Introduction of the 3 LED mark sensor

Can detect any mark!

Coaxial reflective optics and a sharp $1 \times 5 \text{ mm } 0.039 \times 0.197$ in spot enable high precision sensing. Stable detection of marks is possible.

R•G•B light emitting elements all in one

To detect any marking, this unit is equipped with red, green and blue LED light emitting elements all in one

Glass lens

High precision coaxial reflective optical system Half mirror

Panasonic Industrial Devices SUNX's unique coaxial reflective optics technology ensures very accurate sensing. The unit is made with a scratchproof glass lens. 4-digit digital display The 4-digit digital display enables

numerical sensing control and minute settings.

Operation panel 3 large buttons that click into position making operation easy.

Highest in the industry

12-bit A/D converter

A resolution of 1/4,000 is realized to enable high precision mark sensing.

Receiving element

Protection IP67

Washing the machines and production line with water will not affect the sensor thanks to its waterproof construction.

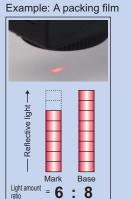

Spot size 1 × 5 mm 0.039×0.197 in approx.

Automatic optimal LED selection function

The 3 colors of the R•G•B LEDs are optimally selected according to the color combination. With the **LX-100**'s Mark mode, the built-in "Automatic optimal LED selection function" automatically selects the LED for the largest contrast (S / N ratio) between the mark and base (non-mark area) to ensure optimal sensing. For more stable detection, the sensor makes selection according to the contrast and not according to the reflected light variation between the mark and base (non-mark area).

The example on the right deals with reflected light on packing film.

Great figures are indicated for the blue LED's light amount ratio and, for even more stable sensing, the blue LED effectuates this mark sensing.

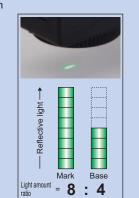

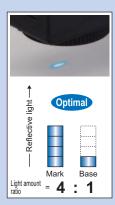

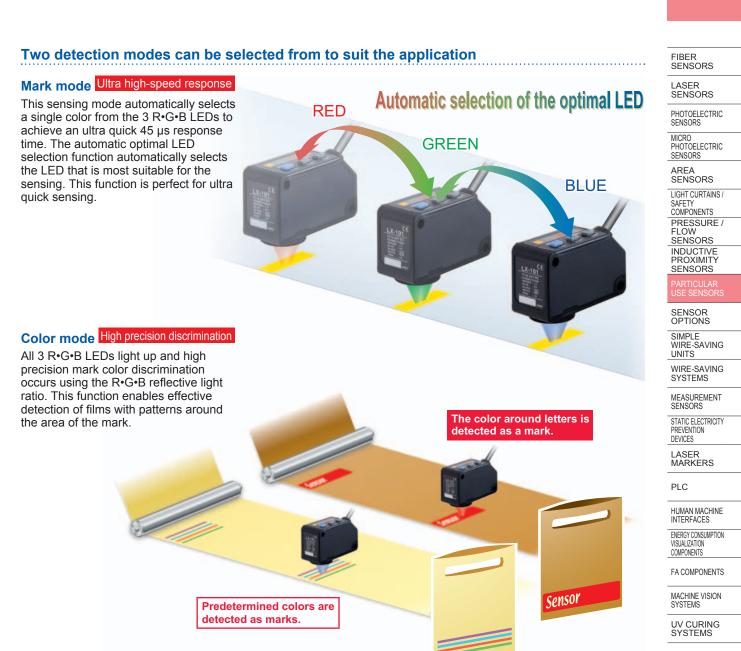

Image schematic

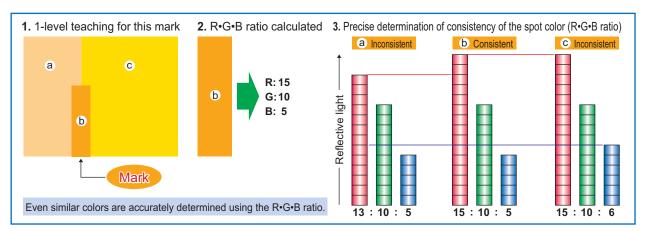

* You can select the mark mode or color mode through key operation.

