

## General characteristics

This chapter explains the technical characteristics of the PLUSO series plugs and socket-outlets for industrial purposes.

The range of products covers a wide number of different installation requirements.

The plugs and socket-outlets are suitable for fixed or mobile installations. The fixed plugs and socket-outlets may be wall or flush-mounted.

Thanks to the wide range of the ILME enclosures of the FM, FC and BK series (types BC...) the flush-mounting plugs and socket-outlets can be assembled rapidly in a group configuration.

These construction features enable ILME plugs and socket-outlets to be suitable for use in the most demanding applications:

- the mechanical industry
- the shipbuilding industry
- the chemical and petrochemical industry
- the services sector
- the building industry
- the agricultural and livestock breeding sector

The following parameters must be considered when selecting the correct type of plugs and socket-outlets:

- rated current of the device to feed through plug and socket-outlet coupling;
- the rated voltage of the power supply and the type of distribution (single phase or three-phase, with or without the neutral conductor) to determine the number of poles for the hour position.  
The hour position "1h" is available for all those voltages or voltage ranges > 50V and for frequencies or ranges of frequencies not covered by the standards.
- The type of installation (fixed or mobile) to determine the construction type of the plug and socket (flush-mounting straight or inclined, wall, mobile, mobile angled).
- The location of the installation to determine the degree of protection required (IP44 or IP67) and the voltage (in some areas the installation standards require very low safety voltage).

The following types of plugs and socket-outlets are available:

- wall-mounting plugs and socket-outlets (low and extra-low voltage).
- plugs and socket-outlets and straight flush-mounting socket-outlets (low and extra-low voltage).
- plugs and inclined flush-mounting socket-outlets (low voltage)
- straight plugs and couplers (low and extra-low voltage).
- angled plugs (low voltage).
- 5-pole plugs with phase inverter (low voltage, SIP type).
- 5-pole single-block plugs and socket-outlets (low voltage, PEM type) for automated cabling.

## Electrical Features

### rated frequency:

0 Hz (direct current), and from 50 Hz to 500 Hz

### rated operating voltage:

the standard identifies two main types of use:

- extra-low voltage socket-outlets (and relative plugs), (SELV safety requirements, in accordance with the CEI 64-8 installation standard), for effective voltage values of up to 50V inclusive
- low voltage socket-outlets (and plugs) for effective voltage values of over 50V and up to 690V

### polarity:

the versions are designed with:

- 2 and 3 poles (extra-low voltage: 2P, 3P)
- 3, 4 and 5 poles (low voltage: 2P+⊕, 3P+⊕, 3P+N+⊕)

The 63A and 125A plugs and socket-outlets have an additional pilot contact.

### rated current:

with 16A, 32A, 63A and 125A values (low voltage)  
with 16A and 32A (extra-low voltage).

### rated insulation voltage:

- 690V for low voltage plugs and socket-outlets
- 50V for extra-low voltage plugs and socket-outlets
- minimum surface insulation distance:* 10 mm (EN 60309-1)
- minimum air insulation distance:* 8 mm (for rated operating voltages higher than 500V)

### breaking capacity:

1.25 times greater than the rated current value (test performed at a voltage of 1.1 times the operating voltage).

## Mechanical features

- **mechanical resistance**  
verified with the provisions of Article 24 of the EN 60309-1 standard (IEC 60309-1)
- **resistance to chemical agents**  
see Table on page 8
- **degree of protection**  
IP44 and IP67 according to EN 60529 (see information on page 7)
- **resistance to glow-wire**  
in accordance with standard IEC 60695 -1-2: for enclosures: 960 °C, 850 °C and 750 °C;  
for inserts: 960 °C
- **temperatures**  
ambient: -25 °C ÷ +40 °C; materials limit: -40 °C ÷ +125 °C
- **self-extinguishing capacity**  
classification UL 94:  
for enclosures **V2 e HB**;  
for 16A, 32A and 63A type inserts, **V2**;  
for types 125A, **5VA e VO**

## Materials

- enclosures and inserts in self-extinguishing insulating thermoplastic material
- anti-aging elastomer gaskets
- brass pins (nickel-plated for the 63A and 125A plugs and socket-outlets, on request for the 16A and 32A plugs and socket-outlets)
- self-centring brass contact tubes with zinc-plated steel spring
- zinc-plated steel assembly screws (stainless steel for the 63A and 125A socket-outlets)
- terminals with zinc-plated screws retained in their seats when unscrewed
- 32A, 63A and 125A plugs and socket-outlets with two fixing screws in the terminals as protection against accidental loss
- 63A and 125A plugs and socket-outlets terminals with zinc-plated steel plate for wire protection

