## F<sup>2</sup>MC-8FX MB95200H/210H Series

**MB95F204H/F204K/F203H/F203K/F202H/F202K**  
**MB95F214H/F214K/F213H/F213K/F212H/F212K**

### ■ DESCRIPTION

MB95200H/210H is a series of general-purpose, single-chip microcontrollers. In addition to a compact instruction set, the microcontrollers of this series contain a variety of peripheral resources.

Note: F<sup>2</sup>MC is the abbreviation of FUJITSU Flexible Microcontroller.

### ■ FEATURES

- F<sup>2</sup>MC-8FX CPU core  
Instruction set optimized for controllers
  - Multiplication and division instructions
  - 16-bit arithmetic operations
  - Bit test branch instructions
  - Bit manipulation instructions, etc.
- Clock (main OSC clock and sub-OSC clock are only available in **MB95F204H/F204K/F203H/F203K/F202H/F202K**)
  - Selectable main clock source
    - Main OSC clock (up to 16.25 MHz, maximum machine clock frequency: 8.125 MHz)
    - External clock (up to 32.5 MHz, maximum machine clock frequency: 16.25 MHz)
    - Main internal CR clock (1/8/10 MHz ± 3%, maximum machine clock frequency: 10 MHz)
  - Selectable subclock source
    - Sub-OSC clock (32.768 kHz)
    - External clock (32.768 kHz)
    - Sub-internal CR clock (Typ: 100 kHz, Min: 50 kHz, Max: 200 kHz)
- Timer
  - 8/16-bit composite timer
  - Timebase timer
  - Watch prescaler
- LIN-UART (**MB95F204H/F204K/F203H/F203K/F202H/F202K**)
  - Full duplex double buffer
    - Capable of clock-synchronized serial data transfer and clock-asynchronized serial data transfer

For the information for microcontroller supports, see the following web site.

<http://edevice.fujitsu.com/micom/en-support/>

# MB95200H/210H Series

(Continued)

- External interrupt
  - Interrupt by edge detection (rising edge, falling edge, and both edges can be selected)
  - Can be used to wake up the device from different low-power consumption (standby) modes
- 8/10-bit A/D converter
  - 8-bit or 10-bit resolution can be selected.
- Low power consumption (standby) mode
  - Stop mode
  - Sleep mode
  - Watch mode
  - Timebase timer mode
- I/O port (Max: 17) (**MB95F204K/F203K/F202K**)
  - General-purpose I/O ports (Max):  
CMOS I/O: 15, N-ch open drain: 2
- I/O port (Max: 16) (**MB95F204H/F203H/F202H**)
  - General-purpose I/O ports (Max):  
CMOS I/O: 15, N-ch open drain: 1
- I/O port (Max: 5) (**MB95F214K/F213K/F212K**)
  - General-purpose I/O ports (Max):  
CMOS I/O: 3, N-ch open drain: 2
- I/O port (Max: 4) (**MB95F214H/F213H/F212H**)
  - General-purpose I/O ports (Max):  
CMOS I/O: 3, N-ch open drain: 1
- On-chip debug
  - 1-wire serial control
  - Serial writing supported (asynchronous mode)
- Hardware/software watchdog timer
  - Built-in hardware watchdog timer
- Low-voltage detection reset circuit
  - Built-in low-voltage detector
- Clock supervisor counter
  - Built-in clock supervisor counter function
- Programmable port input voltage level
  - CMOS input level / hysteresis input level
- Flash memory security function
  - Protects the contents of flash memory

## ■ PRODUCT LINE-UP

Part number	MB95 F204H	MB95 F203H	MB95 F202H	MB95 F204K	MB95 F203K	MB95 F202K	MB95 F214H	MB95 F213H	MB95 F212H	MB95 F214K	MB95 F213K	MB95 F212K
Parameter												
Type	Flash memory product											
Clock supervisor counter	It supervises the main clock oscillation.											
ROM capacity	16 KB	8 KB	4 KB	16 KB	8 KB	4 KB	16 KB	8 KB	4 KB	16 KB	8 KB	4 KB
RAM capacity	496 B	496 B	240 B	496 B	496 B	240 B	496 B	496 B	240 B	496 B	496 B	240 B
Low-voltage detection reset	No			Yes			No			Yes		
Reset input	Dedicated			Software select			Dedicated			Software select		
CPU functions	Number of basic instructions : 136 Instruction bit length : 8 bits Instruction length : 1 to 3 bytes Data bit length : 1, 8, and 16 bits Minimum instruction execution time : 61.5 ns (with machine clock = 16.25 MHz) Interrupt processing time : 0.6 μs (with machine clock = 16.25 MHz)											
General-purpose I/O	I/O ports (Max): 16 CMOS: 15, N-ch: 1			I/O ports (Max): 17 CMOS: 15, N-ch: 2			I/O ports (Max): 4 CMOS: 3, N-ch: 1			I/O ports (Max): 5 CMOS: 3, N-ch: 2		
Timebase timer	Interrupt cycle : 0.256 ms - 8.3 s (when external clock = 4 MHz)											
Hardware/software watchdog timer	Reset generation cycle Main oscillation clock at 10 MHz : 105 ms (Min) The sub-CR clock can be used as the source clock of the hardware watchdog.											
Wild register	It can be used to replace three bytes of data.											
LIN-UART	A wide range of communication speed can be selected by a dedicated reload timer. It has a full duplex double buffer. Clock-synchronized serial data transfer and clock-asynchronized serial data transfer is enabled. The LIN function can be used as a LIN master or a LIN slave.						No LIN-UART					
8/10-bit A/D converter	6 ch. 8-bit or 10-bit resolution can be selected.						2 ch.					
8/16-bit composite timer	2 ch.						1 ch. The timer can be configured as an "8-bit timer x 2 channels" or a "16-bit timer x 1 channel". It has built-in timer function, PWC function, PWM function and input capture function. Count clock: it can be selected from internal clocks (seven types) and external clocks. It can output square wave.					
External interrupt	6 ch.						2 ch. Interrupt by edge detection (rising edge, falling edge, or both edges can be selected.) It can be used to wake up the device from standby modes.					
On-chip debug	1-wire serial control It supports serial writing. (asynchronous mode)

## ■ DIFFERENCES AMONG PRODUCTS AND NOTES ON PRODUCT SELECTION

- Current consumption

When using the on-chip debug function, take account of the current consumption of flash erase/program.

