### WARNING: Not To Be Used for Personnel Protection

Never use this product as a sensing device for personnel protection. Doing so could lead to serious injury or death. This product does NOT include the self-checking redundant circuitry necessary to allow its use in personnel safety applications. A sensor failure or malfunction can cause either an energized or de-energized sensor output condition.

#### **Operating Conditions**

**Temperature:** -20° to +70° C (-4° to +158° F)

Maximum relative humidity: 90% at 50° C (non-condensing)

#### **Application Notes**

1.) 912 Series ac sensors can be destroyed from overload conditions.

2.) Use on low voltage requires careful analysis of the load to determine if the leakage current or on-state voltage of the sensor will interfere with proper operation of the load.

3.) The false-pulse protection feature may cause momentary drop-out of the load when the sensor is wired in series or parallel with mechanical switch contacts.

## **Retroreflective Targets**

Banner offers a wide selection of high-quality retroreflective targets. See the Accessories section of your current Banner Photoelectric Sensors catalog for complete information.

**NOTE:** Polarized sensors require corner cube type retroreflective targets. Non-polarized sensors may use any retroreflective target.

### **Replacement Lens Assemblies**

VALU-BEAM lens assemblies are field-replaceable. In addition, some lenses may be used to convert from one sensing mode to another, or to change the sensing range of a particular sensor. The possible conversions are listed in the table below.

| Models    | Description                                | Possible Sensing Mode or Range Changes            |
