PHOTOPOSITIF ALUMINIUM PCB

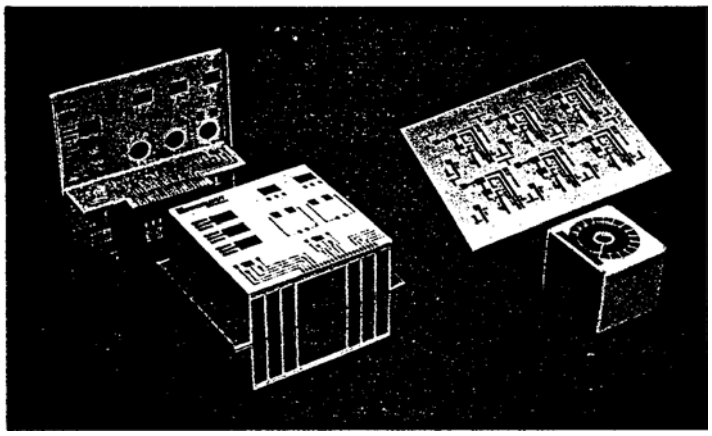
REF AAT10 20

August 2003

A NEW CONCEPT IN THERMAL MANAGEMENT.

Aluminum Base, Copper Clad Substrate

P.A PCB* is a thermal control substrate designed to manage heat created by power components. P . A PCB * offers several unique features for design engineers. Components can be soldered directly to the etched copper Layer of` P . A PCB* and they're isolated by the thermally conductive dielectric layer. Also, heat generated by power components is automatically transferred through this layer to the base plate of'- P . A P C B *_ . As a result, the thermal resistance of the circuit board is significantly reduced.



P.A P C B * **is a substrate, a heat sink and a printed circuit material.**

Applications include:

- Replacement for heat sinks and other hardware
- Replacement for fragile ceramic substrates
- Replacement for printed circuit board material
- Surface mount -layouts
- Custom material combinations and applications requiring specific thermal, dielectric and physical properties
- Smart power packages where power and logic are combined

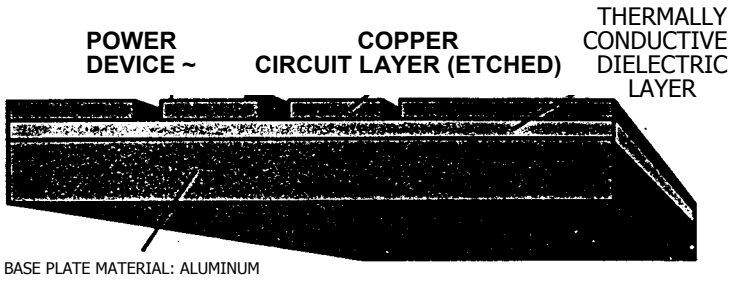
PRODUCT DATA. STANDARD CONFIGURATION

Circuit Layer	- Copper Foil - .0014 in. printed circuit grade
Dielectric	- .003 in.
Base plate	- .062 in. Aluminum (alloy 6061)

* P.A PCB Photopositif Aluminium PCB.

STANDARD CONSTRUCTION

P.A PCB* ,s a three layered substrate. The base plate (usually copper or aluminum) is bonded with a polymer based, thermally conductive dielectric to a circuit layer (either copper or aluminum clad copper foil).



TYPICAL PROPERTIES

Dielectric Strength	4000 Volts min.
Dielectric Constant	5-6
Thermal Conductivity	3 Watt Meter $^{-1^{\circ}}$ K^{-1}
Surface Resistivity	1x10^{9} Megohms
Process Temperature	350°C
Continuous Use Temperature	180°C

THERMAL RESISTANCE

Case #1 TO-220 transistor mounted to an etched pad. 4" x 5" panel size.

Temperature measurement	junction and pane!
Operating power	25 watts, DC
Thermal resistance	1.0°C/watt (⊖, junction to sink)

Case #2. A surface mount power transistor (MJD 3055) mounted to an etched pad. 1" x 3" panel size.

Temperature measurement -	junction and panel
Operating power	25 watts, DC
Thermal resistance	1.8"C/watt (⊖, junction to sink)

Case #3. A 200 x 200 silicon die with a resistor network covering 70% of its surface is soldered directly to an etched pad. Junction temperature was sensed using diodes surrounding the resistor network. 4" x 5" panel size.

Temperature measurement -	junction and panel
Operating power	20 watts, DC
Thermal resistance	1.0°CJwatt (⊖, junction to sink)

THERMAL EXPANSION COEFFICIENTS*

	cm/cm°C ($x10^{-6}$)
Epoxy-Glass PCB Material	10-30
Thermal Clad (Aluminum)	25
Thermal Clad (Copper)	18
Thermal Clad (CIC)	8
Alumina(99.5%)	7
Beryllia(99.5%)	8

*Approximate values

PEEL STRENGTH TESTING
Dielectric-Copper Foil

	Peel Strength (Conductor width)
10 minutes at 550°F(Solder Bath)	7 lbs/in

OPERATING TEMPERATURE VS. POWER DISSIPATED *Transistor junction temperature

(Data obtained using DPAK^{tm} , 3055 Transistors)

This table shows how transistors run cooler on Thermal Clad compared with transistors mounted on epoxy-glass printed circuit board material.