For details of current consumption, see “■ ELECTRICAL CHARACTERISTICS”.

- Package

For details of information on each package, see “■ PACKAGES AND CORRESPONDING PRODUCTS” and “■ PACKAGE DIMENSIONS”.

- Operating voltage

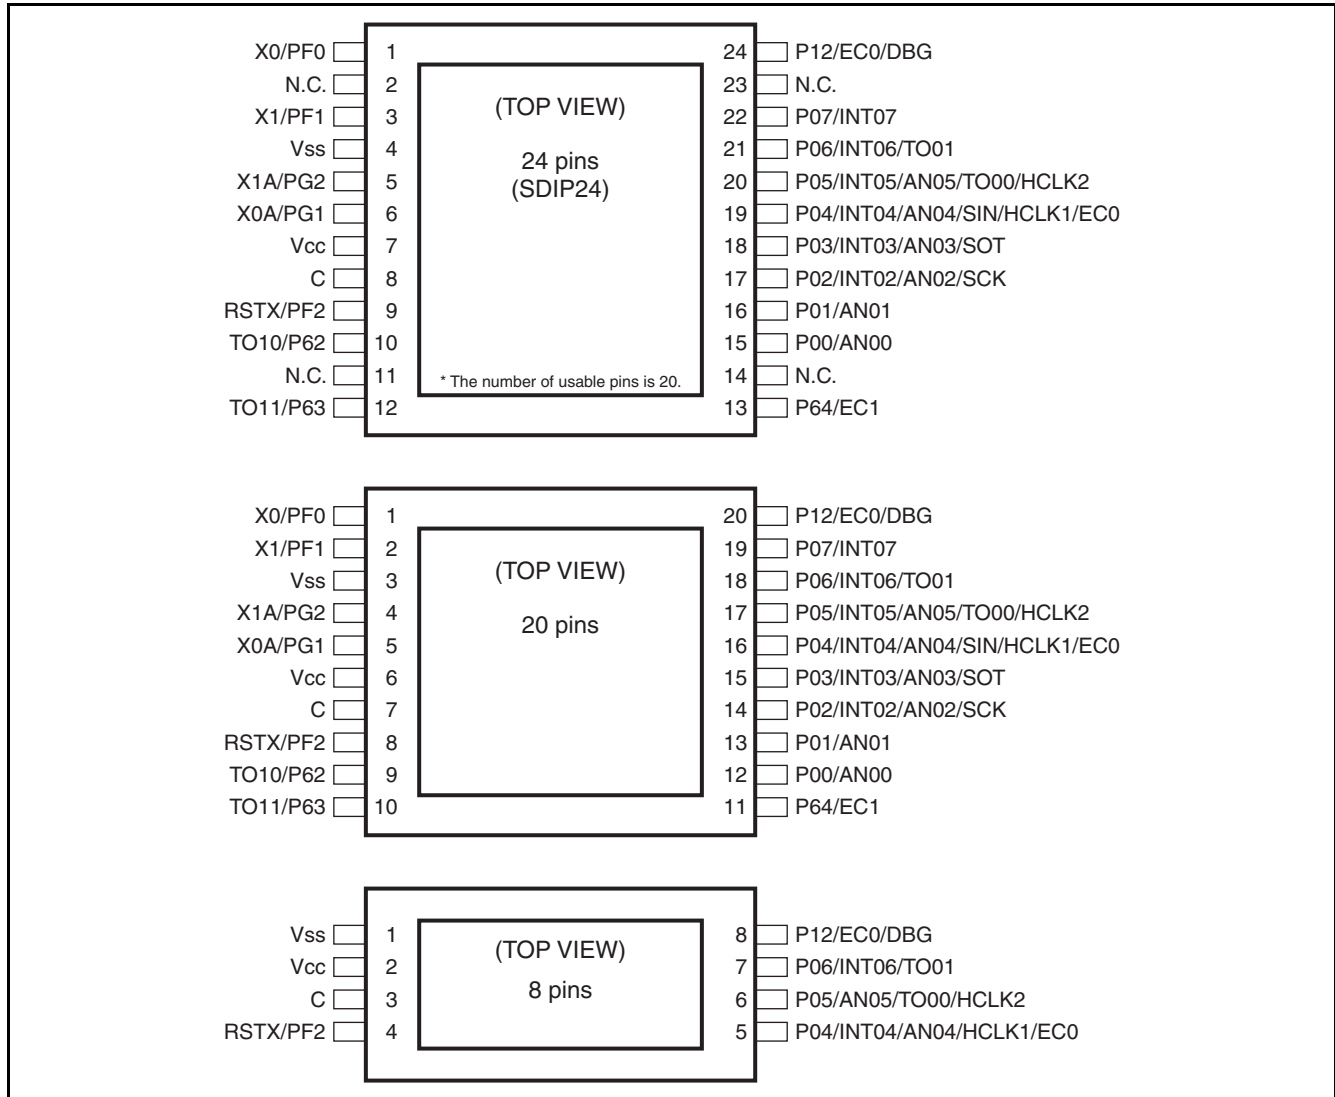

The operating voltage varies, depending on whether the on-chip debug function is used or not.

For details of the operating voltage, see “■ ELECTRICAL CHARACTERISTICS”.

