

Monolithic Voltage-Controlled Oscillators

General Description

The MAX2622/MAX2623/MAX2624 self-contained voltage-controlled oscillators (VCOs) combine an integrated oscillator and output buffer in a miniature 8-pin μ MAX package.

The inductor and varactor elements of the tank circuits are integrated on-chip, greatly simplifying application of the part. In addition, the center frequency of oscillation and frequency span are factory preset to provide a guaranteed frequency range versus control voltage. An external tuning voltage controls the oscillation frequency. The output signals are buffered by an amplifier stage (easily matched to 50Ω), using only capacitors to provide higher output power and isolate the devices from load impedance variations.

The MAX2622/MAX2623/MAX2624 operate from a +2.7V to +3.3V supply voltage and require only 9mA of supply current. In shutdown mode, the supply current is reduced to 0.1 μ A.

Applications

866MHz to 868MHz European ISM Band (MAX2622)

DECT 1/2 Frequency LO (MAX2623)

902MHz to 928MHz ISM Band, ± 10.7 MHz IF (MAX2623)

902MHz to 928MHz ISM Band, 45MHz to 70MHz IF (MAX2624)

Pin Configuration appears at end of data sheet

Features

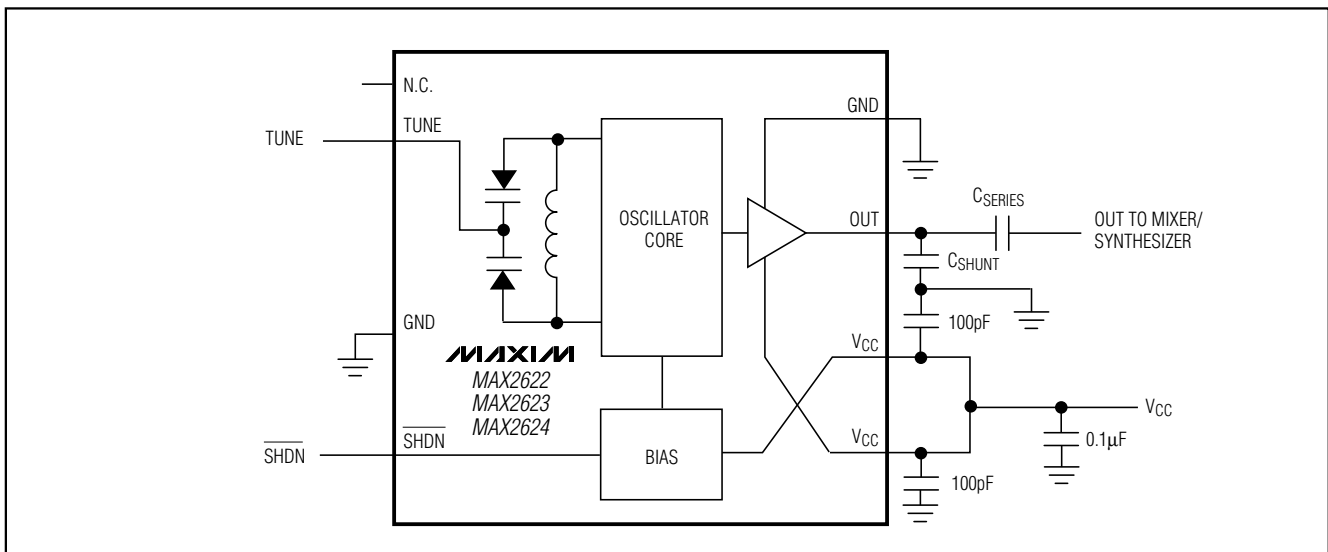

- ◆ Fully Monolithic
- ◆ Guaranteed Performance
- ◆ Wide Choice of Frequencies
 - 855MHz to 881MHz (MAX2622)
 - 885MHz to 950MHz (MAX2623)
 - 947MHz to 998MHz (MAX2624)
- ◆ +2.7V to +3.3V Single-Supply Operation
- ◆ Low-Current Shutdown Mode
- ◆ Smaller than Modules (8-pin μ MAX package)

Ordering Information

| PART | TEMP. RANGE | PIN-PACKAGE |
|-------------|----------------|-------------|
| MAX2622EUA | -40°C to +85°C | 8 μ MAX |
| MAX2623EUA | -40°C to +85°C | 8 μ MAX |
| MAX2624EUA* | -40°C to +85°C | 8 μ MAX |

Typical Operating Circuit

Monolithic Voltage-Controlled Oscillators

ABSOLUTE MAXIMUM RATINGS

| | | | |
|---|-----------------------------------|---|-----------------|
| V _{CC} to GND | -0.3V to +6V | Operating Temperature Range | -40°C to +85°C |
| TUNE, $\overline{\text{SHDN}}$ to GND | -0.3V to (V _{CC} + 0.3V) | Junction Temperature | +150°C |
| OUT to GND | -0.3V to (V _{CC} + 0.6V) | Storage Temperature Range | -65°C to +150°C |
| Continuous Power Dissipation (T _A = +70°C) | | Lead Temperature (soldering, 10sec) | +300°C |
| 8-pin μ MAX (derate 5.7mW/°C above T _A = +70°C)... | 457mW | | |

