# Pin Description

## Power Supply

Pin Number	Symbol	Type	Function
8	VDD	P	<b>Power Supply for Logic Circuit</b> This is a voltage supply pin. It must be connected to external source.
7	VSS		<b>Ground of OEL System</b> This is a ground pin. It also acts as a reference for the logic pins. It must be connected to external ground.
14	VCC		<b>Power Supply for OEL Panel</b> This is the most positive voltage supply pin of the chip. It must be supplied externally.

## Driver

Pin Number	Symbol	Type	Function
12	IREF	I	<b>Current reference for Brightness Adjustment</b> This pin is segment current reference pin. A resistor should be connected between this pin and VSS. Set the current at 10 $\mu$ A maximum.
13	VCOMH	O	<b>Voltage Output High Level for COM Signal</b> This pin is the input pin for the voltage output high level for COM signals. A tantalum capacitor should be connected between this pin and VSS.

## DC/DC Converter

Pin Number	Symbol	Type	Function
5	VDDB	P	<b>Power Supply for DC/DC Converter Circuit</b> This is the power supply pin for the internal buffer of the DC/DC voltage converter. It must be connected to external source when the converter is used. It should be connected to VDD when the converter is not used.
3/4 1/2	C1P/C1N C2P/C2N	I	<b>Positive Terminal of the Flying Inverting Capacitor</b> <b>Negative Terminal of the Flying Boost Capacitor</b> The charge-pump capacitors are required between the terminals. They must be floated when the converter is not used.

### Interface

Pin Number	Symbol	Type	Function
9	RES#	I	<b>Power Reset for Controller and Driver</b> This pin is reset signal input. When the pin is low, initialization of the chip is executed. Keep this pin pull high during normal operation.
10	SCL		<b>I2C Bus Clock Signal</b> The transmission of information in the I2C bus is following a clock signal. Each transmission of data bit is taken place during a single clock period of this pin.
11	SDA	I/O	<b>I2C Bus Data Signal</b> This pin acts as a communication channel between the transmitter and the receiver.

### Reserve

Pin Number	Symbol	Type	Function
6	N.C.	-	<b>Reserved Pin</b> The N.C. pin between function pins is reserved for compatible and flexible design. It must be floated.
