\*1. Operating within the set distance enables high-speed responsiveness and a more stable repeat accuracy.

\*2. When used with a 12 V power source, the Sensor is less susceptible to the effects of internal heat generation. Therefore a more stable repeat accuracy can be obtained.

\*3. When the control output is 20 mA or less, the Sensor is less susceptible to the effects of internal heat generation. Therefore a more stable repeat accuracy can be obtained.

### Sensing distance vs. repeat accuracy graphs

By operating within the sensor installation distance, the repeat accuracy stabilizes.

This is reference data based on a standard sensing object, and is not a guarantee of performance.

The repeat accuracy varies depending on the effects of temperature, the material and surface condition of the sensing object, and other conditions.

## Connection to I/O Connector (Connector Models, Pre-wired Connector Models)

## Safety Precautions

Refer to *Warranty and Limitations of Liability*.

**⚠ WARNING**

This product is not designed or rated for ensuring safety of persons either directly or indirectly. Do not use it for such purposes.

**⚠ CAUTION**

- Do not short the load. Explosion or burning may result.
- Do not supply power to the Sensor with no load, otherwise Sensor may be damaged.

**Precautions for Correct Use**

Do not use this product under ambient conditions that exceed the ratings.

● **Design**

### Influence of Surrounding Metal

When mounting the Sensor within a metal panel, ensure that the clearances given in the following table are maintained. Failure to maintain these distances may cause deterioration in the performance of the Sensor.

**<Shielded Models>**

(Unit: mm)

Item	Size	3 dia.	4 dia.	6.5 dia.	M4	M5
L		0	0	0	0	0
m		3	5	6	3	5
d		3	4	6.5	4	5
D		0	0	0	0	0
n		8	10	12	8	10
c		0	0	2	0	0

**<Unshielded Models>**

(Unit: mm)

Item	Size	3 dia.	4 dia.	6.5 dia.	M4	M5
L		6	6	12	6	6
m		6	9	8	6	9
d		9	12	24	9	12
D		6	6	12	6	6
n		16	20	24	16	20

If mounted in a surrounding non-magnetic metal such as aluminum or copper, the sensing distance may shorten by about 40 to 50%. If used in a recessed installation, take into consideration the effects of the material on the sensing distance.

### Mutual Interference

When installing Sensors face-to-face or side-by-side, ensure that the minimum distances given in the following table are maintained.

**Mutual Interference**

## ● Mounting

### Tightening Force

#### 〈Mounting threaded models (E2E-S□)〉

Do not tighten the nut with excessive force.  
A washer must be used with the nut.

- Note:** 1. Only use the provided nut and toothed washer.  
Risk of changes in the sensing distance and damage if a different material is used. If you lose the nut or washer, purchase an optional nut set.  
2. The following strengths assume washers are being used.

Item	Size	M4		M5	
		Shielded	Unshielded	Shielded	Unshielded
Tr		0.8 N·m		1 N·m	

**Note:** Only use the provided nut.

Torque		0.2 N·m max.				0.4 N·m max.	

\* Excluding the operation indicator area.

When using a set screw, tighten it to the torque indicated in the table above.

## ● Oil resistance

In accordance with our oil resistance standard, we test oil resistance based on water insoluble oil (complies with test oil based on JIS C0920, Appendix 1).

When water soluble cutting oil is used, durability varies due to the dilution ratio and other factors.

Please test oil resistance using the actual oil that will be used.

## ● High-speed responsiveness

To obtain a better high-speed response, it is recommended that you use the sensor at about 50% of the possible sensing distance. A high-speed response may not be obtained with some sensing object surfaces, materials, and shapes, or when the sensing distance is greater than the set distance.

For the effects of materials, refer to *Engineering Data* on page 7.

## ● Repeated cable bending tolerance

If you require repeated bending tolerance, use the Connector Model together with a connector cable that is specified for bending tolerance.

Refer to *Sensor I/O Connector* on page 5.

## ● Protective Stainless-steel Spiral Tube

The spiral tube is in a fixed state and is intended to provide protection against wire breakage due to shock from tools or other objects.

If you require repeated bending tolerance, use the Connector Model together with a connector cable that is specified for bending tolerance.

Refer to *Sensor I/O Connector* on page 5.

## ● Block type mounting accessories

Due to differences in dimensional tolerances, these cannot be used with older small diameter proximity sensors. (E2E-CR6, E2E-CR8)

## ● Bending radius for mounting

If the cable is bent from its base, the resin on the surface of the cable may peel off, however, this will not affect the protective structure or sensing performance.

Avoid bending the cable at less than 10 mm from its base.

When bending the cable, refer to the table below.

Cable diameter	Bending radius
3 dia., M4	7 mm
4 dia., M5	9 mm
6.5 dia.	12 mm
