## Impulse Withstand Voltage as High as 10kV with 4kV Dielectric Strength: Ideal for Power Supply Switching

- Input and output (between coil and contacts) are completely separated, with impulse withstand voltage of $10,000 \mathrm{~V}$.
- Insulation distance of 8 mm min . between coil and contacts satisfies the VDE Standard C/250 insulation requirements, and conforms to Electrical Appliance and Material Safety Law with dielectric strength of 4,000 VAC min. Standard model conforms to UL/CSA standards.
- VDE standard approved models are also available. Consult your Omron sales
 representative for availability.
- SPST-NO (1a) types conform to TV-8 rating, and DPST-NO (2a) types conform to TV-5 rating.
- Full-wave bridge rectifier compatible models are also available.

| Weight |  | Approx. 29 g |

Note: The above values are initial values

1. The contact resistance was measured with 1 A at 5 VDC with a fall-of-potential method.
*2. The insulation resistance was measured with a 500 VDC Megger Tester
applied to the same parts as those for checking the dielectric strength.
*3. This value was measured at a switching frequency of 120 operations $/ \mathrm{min}$.

## Precautions

- Please refer to "РСВ Relays Common Precautions" for correct use.
$\square$

## Correct Use

## - Mounting

- When mounting more than two Relays on a PCB, keep the gap as shown in the following figure.
- No specified mounting direction.
- Not compatible with sockets.

- There is the current-carrying metal part on the coil terminal. Do not mount to the PCB with patterned metal surface.

## - Other Precautions

- This Relay is suitable for power load switching of motors, transformers, solenoids, lamps, heaters, etc. Do not use the G4W to switch micro loads less than 100 mA , such as in signal applications.

[^0]Note: Do not use this document to operate the Unit.
