

**FEATURES**

Ultralow jitter digital PLL  
4:1 multiplexed HDMI receiver  
HDMI 1.3a support  
36-/30-/24-bit deep color support  
Flexible audio interface (DSD, DST,  
Dolby® TrueHD, DTS®-HD master audio, and DTS-HD  
high resolution audio)  
225 MHz HDMI receiver  
HDMI repeater support  
High-bandwidth digital content protection (HDCP 1.3)  
Programmable/adaptive equalizer for cable lengths up to  
30 meters  
Internal EDID RAM  
EDID with HDMI cable power support  
CEC support  
On-board audio mute controller

**General**  
Highly flexible output interface  
12-/10-/8-bit 4:4:4 or 12-/10-/8-bit 4:2:2 pixel output interface  
STDI function support standard identification  
Any-to-any 3 × 3 color space conversion matrixes  
Free-run time generator  
2 programmable interrupt request output pins  
Color controls  
Low standby power

**APPLICATIONS**

Advanced TVs  
AVR video receivers  
PDP HDTVs  
LCD TVs (HDTV ready)  
OLED HDTVs  
LCD/DLP front projectors  
HDMI switchers

**GENERAL DESCRIPTION**

The **ADV7614** is a high quality, single-chip integrated 4:1 multiplexed High-Definition Multimedia Interface (HDMI®) receiver.

The **ADV7614** incorporates a quad input HDMI receiver that supports all HDTV formats up to 1080p and displays resolutions up to UXGA (1600 × 1200 at 60 Hz). The reception of encrypted video is possible with the inclusion of HDCP. The HDMI receiver also includes programmable/adaptive equalization that ensures robust operation of the interface with cable lengths up to 30 meters.

The **ADV7614** provides complete audio support for eight channels of I<sup>2</sup>S audio, Sony/Philips digital interface format (S/PDIF) digital audio output, and super audio CD (SACD) and compressed SACD support with direct stream digital (DSD) and direct stream transfer (DST) output interfaces, respectively. The HDMI receiver also supports high bit rate (HBR) audio streaming to allow recovery (and downstream processing) of compressed lossless audio formats, including Dolby® TrueHD and DTS®-HD master audio or DTS-HD high resolution audio. In addition, it also provides an advanced audio functionality, such as a mute controller that prevents audible extraneous noise in the audio output.

Fabricated in an advanced CMOS process, the **ADV7614** is provided in a space-saving, 260-ball 15 mm × 15 mm CSP\_BGA surface-mount, RoHS-compliant package. The **ADV7614** is specified over the -40°C to +70°C temperature range.

Storage Temperature	150°C
Infrared Reflow Soldering (20 sec)	260°C

<sup>1</sup> The following inputs are 3.3 V inputs but are 5 V tolerant: DDCA\_SCL, DDCA\_SDA, DDCB\_SCL, DDCB\_SDA, DDCC\_SCL, DDCC\_SDA, DDCD\_SCL, DDCD\_SDA, RXA\_5V, RXB\_5V, RXC\_5V, RXD\_5V, SHARED\_EDID, PWRDN, EP\_MISO.

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## PACKAGE THERMAL PERFORMANCE

To reduce power consumption when using the ADV7614, the user is advised to turn off unused sections of the part.

Due to printed circuit board (PCB) metal variation and, thus, variation in PCB heat conductivity, the value of  $\theta_{JA}$  may differ for various PCBs.

The most efficient measurement solution is obtained using the package surface temperature to estimate the die temperature because this eliminates the variance associated with the  $\theta_{JA}$  value.

The maximum junction temperature ( $T_{J\text{ MAX}}$ ) of 125°C must not be exceeded. The following equation calculates the junction temperature using the measured package surface temperature and applies only when no heat sink is used on the device under test (DUT):

$$T_J = T_S + (\Psi_{JT} \times W_{TOTAL})$$

where:

$T_S$  is the package surface temperature (°C).

