Easy Installation

No special tooling is required for installation. Just drill or punch a round hole in your panel and tighten the supplied nut. Ideal for single circuit applications where the connector must blend with existing instrumentation. Thermocouple circuits can be added to existing panels with only minimal interruption of operations. A choice of either square or round face is available to match the design lines of your installation. Thermocouple grade alloys used to form the contacts preserve the accuracy of the circuit even in changing ambient temperatures.

We make running changes when technical advances allow. Check at time of ordering for additional features.