- On-chip debug function

The on-chip debug function requires that  $V_{CC}$ ,  $V_{SS}$  and 1 serial-wire be connected to an evaluation tool. In addition, if the flash memory data has to be updated, the RSTX/PF2 pin must also be connected to the same evaluation tool.

## ■ PIN ASSIGNMENT

## ■ PIN DESCRIPTION (MB95200H Series 24 pins)

Pin no.	Pin name	I/O circuit type*	Function
1	PF0	B	General-purpose I/O port
	X0		Main clock input oscillation pin
2	N.C.	—	It is an internally unconnected pin. Always leave it unconnected.
3	PF1	B	General-purpose I/O port
	X1		Main clock I/O oscillation pin
4	V <sub>ss</sub>	—	Power supply pin (GND)
5	PG2	C	General-purpose I/O port
	X1A		Subclock I/O oscillation pin
6	PG1	C	General-purpose I/O port
	X0A		Subclock input oscillation pin
7	V <sub>cc</sub>	—	Power supply pin
8	C	—	Capacitor connection pin
9	PF2	A	General-purpose I/O port
	RSTX		Reset pin This is a dedicated reset pin in MB95F202H/F203H/F204H.
10	P62	D	General-purpose I/O port High-current port
	TO10		8/16-bit composite timer ch. 1 output pin
11	N.C.	—	It is an internally unconnected pin. Always leave it unconnected.
12	P63	D	General-purpose I/O port High-current port
	TO11		8/16-bit composite timer ch. 1 output pin
13	P64	D	General-purpose I/O port
	EC1		8/16-bit composite timer ch. 1 clock input pin
14	N.C.	—	It is an internally unconnected pin. Always leave it unconnected.
15	P00	E	General-purpose I/O port
	AN00		A/D converter analog input pin
16	P01	E	General-purpose I/O port
	AN01		A/D converter analog input pin
17	P02	E	General-purpose I/O port
	INT02		External interrupt input pin
	AN02		A/D converter analog input pin
	SCK		LIN-UART clock I/O pin

## ■ PIN DESCRIPTION (MB95200H Series 20 pins)

Pin no.	Pin name	I/O circuit type*	Function
1	PF0/X0	B	General-purpose I/O port This pin is also used as the main clock input oscillation pin.
2	PF1/X1	B	General-purpose I/O port This pin is also used as the main clock input/output oscillation pin.
3	V <sub>SS</sub>	—	Power supply pin (GND)
4	PG2/X1A	C	General-purpose I/O port This pin is also used as the subclock input/output oscillation pin.
5	PG1/X0A	C	General-purpose I/O port This pin is also used as the subclock input oscillation pin.
6	V <sub>CC</sub>	—	Power supply pin
7	C	—	Capacitor connection pin
8	PF2/RSTX	A	General-purpose I/O port This pin is also used as a reset pin. This pin is a dedicated reset pin in MB95F204H/F203H/F202H.
9	P62/TO10	D	General-purpose I/O port High-current port This pin is also used as the 8/16-bit composite timer ch. 1 output.
10	P63/TO11	D	General-purpose I/O port High-current port This pin is also used as the 8/16-bit composite timer ch. 1 output.
11	P64/EC1	D	General-purpose I/O port This pin is also used as the 8/16-bit composite timer ch. 1 clock input.
12	P00/AN00	E	General-purpose I/O port This pin is also used as the A/D converter analog input.
13	P01/AN01	E	General-purpose I/O port This pin is also used as the A/D converter analog input.
14	P02/INT02/AN02/ SCK	E	General-purpose I/O port This pin is also used as the external interrupt input. This pin is also used as the A/D converter analog input. This pin is also used as the LIN-UART clock I/O.
15	P03/INT03/AN03/ SOT	E	General-purpose I/O port This pin is also used as the external interrupt input. This pin is also used as the A/D converter analog input. This pin is also used as the LIN-UART data output.
16	P04/INT04/AN04/ SIN/HCLK1/EC0	F	General-purpose I/O port This pin is also used as the external interrupt input. This pin is also used as the A/D converter analog input. This pin is also used as the LIN-UART data input. This pin is also used as the external clock input. This pin is also used as the 8/16-bit composite timer ch. 0 clock input.

## ■ NOTES ON DEVICE HANDLING

- Preventing latch-ups

When using the device, ensure that the voltage applied does not exceed the maximum voltage rating.

In a CMOS IC, if a voltage higher than  $V_{CC}$  or a voltage lower than  $V_{SS}$  is applied to an input/output pin that is neither a medium-withstand voltage pin nor a high-withstand voltage pin, or if a voltage out of the rating range of power supply voltage mentioned in “1. Absolute Maximum Ratings” of ■ ELECTRICAL CHARACTERISTICS” is applied to the  $V_{CC}$  pin or the  $V_{SS}$  pin, a latch-up may occur.

When a latch-up occurs, power supply current increases significantly, which may cause a component to be thermally destroyed.

- Stabilizing supply voltage

Supply voltage must be stabilized.

A malfunction may occur when power supply voltage fluctuates rapidly even though the fluctuation is within the guaranteed operating range of the  $V_{CC}$  power supply voltage.

As a rule of voltage stabilization, suppress voltage fluctuation so that the fluctuation in  $V_{CC}$  ripple (p-p value) at the commercial frequency (50 Hz/60 Hz) does not exceed 10% of the standard  $V_{CC}$  value, and the transient fluctuation rate does not exceed 0.1 V/ms at a momentary fluctuation such as switching the power supply.

- Notes on using the external clock

When an external clock is used, oscillation stabilization wait time is required for power-on reset, wake-up from subclock mode or stop mode.

