.

HISCAN (scan circuit automatic generation function)

HISCAN is supported with single power supply, but dual power supply specifications and HISCAN are mutually exclusive.

Simple interface

CAD-to-CAD interface uses special language for logic data (FLDL) and test data (FTDL).

Integrated development tools

# Sea-of-Gate Type CMOS Gate Arrays

## ■ CG46 Series

### Features

- High integration : Maximum 198,084 BCs (on chip)
- Technology : 0.65  $\mu\text{m}$  Si-gate CMOS, 2-layer metal wiring
- Basic circuit (basic cell) : 2-input NAND/2-input NOR gates
- Input level : TTL/CMOS level mixable
- Supply voltage : +5 V  $\pm$  5%  
+3.3 V  $\pm$  0.3 V (optional)
- Gate delay time : Standard gate tpd = 360 ps (2-input NAND, standard load)  
Power gate tpd = 300 ps (2-input NAND, standard load)
- Operating temperature : 0 to +70°C
- High-load driving capability :  $I_{OL} = 3.2 \text{ mA}/8 \text{ mA}/12 \text{ mA}/24 \text{ mA}$  mixable
- Output buffer cells with noise reduction circuits
- On-chip input pull-up/pull-down resistors (Typ. 50 k $\Omega$ )
- Buffer cells for crystal oscillations circuits
- Configurable internal bus circuits
- RAM and FIFO memory allowing arbitrary bit/word configuration
- Clock skew reduction layout design technique (CDDM) employed to minimize circuit modification after layout, reducing the period of time for development
- Detailed RC delay calculation minimized timing trouble after trial manufacture.
- Supports ATG (Automatic Test Generation) based on scan design
- Supports HISCAN (automatic scan generation)
- Simplified interface: CAD-to-CAD interface uses special language for logic data (FLDL) and test data (FTDL) .
- Integrated development tools

### Number of gates used in each package

The table below lists the available package types and the reference number of gates used.

