Sealed Subminiature Basic Switch

## Sealed Basic Switch with Simplified Construction， Mounting Compatible with SS and D2SW Series．

－Rubber packing construction keeps dust off and offers temporary waterproofing protection（IEC IP67）．
－Switch rating of 2 A at 250 VAC possible with a single－leaf movable spring．Models for micro loads are also available．
－Solder，quick－connect terminals（\＃110），PCB terminals，and molded lead wires are available．
UL，CSA，VDE safety standard approved models are available upon request．

RoHS Compliant

## Model Number Legend

| D2SW－P 1234 |  |

## Contact Form

eSPDT

- SPST-NC (Molded lead wire models only)

SPST-NO (Molded lead wire models only)

The color in parentheses indicates the color of the lead wire.

Contact Specifications

| Item | Model | D2SW-P2 models | D2SW-P01 models |
| :--- | :--- | :---: | :---: |
| Contact | Specification | Rivet | Crossbar |
|  | Material | Silver | Gold alloy |
|  | Gap (Standard value) | 0.5 mm |  |
| Minimum applicable load <br> (reference value)* | 160 mA at 5 VDC | 1 mA at 5 VDC |  |

* Please refer to "OUsing Micro Loads" in "Precautions" for more information on the minimum applicable load.

Ratings

| Model | Rated voltage | Resistive load |
| :---: | :---: | :---: |
| D2SW-P2 models | 250 VAC | 2 A |
|  | 30 VDC |  |
| D2SW-P01 models | 125 VAC | 0.1 A |
|  | 30 VDC |  |

Note. The above rating values apply under the following test conditions.
(1) Ambient temperature: $20 \pm 2^{\circ} \mathrm{C}$
(2) Ambient humidity: $65 \pm 5 \%$
(3) Operating frequency: 20 operations $/ \mathrm{min}$

## Approved Safety Standards

The items shown in the "List of Models" are not standard approved models.
Consult your OMRON sales representative for specific models with standard approvals.

UL (UL1054/CSA C22.2 No.55)

| Rated voltage $\quad$ Model | D2SW-P2 | D2SW-P01 |
| :---: | :---: | :---: |
| 125 VAC | - | 0.1 A |
| 250 VAC | 2 A | - |
| 30 VDC | 2 A | 0.1 A |

VDE (EN61058-1)

| Rated voltage Model | D2SW-P2 | D2SW-P01 |
| :---: | :---: | :---: |
| 125 VAC | - | 0.1 A |
| 250 VAC | 2 A | - |
| 30 VDC | 2 A | 0.1 A |

Testing conditions: 5 E 4 ( 50,000 operations) $\mathrm{T} 55\left(0^{\circ} \mathrm{C}\right.$ to $\left.55^{\circ} \mathrm{C}\right)$