## ■ PIN CONNECTION

- Treatment of unused pins

If an unused input pin is left unconnected, a component may be permanently damaged due to malfunctions or latch-ups. Always pull up or pull down an unused input pin through a resistor of at least 2 k $\Omega$ . Set an unused input/output pin to the output state and leave it unconnected, or set it to the input state and treat it the same as an unused input pin. If there is an unused output pin, leave it unconnected.

- Power supply pins

To reduce unnecessary electro-magnetic emission, prevent malfunctions of strobe signals due to an increase in the ground level, and conform to the total output current standard, always connect the  $V_{CC}$  pin and the  $V_{SS}$  pin to the power supply and ground outside the device. In addition, connect the current supply source to the  $V_{CC}$  pin and the  $V_{SS}$  pin with low impedance.

It is also advisable to connect a ceramic bypass capacitor of approximately 0.1  $\mu$ F between the  $V_{CC}$  pin and the  $V_{SS}$  pin at a location close to this device.

- DBG pin

Connect the DBG pin directly to an external pull-up resistor.

To prevent the device from unintentionally entering the debug mode due to noise, minimize the distance between the DBG pin and the  $V_{CC}$  or  $V_{SS}$  pin when designing the layout of the printed circuit board.

The DBG pin should not stay at “L” level after power-on until the reset output is released.

- RSTX pin

Connect the RSTX pin directly to an external pull-up resistor.

To prevent the device from unintentionally entering the reset mode due to noise, minimize the distance between the RSTX pin and the  $V_{CC}$  or  $V_{SS}$  pin when designing the layout of the printed circuit board.

The RSTX/PF2 pin functions as the reset input/output pin after power-on. In addition, the reset output can be enabled by the RSTOE bit of the SYSC register, and the reset input function or the general purpose I/O function can be selected by the RSTEN bit of the SYSC register.

# MB95200H/210H Series

- C pin

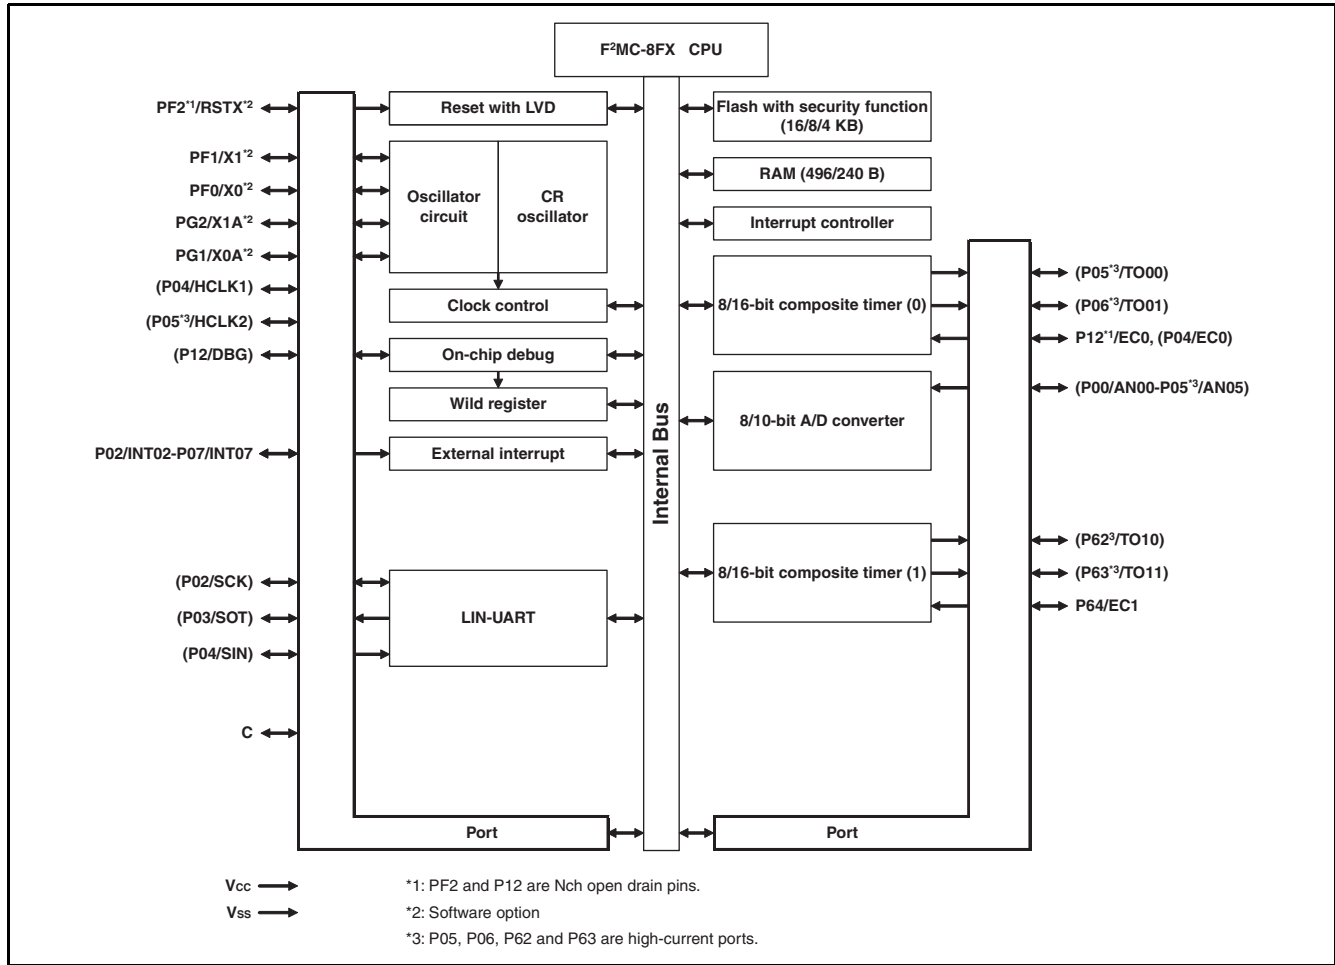

Use a ceramic capacitor or a capacitor with equivalent frequency characteristics. The bypass capacitor for the  $V_{CC}$  pin must have a capacitance larger than  $C_s$ . For the connection to a smoothing capacitor  $C_s$ , see the diagram below. To prevent the device from unintentionally entering an unknown mode due to noise, minimize the distance between the C pin and  $C_s$  and the distance between  $C_s$  and the  $V_{SS}$  pin when designing the layout of a printed circuit board.