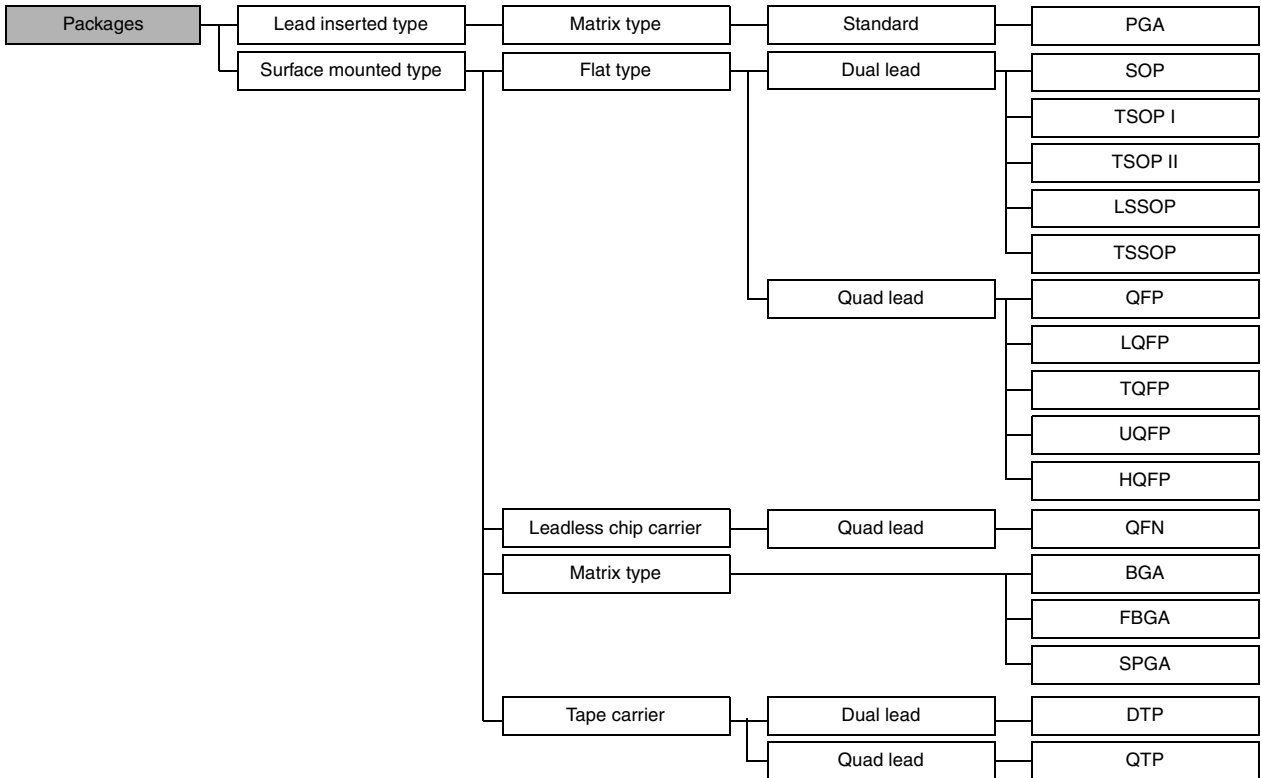

Package and pin count		Number of gates used (BC)										
		0	10K	20K	30K	40K	50K	60K	70K	80K	90K	100K
LQFP	48	_____ 10K										
	64	_____ 42K										
	80	_____ 42K										
	100	_____ 65K										
	120	_____ 65K										
	144	_____ 50K										
	176	_____ 50K										
QFP	208	_____ 50K										
	240	_____ 50K										

ASIC

# Package Line-up

## ■ Package Line-up

The packages are classified as follows, according to form, material, and the mounting methods for which they are suited.

# Package Line-up

Name of package	Description	Lead pitch (mm)
PGA	Pin Grid Array Package	1.27/2.54
SOP	Small Outline Package (straight lead) Small Outline L-Leaded Package	1.27
SOL <sup>*2</sup>	Small Outline L-Leaded Package (JEDEC <sup>*1</sup> )	1.27
SSOP	Shrink Small Outline L-Leaded Package	0.65/0.80/1.00
TSOP (I)	Thin Small Outline L-Leaded Package (I)	0.50/0.55/0.60
TSOP (II)	Thin Small Outline L-Leaded Package (II)	0.50/0.80/1.00/1.27
SON	Small Outline Non-Leaded Package	0.50/1.00
QFP	Quad Flat Package (straight lead) Quad Flat L-Leaded Package	0.40/0.50/0.65/0.80/1.00
LQFP <sup>*2</sup>	Low-Profile Quad Flat L-Leaded Package	0.40/0.50/0.65/0.80
TQFP	Thin Quad Flat L-Leaded Package	0.40/0.50
HQFP	QFP with Heat Sink	0.40/0.50/0.65
LCC <sup>*2</sup>	Leadless Chip Carrier	1.016/1.27
QFN	Quad Flat Non-Leaded Package	
BGA	Ball Grid Array	1.27/1.0
FBGA	Fine pitch Ball Grid Array	0.8/0.75/0.65/0.5
DTP	Dual Tape Carrier Package	—
QTP	Quad Tape Carrier Package	—

\*1: Joint Electron Device Engineering Council

\*2: Package name used by Fujitsu Microelectronics

All Rights Reserved.

The contents of this document are subject to change without notice.

Customers are advised to consult with sales representatives before ordering.

The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of FUJITSU MICROELECTRONICS device; FUJITSU MICROELECTRONICS does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information.

FUJITSU MICROELECTRONICS assumes no liability for any damages whatsoever arising out of the use of the information.

Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of FUJITSU MICROELECTRONICS or any third party or does FUJITSU MICROELECTRONICS warrant non-infringement of any third-party's intellectual property right or other right by using such information. FUJITSU MICROELECTRONICS assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that FUJITSU MICROELECTRONICS will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

Exportation/release of any products described in this document may require necessary procedures in accordance with the regulations of the Foreign Exchange and Foreign Trade Control Law of Japan and/or US export control laws.

The company names and brand names herein are the trademarks or registered trademarks of their respective owners.