High precision mark color discrimination

The color mode on the **LX-100** series utilizes all 3 R•G•B LEDs to determine the R•G•B ratio of the mark color. The built-in 12-bit A/D converter enables high precision 1/4,000-resolution judgments. The figure below is a graphic description of this process.

LASER SENSORS

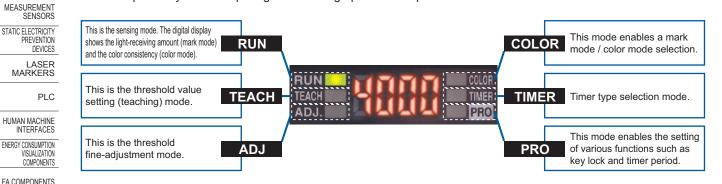

Its digital display makes settings easy! Numerical control of the settings is possible

The 4-digit digital display enables easy verification of received light from marks and base (non-mark area). Also, the threshold value can be controlled numerically enabling setting indication easily. Displaying the direct code enables settings verification. This function is handy for remote maintenance.

Even beginners can quickly master MODE NAVI operation

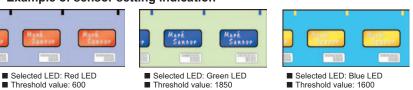

The sensor's basic operations are represented by 6 indicators (MODE NAVI). The user can check what mode the sensor is presently in with a quick glance making operation simple.

Sensing status digitally controllable

The sensing status, displayed numerically, can be verified at a glance. Also, the sensor settings for each type of packing film can be digitally indicated.

• Example of sensor setting indication

MACHINE VISION SYSTEMS

UV CURING SYSTEMS

Direct codes enable settings verification at a glance

The settings for the **LX-100** series sensors are displayed using a 4-digit direct code. Direct codes enable easy setting verification and maintenance by phone.

)31

TIMER

PRO

Direct code table (D-Code)

The sensor setting modes can be verified by a 4-digit code (D-Code). The table below shows a list of all available codes.

RUN	1000000
TEACH	
ADJ.	
ADU.	

 When in RUN mode, press the MODE key for at least 2 sec. to display the direct code. (Remove your finger from the MODE key and the direct code will disappear.)

								_			_	
	1	st digit			2	nd digit			3rd digi	t	4t	h digit
Display	Sensing mode (light source color)	Operation mode (Note 1)	Sensing (Note 2)	Display	Display mode	ECO mode (Note 4)	Turn mode (Note 5)	Display	Key lock	Timer mode	Display	Timer period
	- Mark mode (green)	L-ON	FINE COARSE		Standard	OFF	OFF ON		Full lock	non OFF-delay		1 ms 2 ms
		D-ON	FINE COARSE		Stanuaru	ON	OFF ON	num.	(All operations disabled) RUN teaching	ON-delay non	2	5 ms 10 ms
	- Mark mode (blue)	L-ON	FINE COARSE		Percent display	OFF	OFF ON	3-63	(Teaching only enabled)	OFF-delay ON-delay	4	20 ms 50 ms
		D-ON	FINE COARSE		(Note 3)	ON	OFF ON		RUN adjust	non OFF-delay	5	100 ms 200 ms
	- Mark mode (red)	L-ON	FINE COARSE						adjustment only enabled	ON-delay	8	500 ms
		D-ON	FINE COARSE	8				01 10			8 5	
c d	- Color mode	Consistent-ON	FINE COARSE	c d				c d			c d	
		Inconsistent-ON	FINE COARSE								E F	

Notes: 1) In Mark mode, L-ON / D-ON is automatically set in the sensor. For example, with 2-level teaching, press the ON key at the targeted mark and press the OFF key at the base (non-mark area). When doing so, the operator does not have to consider L-ON / D-ON.

- 2) Sensing accuracy can be set to either FINE (standard) or COARSE.
- 3) The percent display is only enabled in mark mode.

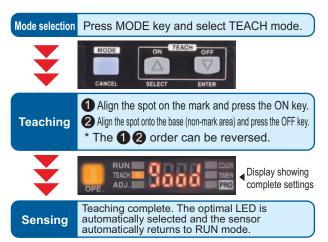

4) ECO mode is a function that reduces power consumption by turning off the digital display in the event that no button operations are made for a predetermined time (approx. 10 sec. or more) in RUN mode. Press any button to turn the digital display on again.