- DBG/RSTX/C pin connection diagram

## ■ ELECTRICAL CHARACTERISTICS

### 1. Absolute Maximum Ratings

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
Power supply voltage*1	V <sub>CC</sub>	V <sub>SS</sub> -0.3	V <sub>SS</sub> +6	V	
Input voltage*1	V <sub>I1</sub>	V <sub>SS</sub> -0.3	V <sub>CC</sub> +0.3	V	Other than PF2*2
	V <sub>I2</sub>	V <sub>SS</sub> -0.3	10.5	V	PF2
Output voltage*1	V <sub>O</sub>	V <sub>SS</sub> -0.3	V <sub>SS</sub> +6	V	*2
Maximum clamp current	I <sub>CLAMP</sub>	-2	+2	mA	Applicable to pins listed in *3
Total maximum clamp current	Σ I <sub>CLAMP</sub>	—	20	mA	Applicable to pins listed in *3
“L” level maximum output current	I <sub>OL1</sub>	—	15	mA	Other than P05, P06, P62 and P63*4
	I <sub>OL2</sub>	—	15		P05, P06, P62 and P63*4
“L” level average current	I <sub>OLAV1</sub>	—	4	mA	Other than P05, P06, P62 and P63*4 Average output current = operating current × operating ratio (1 pin)
	I <sub>OLAV2</sub>	—	12		P05, P06, P62 and P63*4 Average output current = operating current × operating ratio (1 pin)
“L” level total maximum output current	ΣI <sub>OL</sub>	—	100	mA	
“L” level total average output current	ΣI <sub>OLAV</sub>	—	50	mA	Total average output current = operating current × operating ratio (Total number of pins)
“H” level maximum output current	I <sub>OH1</sub>	—	-15	mA	Other than P05, P06, P62 and P63*4
	I <sub>OH2</sub>	—	-15		P05, P06, P62 and P63*4
“H” level average current	I <sub>OHAV1</sub>	—	-4	mA	Other than P05, P06, P62 and P63*4 Average output current = operating current × operating ratio (1 pin)
	I <sub>OHAV2</sub>	—	-8		P05, P06, P62 and P63*4 Average output current = operating current × operating ratio (1 pin)
“H” level total maximum output current	ΣI <sub>OH</sub>	—	-100	mA	
“H” level total average output current	ΣI <sub>OHAV</sub>	—	-50	mA	Total average output current = operating current × operating ratio (Total number of pins)
Power consumption	P <sub>d</sub>	—	320	mW	
Operating temperature	T <sub>A</sub>	-40	+85	°C	
Storage temperature	T <sub>stg</sub>	-55	+150	°C	

- \*1: The parameter is based on  $V_{SS} = 0.0\text{ V}$ .
- \*2:  $V_I$  and  $V_O$  must not exceed  $V_{CC}+0.3\text{ V}$ .  $V_I$  must not exceed the rated voltage. However, if the maximum current to/from an input is limited by means of an external component, the  $I_{CLAMP}$  rating is used instead of the  $V_I$  rating.
- \*3: Applicable to the following pins: P00 to P07, P62 to P64, PG1, PG2, PF0, PF1 (P00 to P03, P07, P62 to P64, PG1, PG2, PF0 and PF1 are available in MB95F204H/F203H/F202H/F204K/F203K/F202K.)
  - Use under recommended operating conditions.
  - Use with DC voltage (current).
  - The HV (High Voltage) signal is an input signal exceeding the  $V_{CC}$  voltage. Always connect a limiting resistor between the HV (High Voltage) signal and the microcontroller before applying the HV (High Voltage) signal.
  - The value of the limiting resistor should be set to a value at which the current to be input to the microcontroller pin when the HV (High Voltage) signal is input is below the standard value, irrespective of whether the current is transient current or stationary current.
  - When the microcontroller drive current is low, such as in low power consumption modes, the HV (High Voltage) input potential may pass through the protective diode to increase the potential of the  $V_{CC}$  pin, affecting other devices.
  - If the HV (High Voltage) signal is input when the microcontroller power supply is off (not fixed at 0 V), since power is supplied from the pins, incomplete operations may be executed.
  - If the HV (High Voltage) input is input after power-on, since power is supplied from the pins, the voltage of power supply may not be sufficient to enable a power-on reset.
  - Do not leave the HV (High Voltage) input pin unconnected.
  - Example of a recommended circuit:

- Input/Output Equivalent Circuit

- \*4: P62 and P63 are available in MB95F204H/F203H/F202H/F204K/F203K/F202K.

**WARNING:** A semiconductor device may be damaged by applying stress (voltage, current, temperature, etc.) in excess of the absolute maximum rating. Therefore, ensure that not a single parameter exceeds its absolute maximum rating.

