

XW4H/XW4K/XW4L

PCB Terminal Blocks: Push-in SMT Terminals with 2.54mm Pitch

Push-in Terminals to Easily Complete Connections. PCB Terminal Blocks with 2.54mm Pitch.

- Push-in connection method allows repeated repairs.
- Hold-down structure for strength on PCBs.
- Active lock mechanism for superior vibration and shock resistance.
- Both vertical and horizontal models available.
- Suction cover included to enable automatic mounting. (XW4K/XW4L vertical models)
- Can be mounted to the back surfaces of PCBs.
- Small reel are available. (XW4K/XW4L only)

Features

- Just insert solid wires or ferrules to complete wiring. With Stranded wires, all you need is a flat-blade screwdriver.

- Hold-downs are provided on both ends to achieve robust mounting by increasing solder mounting strength.
 - The hold-downs are circled in red.

- An active lock mechanism prevents the Terminal Blocks from coming off to provide superior vibration and shock resistance.

Ratings and Specifications

| | |
|------------------------------|--|
| Rated voltage | 160 VAC |
| Rated current * | 6 A |
| Dielectric strength | 1,400 V for 1 min |
| Insulation resistance | 1,000 M Ω min. |
| Wire stripping length | 6 mm |
| Operating temperature | -40 to 125°C (with no condensation or icing) |

* This is the maximum value for the connector.
If the rated current of the cable is lower than the rated current of the connector, use the rated current of the cable.

Materials and Finishes

| | |
|-----------------|-------------------------|
| Housing | LCP/Black |
| Contacts | Copper alloy/tin plated |
| Spring | SUS |

Applicable Wires

| | |
|-----------------------|------------------------------|
| Solid wires | 0.14 to 0.5 mm ² |
| Stranded wires | 0.2 to 0.5 mm ² |
| Ferrules | 0.25 to 0.34 mm ² |
| AWG | 26 to 20 |

|----------|------------------------------------|
| XW4Z-00A | 1 |

Safety Precautions

Precautions for Correct Use

● Soldering Conditions

- Recommended Reflow Conditions
Maximum temperature: 255°C
Time: Within 20 s

These conditions depend on the type of solder, the manufacturer, the amount of solder, the size of the circuit board, and the other mounting materials. You must check and select the actual conditions yourself.

● Metal Mask Thickness for Cream Solder Printing

We recommend a metal mask thickness of 0.12 to 0.15 mm for cream solder printing.

These conditions, however, depend on the type of solder, the manufacturer, the amount of solder, the size of the circuit board, and the other mounting materials. You must check and select the actual conditions.

● Pin Deformation

The pins will deform if you subject them to an excessive load. Deformed pins will reduce solderability when the Connectors are mounted. Do not drop the Connectors or handle them roughly. Do not connect or disconnect Connectors that are not mounted to a circuit board. Doing so may deform the pins.

XW4H, XW4L

● Wiring Terminal Blocks

Directly Connecting Wires

- (1) Use wires with conductors that are within the connectible wire range.
- (2) Prepare the ends of the wires as shown below.
Refer to Ratings and Specifications for the wire stripping length.

- (3) Do not presolder the ends of the wires. Doing so will prevent correct connections.

● Connection Methods

Using Ferrules or Solid Wire

Connection Method

Just press the ferrule all the way in.

Removal Method

Insert the screwdriver into the release hole and pull out the ferrule.

Using Stranded Wires

Using Stranded Wires

To insert a stranded wire, insert a screwdriver into the release hole and then insert the wire.
To remove a stranded wire, insert a screwdriver into the release hole and then pull out the wire.

Note: Do not apply excessive force to the Terminal Block when you insert the tool. The Terminal Block may be damaged.

● Terminal Block Connection Method

Using Crimp Terminals

- (1) Use ferrules or tab terminals.
However, the Terminal Blocks are small, so sufficiently confirm the following before you use them.
- (2) Insulation between Crimp Terminals
If you use naked crimp terminals, there will be no finger protection. Also, there will be limited clearance and creepage distances between adjacent terminals, so use crimp terminals with care.

● Special Screwdriver for Terminal Blocks

Use the XW4Z-00A Special Screwdriver to connect the Terminal Blocks.

You can also use any screwdriver with the following dimensions. If you use any screwdriver other than the Special Screwdriver or one with the following dimensions, the Terminal Block may be damaged.

• Application examples provided in this document are for reference only. In actual applications, confirm equipment functions and safety before using the product.
• Consult your OMRON representative before using the product under conditions which are not described in the manual or applying the product to nuclear control systems, railroad systems, aviation systems, vehicles, combustion systems, medical equipment, amusement machines, safety equipment, and other systems or equipment that may have a serious influence on lives and property if used improperly. Make sure that the ratings and performance characteristics of the product provide a margin of safety for the system or equipment, and be sure to provide the system or equipment with double safety mechanisms.

Note: Do not use this document to operate the Unit.