5) The turn mode is a function that reverses the digital display making it easily to be viewed in the event that the sensor installation renders the display up-side-down. * Default setting: D-code = "0004".

Super simple teaching

Press the ON button at the targeted mark.

Here is an example of the most basic setting method "2-level teaching".

Other teaching methods

- Full-auto teaching: In Mark mode, teaching is effective without stopping the sensing object.
- 1-level teaching: In Color mode, the color detected is aligned by the spot and teaching is effective.

Compact design for significant space savings

High precision sensing and multiple functions are all packed in a compact W57 × D24 × H38 mm W2.244 × D0.945 × H1.496 in body.

Cable and plug-in connector types are available depending on the equipment used. These sensors can be easily introduced to existing facilities.

External teaching possible

Teaching is possible through external input using an operation panel or touch panel even on hard-to-reach color mark sensors located inside an equipment. Also, models can be interchanged easily.

Mark mode	
2-level teaching and full-auto teaching possible	
Color mode	
1-level teaching possible	
1-level teaching possible	
Key lock function	

The key lock function enables input operation control that prevents mistaken changes in the sensor settings. Other detailed settings include "RUN adjust", allowing threshold value adjustment only, and "RUN teaching",

allowing teaching operation only. If the sensor is set to "RUN adjust" or "RUN teaching", adjustment and teaching are possible having the sensor remained in RUN mode. FIBER SENSORS

PRECAUTIONS FOR PROPER USE

Never use this product as a sensing device for personnel protection.
In case of using sensing devices for

personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

Mounting

 Care must be taken regarding the sensor mounting direction with respect to the object's direction of movement.

Do not make the sensor detect an object in this direction because it may cause unstable operation.

Mark and base

• The tightening torque should be 0.8 N·m or less.

Sensing glossy object

- Objects with a glossy surface have a large amount of specular reflection particles that may destabilize sensing. In such a case, by slightly tilting the sensor's beam axis, this specular reflection can be reduced rendering sensing more stable.
- If the surface of the sensing object has a shine, mount the sensor inclining approx. 10 to 15 degrees against the sensing object.

Wiring

- Make sure to carry out wiring in the power supply off condition.
- Take care that wrong wiring will damage the sensor.
- Verify that the supply voltage variation is within the rating.
- Take care that if a voltage exceeding the rated range is applied, or if an AC power supply is directly connected, the sensor may get burnt or damaged.
- In case noise generating equipment (switching regulator, inverter motor, etc.) is used in the vicinity of this product, connect the frame ground (F.G.) terminal of the equipment to an actual ground.
- If power is supplied from a commercial switching regulator, ensure that the frame ground (F.G.) terminal of the power supply is connected to an actual ground.
- Do not use during the initial transient time (0.5 sec.) after the power supply is switched on.
- Take care that short-circuit of the load or wrong wiring may burn or damage the sensor.
- Do not run the wires together with high-voltage lines or power lines or put them in the same raceway. This can cause malfunction due to induction.
- Extension up to total 100 m is possible with 0.3 mm², or more, cable. However, in order to reduce noise, make the wiring as short as possible.

Refer to p.1458~ for general precautions.

Others

- Do not use during the initial transient time (0.5 sec.) after the power supply is switched on.
- Take care that the sensor is not directly exposed to fluorescent light from a rapid-starter lamp or a high frequency light device or sunlight etc., as it may affect the sensing performance.
- Do not touch the lens of the sensor by hand directly. If the lens becomes dirty, wipe it off with a soft cloth gently.
- When the inside lens is steamed up, unscrew the lens to get rid of the condensation.
- · These sensors are only for indoor use.
- Do not use this sensor in places having excessive vapor, dust, etc., or where it may come in direct contact with water, or corrosive gas.
- Take care that the product does not come in contact with water, oil, grease, or organic solvents, such as, thinner, etc.
- Make sure that stress by forcible bend or pulling with 76 N, or more, force is not applied to the sensor cable joint.
- This sensor cannot be used in an environment containing inflammable or explosive gases.
- Never disassemble or modify the sensor.