# MB95200H/210H Series

## 2. Recommended Operating Conditions

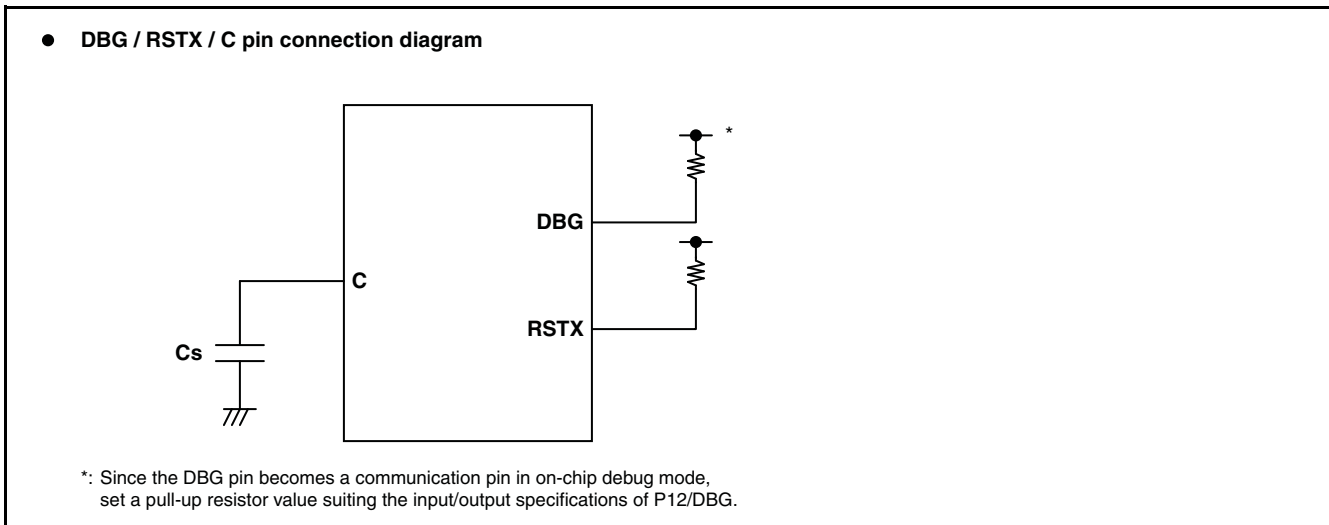

(V<sub>SS</sub>=0.0 V)

Parameter	Symbol	Value		Unit	Remarks	
		Min	Max			
Power supply voltage	V <sub>CC</sub>	2.4 <sup>*1*2</sup>	5.5 <sup>*1</sup>	V	In normal operation	Other than on-chip debug mode
		2.3	5.5		Hold condition in stop mode	
		2.9	5.5		In normal operation	On-chip debug mode
		2.3	5.5		Hold condition in stop mode	
Smoothing capacitor	C <sub>S</sub>	0.022	1	μF	*3	
Operating temperature	T <sub>A</sub>	-40	+85	°C	Other than on-chip debug function	
		+5	+35		On-chip debug function	

\*1: The value varies depending on the operating frequency, the machine clock and the analog guaranteed range.

\*2: The value is 2.88 V when the low-voltage detection reset is used.

\*3: Use a ceramic capacitor or a capacitor with equivalent frequency characteristics. The bypass capacitor for the V<sub>CC</sub> pin must have a capacitance larger than C<sub>S</sub>. For the connection to a smoothing capacitor C<sub>S</sub>, see the diagram below. To prevent the device from unintentionally entering an unknown mode due to noise, minimize the distance between the C pin and C<sub>S</sub> and the distance between C<sub>S</sub> and the V<sub>SS</sub> pin when designing the layout of a printed circuit board.

**WARNING:** The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the electrical characteristics of the device are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact sales representatives beforehand.

\*1: The input level of P04 can be switched between “CMOS input level” and “hysteresis input level”. The input level selection register (ILSR) is used to switch between the two input levels.

\*2: P62 and P63 are available in MB95F204H/F203H/F202H/F204K/F203K/F202K.

\*3: P00 to P03, P07, PG1 and PG2 are available in MB95F204H/F203H/F202H/F204K/F203K/F202K.

(Continued)

(Continued)

- \*4: • The power supply current is determined by the external clock. When the low-voltage detection option is selected, the power-supply current will be the sum of adding the current consumption of the low-voltage detection circuit ( $I_{LVD}$ ) to a specified value. In addition, when both the low-voltage detection option and the CR oscillator are selected, the power supply current will be the sum of adding up the current consumption of the low-voltage detection circuit, the current consumption of the CR oscillators ( $I_{CRH}$ ,  $I_{CRL}$ ) and a specified value. In on-chip debug mode, the CR oscillator ( $I_{CRH}$ ) and the low-voltage detection circuit are always enabled, and current consumption therefore increases accordingly.
  - See "4. AC Characteristics: (1) Clock Timing" for  $F_{CH}$  and  $F_{CL}$ .
  - See "4. AC Characteristics: (2) Source Clock/Machine Clock" for  $F_{MP}$  and  $F_{MPL}$ .
- \*5 : PF2 act as high voltage supply for the flash memory during program and erase. It can tolerate high voltage input. For details, see section "6. Flash Memory Program/Erase Characteristics".

## (4) Power-on Reset

( $V_{SS} = 0.0 \text{ V}$ ,  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$ )

Parameter	Symbol	Condition	Value		Unit	Remarks
			Min	Max		
Power supply rising time	$t_R$	—	—	50	ms	
Power supply cutoff time	$t_{OFF}$	—	1	—	ms	Wait time until power-on

Note: A sudden change of power supply voltage may activate the power-on reset function. When changing the power supply voltage during the operation, set the slope of rising to within 30 mV/ms as shown below.

# MB95200H/210H Series

## (5) Peripheral Input Timing

( $V_{CC} = 5.0 V \pm 10\%$ ,  $V_{SS} = 0.0 V$ ,  $T_A = -40^\circ C$  to  $+85^\circ C$ )

Parameter	Symbol	Pin name	Value		Unit
			Min	Max	
Peripheral input "H" pulse width	$t_{LH}$	INT02 to INT07, EC0, EC1 <sup>*2</sup>	$2 t_{MCLK}^{*1}$	—	ns
Peripheral input "L" pulse width	$t_{HL}$		$2 t_{MCLK}^{*1}$	—	ns

\*1: See "(2) Source Clock/Machine Clock" for  $t_{MCLK}$ .