## Characteristics

| Item Model |  | D2SW-P2 models | D2SW-P01 models |
| :---: | :---: | :---: | :---: |
| Permissible operating speed |  | 0.1 mm to $500 \mathrm{~mm} / \mathrm{s}$ (for pin plunger models) |  |
| Permissible operating frequency | Mechanical | 120 operations/min |  |
|  | Electrical | 30 operations/min |  |
| Insulation resistance |  | $100 \mathrm{~m} \Omega \mathrm{~min}$. (500 VDC with insulation tester) |  |
| Contact resistance (initial value) | Terminal models | $50 \mathrm{~m} \Omega$ max. | $100 \mathrm{~m} \Omega$ max. |
|  | Molded lead wire models | $100 \mathrm{~m} \Omega$ max. | $150 \mathrm{~m} \Omega$ max. |
| Dielectric strength *1 | Between terminals of the same polarity | 1,000 VAC 50/60 Hz for 1 min | 600 VAC 50/60 Hz for 1 min |
|  | Between current-carrying metal parts and ground | 1,500 VAC 50/60 Hz for 1 min |  |
|  | Between each terminals and non-current-carrying metal parts | 1,500 VAC $50 / 60 \mathrm{~Hz}$ for 1 min |  |
| Vibration resistance *2 | Malfunction | 10 to $55 \mathrm{~Hz}, 1.5-\mathrm{mm}$ double amplitude |  |
| Shock resistance | Destruction | $1,000 \mathrm{~m} / \mathrm{s}^{2}$ \{approx. 100G\} max. |  |
|  | Malfunction *2 | $300 \mathrm{~m} / \mathrm{s}^{2}$ \{approx. 30G\} max. |  |
| Durability *3 | Mechanical | 1,000,000 operations min. ( 60 operations/min) |  |
|  | Electrical | 50,000 operations min. (20 operations/min) | 200,000 operations min. (20 operations/min) |
| Degree of protection | Terminal models | IEC IP67 (excluding the terminals on terminal models) |  |
|  | Molded lead wire models | IEC IP67 |  |
| Degree of protection against electric shock |  | Class I |  |
| Proof tracking index (PTI) |  | 250 |  |
| Ambient operating temperature |  | $-20^{\circ} \mathrm{C}$ to $+70^{\circ} \mathrm{C}$ (at ambient humidity of $60 \%$ max.) (with no icing or condensation) |  |
| Ambient operating humidity |  | $85 \%$ max. (for +5 to $+35^{\circ} \mathrm{C}$ ) |  |
| Weight |  | Approx. 2 g (for pin plunger models with terminals) |  |

Note. The data given above are initial values.
*1. The dielectric strength shown in the table indicates values for models with a Separator.
*2. The values are at Free Position and Total Travel Position values for pin plunger, and Total Travel Position value for lever. Close or open circuit of contact is 1 ms max.
*3. For testing conditions, consult your OMRON sales representative.

## Terminals and Shapes (Unit: mm)

## -Solder terminals

## -PCB terminals

<PCB Mounting Dimensions (Reference)>

-Quick-connect terminals (\#110)

## -Molded lead wires

Mounting Holes (Unit: mm)
2-M2.3 screw holes

## Dimensions (Unit: mm) / Operating Characteristics

The illustrations and drawings are for solder terminal models.
Refer to "Terminals and Shapes" of previous page for details on models with quick-connect terminals (\#110) or PCB terminals or molded lead wires.
The $\square$ in the model number is for the contact form code or the terminal code. See the "List of Models" for available combinations of models.

## Precautions

^ Please refer to "Basic Switches Common Precautions" for correct use.

## Cautions

## -Degree of Protection

- Do not use this product in water.

Although this models satisfy the test conditions for the standard given below, this test is to check the ingress of water into the switch enclosure after submerging the Switch in water for a given time. Satisfying this test condition does not mean that the Switch can be used in water.

JIS C0920:
Degrees of protection provided by enclosures of electrical apparatus (IP Code)
IEC 60529:
Degrees of protection provided by enclosures (IP Code) Degree of protection: IP67
(check water intrusion after immersion for 30 min submerged 1 m underwater)

- Do not operate the Switch when it is exposed to water spray, or when water drops adhere to the Switch surface, or during sudden temperature changes, otherwise water may intrude into the interior of the Switch due to a suction effect.
- Prevent the Switch from coming into contact with oil and chemicals.
Otherwise, damage to or deterioration of Switch materials may result.
- Do not use the Switch in areas where it is exposed to silicon adhesives, oil, or grease, otherwise faulty contact may result due to the generation of silicon oxide.
- The environment-resistant performance of the switch differs depending on operating loads, ambient atmospheres, and installation conditions, etc. Please perform an operating test of the switch in advance under actual usage conditions.

