SPT Series

Low Cost, Stainless Steel Media Isolated Pressure Sensors

DESCRIPTION

Honeywell's SPT Series stainless steel pressure sensors are designed for media that will not adversely attack 316L stainless steel.

The back side metal tube is made from 304 stainless steel which provides effective protection against most harsh environments. The SPT Series is calibrated and compensated for three styles of output: 4.0 mA to 20.0 mA (mA version); 1.0 Vdc to 5.0 Vdc (4 V version); and 0 mV to 100 mV (mV version).

All versions feature a variety of pressure connections to allow use in a wide range of OEM (Original Equipment Manufacturer) equipment.

The SPT Series stainless steel devices are rugged and reliable transducers for use in a wide variety of pressure sensing applications where corrosive liquids and gases are monitored.

Notes

- 1. Vacuum gage units (V option) allow you to pull a hard vacuum on the gage units. Vacuum gage parts are only available on the mV version in 15 psig through 500 psig. As sold, this package design is not submersible. In order to make the package submersible, the package needs to be sealed.
- 2. The maximum pressure that can be applied without changing the transducer's performance or accuracy.
- 3. The maximum pressure that can be applied to a transducer without rupture of either the sensing element or transducer case.

Notes:

- 1. Reference conditions (unless otherwise noted): $T_A = 25$ °C [77 °F]; For SPTmA and SPT4V, Supply $V_S = 23.5$ Vdc ± 0.01 Vdc; for SPTmV:
- $V_s = 10 \text{ Vdc}$. 2. Full-scale span (FSS) is the algebraic difference between the output voltage at full-scale positive pressure and the output at zero pressure. FSS
- Full-scale span (FSS) is the algebraic difference between the output voltage at full-scale positive pressure and the output at zero pressure. FSS is ratiometric to the supply voltage.
 Pressure non-linearity is based on best-fit straight line from zero to the full-scale pressure. Pressure hysteresis is the maximum output difference at any point within the operating pressure range for increasing and decreasing pressure.
 Maximum error band of the offset voltage or span over the compensated temperature range, relative to the 25 °C [77 °F] reading.
 Long-term stability over a six-month period.
 Response time for a 0 psi to FSS pressure step change, 10% to 90% rise time.
 Common mode voltage as measure from output to ground.