\*2: INT02, INT03, INT05, INT07 and EC1 are available in MB95F204H/F203H/F202H/F204K/F203K/F202K.

# MB95200H/210H Series

## (6) LIN-UART Timing (Available in MB95F204H/F203H/F202H/F204K/F203K/F202K only)

Sampling is executed at the rising edge of the sampling clock\*<sup>1</sup>, and serial clock delay is disabled\*<sup>2</sup>.  
(ESCR register : SCES bit = 0, ECCR register : SCDE bit = 0)

(V<sub>CC</sub> = 5.0 V±10%, AV<sub>SS</sub> = V<sub>SS</sub> = 0.0 V, T<sub>A</sub> = -40°C to +85°C)

Parameter	Symbol	Pin name	Condition	Value		Unit
				Min	Max	
Serial clock cycle time	t <sub>SCYC</sub>	SCK	Internal clock operation output pin: C <sub>L</sub> = 80 pF+1 TTL	5 t <sub>MCLK</sub> * <sup>3</sup>	—	ns
SCK ↓→ SOT delay time	t <sub>SLOVI</sub>	SCK, SOT		-95	+95	ns
Valid SIN → SCK ↑	t <sub>IVSHI</sub>	SCK, SIN		t <sub>MCLK</sub> * <sup>3</sup> +190	—	ns
SCK ↑→ valid SIN hold time	t <sub>SHIXI</sub>	SCK, SIN		0	—	ns
Serial clock “L” pulse width	t <sub>SLSH</sub>	SCK	External clock operation output pin: C <sub>L</sub> = 80 pF+1 TTL	3 t <sub>MCLK</sub> * <sup>3</sup> -t <sub>R</sub>	—	ns
Serial clock “H” pulse width	t <sub>SHSL</sub>	SCK		t <sub>MCLK</sub> * <sup>3</sup> +95	—	ns
SCK ↓→ SOT delay time	t <sub>SLOVE</sub>	SCK, SOT		—	2 t <sub>MCLK</sub> * <sup>3</sup> +95	ns
Valid SIN → SCK ↑	t <sub>IVSHE</sub>	SCK, SIN		190	—	ns
SCK ↑→ valid SIN hold time	t <sub>SHIXE</sub>	SCK, SIN		t <sub>MCLK</sub> * <sup>3</sup> +95	—	ns
SCK fall time	t <sub>F</sub>	SCK		—	10	ns
SCK rise time	t <sub>R</sub>	SCK		—	10	ns

\*1: There is a function used to choose whether the sampling of reception data is performed at a rising edge or a falling edge of the serial clock.

\*2: The serial clock delay function is a function used to delay the output signal of the serial clock for half the clock.

\*3: See “(2) Source Clock/Machine Clock” for t<sub>MCLK</sub>.

● Internal shift clock mode

● External shift clock mode

## 5. A/D Converter

### (1) A/D Converter Electrical Characteristics

( $V_{CC} = 4.0\text{ V to }5.5\text{ V}$ ,  $V_{SS} = 0.0\text{ V}$ ,  $T_A = -40^\circ\text{C to }+85^\circ\text{C}$ )

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
Resolution	—	—	—	10	bit	
Total error		-3	—	+3	LSB	
Linearity error		-2.5	—	+2.5	LSB	
Differential linear error		-1.9	—	+1.9	LSB	
Zero transition voltage	$V_{OT}$	$V_{SS}-1.5\text{ LSB}$	$V_{SS}+0.5\text{ LSB}$	$V_{SS}+2.5\text{ LSB}$	V	
Full-scale transition voltage	$V_{FST}$	$V_{CC}-4.5\text{ LSB}$	$V_{CC}-2\text{ LSB}$	$V_{CC}+0.5\text{ LSB}$	V	
Compare time	—	0.9	—	16500	$\mu\text{s}$	$4.5\text{ V} \leq V_{CC} \leq 5.5\text{ V}$
		1.8	—	16500	$\mu\text{s}$	$4.0\text{ V} \leq V_{CC} < 4.5\text{ V}$
Sampling time	—	0.6	—	$\infty$	$\mu\text{s}$	$4.5\text{ V} \leq V_{CC} \leq 5.5\text{ V}$ , with external impedance $< 5.4\text{ k}\Omega$
		1.2	—	$\infty$	$\mu\text{s}$	$4.0\text{ V} \leq V_{CC} \leq 4.5\text{ V}$ , with external impedance $< 2.4\text{ k}\Omega$
Analog input current	$I_{AIN}$	-0.3	—	+0.3	$\mu\text{A}$	
Analog input voltage	$V_{AIN}$	$V_{SS}$	—	$V_{CC}$	V	

## (2) Notes on Using the A/D Converter

### • External impedance of analog input and its sampling time

- The A/D converter has a sample and hold circuit. If the external impedance is too high to keep sufficient sampling time, the analog voltage charged to the internal sample and hold capacitor is insufficient, adversely affecting A/D conversion precision. Therefore, to satisfy the A/D conversion precision standard, considering the relationship between the external impedance and minimum sampling time, either adjust the register value and operating frequency or decrease the external impedance so that the sampling time is longer than the minimum value. In addition, if sufficient sampling time cannot be secured, connect a capacitor of about 0.1  $\mu\text{F}$  to the analog input pin.

#### • Analog input equivalent circuit

$$4.5 \text{ V} \leq V_{cc} \leq 5.5 \text{ V} : R \approx 1.95 \text{ k}\Omega \text{ (Max)}, C \approx 17 \text{ pF (Max)}$$

$$4.0 \text{ V} \leq V_{cc} < 4.5 \text{ V} : R \approx 8.98 \text{ k}\Omega \text{ (Max)}, C \approx 17 \text{ pF (Max)}$$

Note: The values are reference values.