## -Soldering

- Connecting to Solder Terminals When soldering the lead wire to the terminal, first insert the lead wire conductor through the terminal hole and then conduct soldering.
Complete the soldering at the iron tip temperature between 350 to $400^{\circ} \mathrm{C}$ within 3 seconds, and do not apply any external force for 1 minute after soldering. Soldering at a excessively high temperature or soldering for more than 3 s may deteriorate the characteristics of the Switch.
- Connecting to Quick-connect Terminals Wire the quick-connect terminals (\#110) with receptacles. Insert the terminals straight into the receptacles. Applying excessive external force laterally may cause deformation of terminals and may damage the housings.
- Connecting to PCB terminals

When using automatic soldering baths, we recommend soldering at $260 \pm 5^{\circ} \mathrm{C}$ within 5 seconds. Make sure that the liquid surface of the solder does not flow over the edge of the board.
When soldering terminals manually, complete the soldering at the iron tip temperature between 350 to $400^{\circ} \mathrm{C}$ within 3 seconds, and do not apply any external force for 1 minute after soldering. When applying solder, keep the solder away from the case of the Switch and do not allow solder or flux to flow into the case.

## -Side-actuated (Cam/Dog) Operation

- When using a cam or dog to operate the Switch, factors such as the operating speed, operating frequency, push-button indentation, and material and shape of the cam or dog will affect the durability of the Switch. Confirm performance specifications under actual operation conditions before using the Switch in applications.

## Correct Use

## -Mounting

- Turn OFF the power supply before mounting or removing the Switch, wiring, or performing maintenance or inspection. Failure to do so may result in electric shock or burning.
- Use M2.3 mounting screws with plane washers or spring washers to securely mount the Switch.
Tighten the screws to a torque of 0.23 to $0.26 \mathrm{~N} \cdot \mathrm{~m}\{2.3$ to $2.7 \mathrm{kgf} \cdot \mathrm{cm}\}$. Exceeding the specified torque may result in deterioration of the sealing or damage.

## -Operating Body

- Use an operating body with low frictional resistance and of a shape that will not interfere with the sealing rubber, otherwise the plunger may be damaged or the sealing may deteriorate. With the pin plunger models, set the Switch so that the plunger can be pushed in from directly above. Since the plunger is covered with a rubber cap, applying a force from lateral directions may cause damage to the plunger or reduction in the sealing capability. Since the plunger is covered with a rubber cap, applying a force from lateral directions may cause damage to the plunger or reduction in the sealing capability.

## -Handling

- Do not handle the Switch in a way that may cause damage to the sealing rubber.
- When handling the Switch, ensure that uneven pressure or, as shown in the following diagram, pressure in a direction other than the operating direction is not applied to the Actuator, otherwise the Actuator or Switch may be damaged, or durability may be decreased.

## -Wiring Molded Lead Wire Models

- When wiring molded lead wire models, ensure that there is no force applied on the wire or that there are no sharp bends near the parts where the wire is drawn out.
Otherwise, damage to the Switch or deterioration in the sealing may result.

## -Using Micro Loads

- Using a model for ordinary loads to open or close the contact of a micro load circuit may result in faulty contact. Use models that operate in the following range. However, even when using micro load models within the following operating range, if inrush current occurs when the contact is opened or closed, it may increase the contact wear and so decrease durability. Therefore, insert a contact protection circuit where necessary. The N -level reference value applies for the minimum applicable load. This value indicates the malfunction reference level for the reliability level of $60 \%\left(\lambda_{60}\right)$. (JIS C5003) The equation $\lambda_{60}=0.5 \times 10^{-6}$ /operations indicates that the estimated malfunction rate is less than $\frac{1}{2,000,000}$ operations with a reliability level of $60 \%$.

[^1]- Consult your OMRON representative before using the product under conditions which are not described in the manual or applying the product to nuclear control systems, railroad systems, aviation systems, vehicles, combustion systems, medical equipment, amusement machines, safety equipment, and other systems or equipment that may have a serious influence on lives and property if used improperly. Make sure that the ratings and performance characteristics of the product provide a margin of safety for the system or equipment, and be sure to provide the system or equipment with double safety mechanisms.

Note: Do not use this document to operate the Unit.
