## Luckylight

# 5mm Round With Flange Type Hyper Red LED <br> Technical Data Sheet 

## Part No.: 583VC2C-V1-4DA

## Luckylight

## Features:

$\diamond$ Standard T-1 3/4 package.
$\diamond$ Bulk, Available on tape and reel.
$\diamond$ Viewing angle $=10^{\circ}$.
$\diamond$ High efficiency.
$\diamond$ Reliable and robust.
$\diamond$ The product itself will remain within RoHS compliant Version.

## Descriptions:

$\diamond$ The series is specially designed for applications requiring higher brightness.
$\diamond$ The LED lamps are available with different colors, intensities.

## Applications:

$\diamond$ TV set.
$\diamond$ Monitor.
$\diamond$ Telephone.
$\diamond$ Computer.
$\diamond$ Circuit board.
$\diamond$ Status indicators.
$\diamond$ Commercial use.
$\diamond$ Advertising Signs.
$\diamond$ Back lighting.

| Part No. | Chip Material | Lens Color | Source Color |
| :---: | :---: | :---: | :---: |
| 583VC2C-V1-4DA | AIGaInP | Water Clear | Hyper Red |

Notes:

1. All dimensions are in millimeters (inches).
2. Tolerance is $\pm 0.25 \mathrm{~mm}\left(.010^{\prime \prime}\right)$ unless otherwise noted.
3. Protruded resin under flange is 1.00 mm (.039") max.
4. Specifications are subject to change without notice.

| Reverse Current | IR | --- | --- | 10 | $\mu \mathrm{~A}$ | $\mathrm{~V}_{\mathrm{R}}=5 \mathrm{~V}$ |

## Notes:

1. Luminous Intensity Measurement allowance is $\pm 10 \%$.
2. $\theta_{1 / 2}$ is the off-axis angle at which the luminous intensity is half the axial luminous intensity.
3. The dominant wavelength ( $\lambda \mathrm{d}$ ) is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device.

## Reliability Test Items And Conditions:

The reliability of products shall be satisfied with items listed below:
Confidence level: 90\%.
LTPD: 10\%.

1) Test Items and Results:

| Test Item | Standard Test Method | Test Conditions | Note | Number of Damaged |
| :---: | :---: | :---: | :---: | :---: |

## Please read the following notes before using the product:

## 1. Over-current-proof

Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change (Burn out will happen).
2. Storage
2.1 Do not open moisture proof bag before the products are ready to use.
2.2 Before opening the package, the LEDs should be kept at $30^{\circ} \mathrm{C}$ or less and $80 \%$ RH or less.
2.3 The LEDs should be used within a year.
2.4 After opening the package, the LEDs should be kept at $30^{\circ} \mathrm{C}$ or less and $60 \%$ RH or less.
2.5 The LEDs should be used within 168 hours (7 days) after opening the package.
3. Soldering Iron

Each terminal is to go to the tip of soldering iron temperature less than $260^{\circ} \mathrm{C}$ for 5 seconds within once in less than the soldering iron capacity 25 W . Leave two seconds and more intervals, and do soldering of each terminal. Be careful because the damage of the product is often started at the time of the hand solder.

## 4. Soldering

When soldering, for Lamp without stopper type and must be leave a minimum of 3 mm clearance from the base of the lens to the soldering point.
To avoided the Epoxy climb up on lead frame and was impact to non-soldering problem, dipping the lens into the solder must be avoided.
Do not apply any external stress to the lead frame during soldering while the LED is at high temperature.
Recommended soldering conditions:

| Soldering Iron |  | Wave Soldering |  |
| :--- | :--- | :--- | :--- |
| Temperature | $300^{\circ} \mathrm{C}$ Max. | Pre-heat | $100^{\circ} \mathrm{C}$ Max. |
| Soldering Time | 3 sec. Max. | Pre-heat Time | 60 sec. Max. |
|  | (one time only) | Solder Wave | $260^{\circ} \mathrm{C}$ Max. |
|  |  | Soldering Time | 5 sec. Max. |

Note: Excessive soldering temperature and / or time might result in deformation of the LED lens or catastrophic failure of the LED.

## 5. Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used. It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.

## 6. Caution in ESD

Static Electricity and surge damages the LED. It is recommended to use a wrist band or anti-electrostatic glove when handling the LED. All devices equipment and machinery must be properly grounded.