$\Psi_{JT} = 0.3^\circ\text{C}/\text{W}$  for a 260-ball CSP\_BGA.

$$W_{TOTAL} = ((PVDD \times I_{PVDD}) + (0.05 \times TVDD \times I_{TVDD}) + (CVDD \times I_{CVDD}) + (DVDD \times I_{DVDD}) + (DVDDIO \times I_{DVDDIO})).$$

Note that for  $W_{TOTAL}$ , 5% of TVDD power is dissipated on the part itself.

## ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

## FUNCTIONAL OVERVIEW

### HDMI RECEIVER

The HDMI receiver on the [ADV7614](#) incorporates active equalization of the HDMI data signals. This equalization compensates for the high frequency losses inherent in HDMI and DVI cabling, especially at longer lengths and higher frequencies. The equalization is programmable. It is capable of equalizing for cable lengths up to 30 meters to achieve robust receiver performance at even the highest HDMI data rates. The HDMI receiver supports all HDTV formats up to 1080p and all display resolutions up to UXGA (1600 × 1200 at 60 Hz).

With the inclusion of HDCP, displays can receive encrypted video content. The HDMI interface of the [ADV7614](#) allows for authentication of a video receiver, decryption of encoded data at the receiver, and renewability of that authentication during transmission as specified by the HDCP 1.3 protocol.

The HDMI receiver offers advanced audio functionality. It supports multichannel I<sup>2</sup>S audio for up to eight channels. It also supports a six-DSD channel interface with each channel carrying an oversampled 1-bit representation of the audio signal as delivered on SACD. It incorporates a DST interface that outputs audio data decoded from DST audio packets. The [ADV7614](#) can also receive HBR audio packet streams and outputs them through the HBR interface in an S/PDIF format conforming to the IEC60958 standard. It supports multichannel I<sup>2</sup>S audio for up to eight channels. The receiver also contains an audio mute controller that can detect a variety of conditions that may result in audible extraneous noise in the audio output. On detection of these conditions, the audio data can be ramped to prevent audio clicks or pops.

### COMPONENT PROCESSOR (CP)

The video standards supported by the CP are 525i, 625i, 525p, 625p, 720p, 1080i, 1080p, 1250i, VGA up to UXGA at 60 Hz, and many other standards.

Automatic adjustments within the CP include gain (contrast) and offset (brightness); manual adjustment controls are also supported.

A fully programmable any-to-any 3 × 3 color space conversion (CSC) matrix is placed between the HDMI processor and the CP section. This enables YCrCb-to-RGB and YCrCb-to-RGB conversions. Many other standards of color space can be implemented using the color space converter.

### CP PIXEL DATA OUTPUT MODES

The output section of the CP is highly flexible. It can be configured in an SDR mode with one data packet per clock cycle or in a DDR mode where data is presented on the rising and falling edge of the clock. In SDR mode, a 16-/20-/24-bit 4:2:2 or 24-/30-/36-bit 4:4:4 output is possible. In these modes, the HS, VS, FIELD, and DE (where applicable) timing reference signals are provided. In DDR mode, the [ADV7614](#) can be configured in an 8-/10-/12-bit 4:2:2 YCrCb or 12-bit 4:4:4 RGB/YCrCb pixel output interface with corresponding timing signals.

### I<sup>2</sup>C INTERFACE

The [ADV7614](#) supports a 2-wire serial (I<sup>2</sup>C-compatible) microprocessor bus driving multiple peripherals. The [ADV7614](#) is controlled by an external I<sup>2</sup>C master device, such as a microcontroller.

### OTHER FEATURES

In addition to HS, VS, and FIELD output signals with programmable position, polarity, and width, the [ADV7614](#) provides the following:

- Programmable interrupt request output pins: INT1 and INT2
- Low power consumption: 1.8 V digital core, 3.3 V digital input/output, low power power-down mode, and green PC mode
- 15 mm × 15 mm, RoHS-compliant BGA package