#### • Relationship between external impedance and minimum sampling time

### • A/D conversion error

As  $|V_{cc} - V_{ss}|$  decreases, the A/D conversion error increases proportionately.

# MB95200H/210H Series

## (3) Definitions of A/D Converter Terms

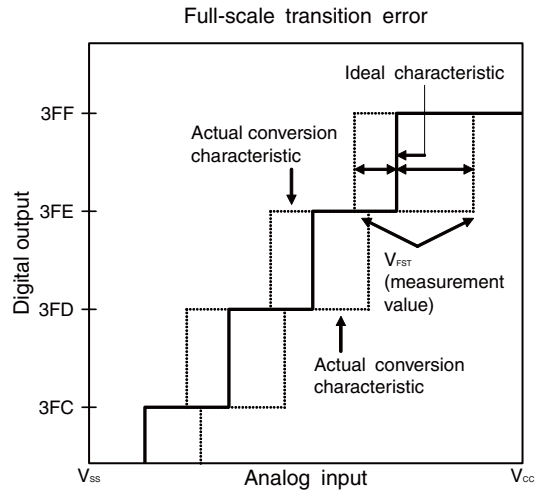

- Resolution  
It indicates the level of analog variation that can be distinguished by the A/D converter. When the number of bits is 10, analog voltage can be divided into  $2^{10} = 1024$ .
- Linearity error (unit: LSB)  
It indicates how much an actual conversion value deviates from the straight line connecting the zero transition point ("00 0000 0000"  $\leftrightarrow$  "00 0000 0001") of a device to the full-scale transition point ("11 1111 1111"  $\leftrightarrow$  "11 1111 1110") of the same device.
- Differential linear error (unit: LSB)  
It indicates how much the input voltage required to change the output code by 1 LSB deviates from an ideal value.
- Total error (unit: LSB)  
It indicates the difference between an actual value and a theoretical value. The error can be caused by a zero transition error, a full-scale transition errors, a linearity error, a quantum error, or noise.

(Continued)

(Continued)

$$\text{Linearity error of digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times N + V_{OT}\}}{1 \text{ LSB}}$$

$$\text{Differential linear error of digital output } N = \frac{V_{(N+1)T} - V_{NT}}{1 \text{ LSB}} - 1$$

N : A/D converter digital output value

$V_{NT}$ : Voltage at which the digital output transits from (N - 1) to N

$V_{OT}$  (ideal value) =  $V_{SS} + 0.5 \text{ LSB}$  [V]

$V_{FST}$  (ideal value) =  $V_{CC} - 2.0 \text{ LSB}$  [V]

# MB95200H/210H Series

## 6. Flash Memory Program/Erase Characteristics

Parameter	Value			Unit	Remarks
	Min	Typ	Max		
Chip erase time	—	1* <sup>1</sup>	15* <sup>2</sup>	s	00 <sub>H</sub> programming time prior to erasure is excluded.
Byte programming time	—	32	3600	μs	System-level overhead is excluded.
Erase/program voltage	9.5	10	10.5	V	The erase/program voltage must be applied to the PF2 pin in erase/program.
Current drawn on PF2	—	—	5.0	mA	Current consumption of PF2 pin during flash memory program/erase
Erase/program cycle	—	100000	—	cycle	
Power supply voltage at erase/program	3.0	—	5.5	V	
Flash memory data retention time	20* <sup>3</sup>	—	—	year	Average T <sub>A</sub> = +85°C

\*1: T<sub>A</sub> = +25°C, V<sub>CC</sub> = 5.0 V, 100000 cycles

\*2: T<sub>A</sub> = +85°C, V<sub>CC</sub> = 4.5 V, 100000 cycles

\*3: This value is converted from the result of a technology reliability assessment. (The value is converted from the result of a high temperature accelerated test by using the Arrhenius equation with the average temperature being +85°C).

## ■ MAIN CHANGES IN THIS EDITION

Page	Section	Change results
30	■ ELECTRICAL CHARACTERISTICS 1. Absolute Maximum Ratings	Changed the characteristics of Input voltage.
33	3. DC Characteristics	Corrected the maximum value of “H” level input voltage for PF2 pin. $V_{CC} + 0.3 \rightarrow 10.5$
		Corrected the maximum value of Open-drain output application voltage. $0.2V_{CC} \rightarrow V_{SS} + 5.5$
36		Added the footnote *5.
39	4. AC Characteristics (1) Clock Timing	Added a figure of HCLK1/HCLK2.
42	(2) Source Clock/Machine Clock	Corrected the graph of Operating voltage - Operating frequency (with the on-chip debug function). (Corrected the pitch)
43	(3) External Reset	Added “and power on” to the remarks column.
58	6. Flash Memory Program/Erase Characteristics	Added the row of “Current drawn on PF2”.
		Corrected the minimum value of Power supply voltage at erase/program. $4.5 \rightarrow 3.0$

The vertical lines marked in the left side of the page show the changes.

### All Rights Reserved.

The contents of this document are subject to change without notice.

Customers are advised to consult with sales representatives before ordering.

The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of FUJITSU SEMICONDUCTOR device; FUJITSU SEMICONDUCTOR does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information.

FUJITSU SEMICONDUCTOR assumes no liability for any damages whatsoever arising out of the use of the information.

Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of FUJITSU SEMICONDUCTOR or any third party or does FUJITSU SEMICONDUCTOR warrant non-infringement of any third-party's intellectual property right or other right by using such information. FUJITSU SEMICONDUCTOR assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that FUJITSU SEMICONDUCTOR will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

Exportation/release of any products described in this document may require necessary procedures in accordance with the regulations of the Foreign Exchange and Foreign Trade Control Law of Japan and/or US export control laws.

The company names and brand names herein are the trademarks or registered trademarks of their respective owners.