## The supply package

### Plugs and socket-outlets are supplied with:

- anti-oil and anti-aging gaskets
- self-threading fixing screws

### The following is available on request:

- cable glands, gaskets, lock nuts and sealing plugs for wall-mounting plugs and socket-outlets
- FM, FC and BK (types BC...) ILME enclosures for flush-mounting plugs and socket-outlets

- Compliant with EN 60309-1 and -2
- Enclosure, insert and spring lid in insulating, thermoplastic, self-extinguishing material
- RAL 7035 grey enclosure, spring lid colour coded according to the operating voltage
- PE...PP types (IP44), spring lid, entry with threaded grommet (replaceable with a cable gland)
- PEW...PP types (IP67), spring lid with locking ring and gasket, entry with cable gland
- Terminals with retained screws
- 63A, 125A: with pilot contact
- Nickel-plated contacts, available on request for 16A and 32A (standard on 63A and 125A)\*\*
- 125A: with terminal block for the anchoring of incoming cables, already connected to socket
- IP44 and IP67 degree of protection (EN 60529)
- With Italian Quality Mark

**Legend**

A.V. = Colour according to voltage

(\*) Green may be used together with the colour of the operating range for frequencies above 60 Hz and up to a maximum of 500 Hz.

(\*\*) For the code of products with nickel-plated contacts (socket holes, plug pins), add "N" to the pre-code of the corresponding standard product code; for example: PE becomes PEN and PEW becomes PEWN.

**Legend**

A.V. = Colour according to voltage

(\*) Green may be used together with the colour of the operating range for frequencies above 60 Hz and up to a maximum of 500 Hz.

(\*\*) For the code of products with nickel-plated contacts (socket holes, plug pins), add "N" to the pre-code of the corresponding standard product code; for example: PE becomes PEN and PEW becomes PEWN.

- Compliant with EN 60309-1 and -2
- Enclosure, insert and locking ring in insulating, thermoplastic, self-extinguishing material
- PE...SM types (IP44), enclosure colour coded according to operating voltage, top entry with threaded grommet (replaceable with cable gland)
- PEW...SM types (IP67), RAL 7035 grey enclosure, locking ring with gasket colour coded according to operating voltage, top entry with cable gland
- Terminals with retained screws
- 63A, 125A: with pilot contact
- Nickel-plated contacts, available on request for 16A and 32A (standard on 63A and 125A)\*\*
- 125A: with terminal block for the anchoring of incoming cables, already connected to socket
- IP44 and IP67 degrees of protection (EN 60529)
- ® With Italian Quality Mark

**Legend**

A.V. = Colour according to voltage

(\*) Green may be used together with the colour of the operating range for frequencies above 60 Hz and up to a maximum of 500 Hz.

(\*\*) For the code of products with nickel-plated contacts (socket holes, plug pins), add "N" to the pre-code of the corresponding standard product code; for example: PE becomes PEN and PEW becomes PEWN.

Version

In PEM plugs and socket-outlets, the contact holding insert (main part) is incorporated in the front of the enclosure. In these versions, the screws of the 5 terminals are oriented in the same direction in order to simplify automated wiring. The grounding pin is longer at the rear to provide greater safety if the cable anchor breaks. As the wires in the multiple cable are generally cut at the same length, the longer grounding terminal ensures that the last wire to be detached from the terminal is the protective one (PE) if the cable anchor breaks.

### Version

SIP plugs incorporate a mechanical device that exchanges the position of the pins of phases L2 and L3 (phase inverter); this enables the phase cycles to be adapted to the required direction of rotation of three-phase motors. The device can be regulated on the contact side using a screwdriver without having to disassemble the plug.

Accessories for IP67 plugs (optional)

- Compliant with EN 60309-1 and -2
- Enclosure, insert and spring lid in insulating, thermoplastic, self-extinguishing material
- RAL 7035 grey enclosure
- Spring lid colour coded according to operating voltage and frequency
- Wall-mounting types PB...PP, top entry with threaded grommet (replaceable with cable gland)
- Flush-mounting types PB...PI, flange with anti-aging gasket
- Coupler types PB...PV, cable anchoring collar incorporated in the insert, entry with grommet
- Terminals with retained screws
- Nickel-plated contacts on request
- IP44 degree of protection (EN 60529)
- With Italian Quality Mark