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

DC ELECTRICAL CHARACTERISTICS

(Typical Operating Circuit, V_{CC} = +2.7V to +3.3V, V_{TUNE} = 1.4V, V $\overline{\text{SHDN}}$ = 2V, OUT = unconnected, T_A = -40°C to +85°C, unless otherwise noted. Typical values are at V_{CC} = +3V, T_A = +25°C.) (Note 1)

| PARAMETER | CONDITIONS | MIN | TYP | MAX | UNITS |
|---|---|------|-----|------|---------|
| Supply Voltage | | 2.7 | | 3.3 | V |
| Supply Current | | | 9 | 11.5 | mA |
| Shutdown Supply Current | V $\overline{\text{SHDN}}$ \leq 0.6V | | 0.1 | 10 | μ A |
| $\overline{\text{SHDN}}$ Input Voltage Low | V _{CC} = 3.3V | | | 0.6 | V |
| $\overline{\text{SHDN}}$ Input Voltage High | V _{CC} = 2.7V | 2.0 | | | V |
| $\overline{\text{SHDN}}$ Input Current Low | V $\overline{\text{SHDN}}$ = 0.6V, V _{CC} = 3.3V | -0.5 | | 0.5 | μ A |
| $\overline{\text{SHDN}}$ Input Current High | V $\overline{\text{SHDN}}$ = 2.0V, V _{CC} = 3.3V | -0.5 | | 0.5 | μ A |
| TUNE Input Current | 0.4V \leq V _{TUNE} \leq 2.4V | | 0.2 | | nA |

AC ELECTRICAL CHARACTERISTICS

(Typical Operating Circuit, V_{CC} = +2.7V to +3.3V, V_{TUNE} = 0.4V to 2.4V, V $\overline{\text{SHDN}}$ = 2V, T_A = +25°C, unless otherwise noted. Typical values measured at V_{CC} = +3V.) (Note 1)

| PARAMETER | CONDITIONS | MIN | TYP | MAX | UNIT |
|----------------------------|--|-----|------|-----|--------------------|
| Oscillator Frequency Range | MAX2622, V _{TUNE} = 0.4V to 2.4V, T _A = -40°C to +85°C | 855 | | 881 | MHz |
| | MAX2623, V _{TUNE} = 0.4V to 2.4V, T _A = -20°C to +75°C | 885 | | 950 | |
| | MAX2624, V _{TUNE} = 0.4V to 2.4V, T _A = -40°C to +85°C | 947 | | 998 | |
| Phase Noise | f _{OFF} = 100kHz | | -101 | | dBc/Hz |
| | f _{OFF} = 1MHz | | -119 | | |
| Noise Floor | | | -156 | | dBm/Hz |
| Tuning Gain (Note 2) | V _{TUNE} = 0.4V to 2.4V | | 80 | 110 | MHz/V |
| Output Power | V _{TUNE} = 0.4V (Note 3) | | -8 | | dBm |
| Return Loss (Notes 3, 4) | | | -12 | | dB |
| Harmonics | | | -30 | | dBc |
| Load Pulling | V _{SWR} = 2:1, all phases | | 0.5 | | MHz _{p-p} |
| Supply Pushing | V _{CC} stepped from 2.8V to 3.3V | | 200 | | kHz/V |

Note 1: Specifications are production tested at T_A = +25°C. Limits over temperature are guaranteed by design and characterization.

Note 2: Maximum tuning gain is measured at V_{TUNE} = 0.4V with a 0.2V step to 0.6V. This represents the worst-case (highest) tuning gain.

Note 3: Measurements taken on MAX262_ EV kit.

Note 4: Return loss is optimized across all frequencies via external shunt/series capacitor matching.

Pin Description

| PIN | NAME | FUNCTION |
|-----|--------------------------|--|
| 1 | N.C. | Not connected. Do not make any connections to this pin. |
| 2 | TUNE | Oscillator Frequency Tuning Voltage Input. High-impedance input with a voltage input range of 0.4V (low frequency) to 2.4V (high frequency) adjustment. |
| 3 | GND | Ground Connection for Oscillator and Biasing. Requires a low-inductance connection to the circuit board ground plane. |
| 4 | $\overline{\text{SHDN}}$ | Shutdown Logic Input. A high-impedance input logic level low disables the device and reduces supply current to 0.1 μ A. A logic level high enables the device. |
| 5 | VCC | Output Buffer DC Supply Voltage Connection. Bypass with a 100pF capacitor to GND for best high-frequency performance. |
| 6 | VCC | Bias and Oscillator DC Supply Voltage Connection. Bypass with a 100pF capacitor to GND for low noise and low spurious content performance from the oscillator. |
| 7 | OUT | Buffered Oscillator Output. DC blocking capacitor required. |
| 8 | GND | Ground Connection for Output Buffer. Requires a low-inductance connection to the circuit board ground plane. |

Detailed Description

Oscillator

The MAX2622/MAX2623/MAX2624 VCOs are implemented as an LC oscillator topology, integrating all of the tank components on-chip. This fully monolithic approach provides an extremely easy-to-use VCO, equivalent to a VCO module. The frequency is controlled by a voltage applied to the TUNE pin, which is internally connected to the varactor. The VCO core uses a differential topology to provide a stable frequency versus supply voltage and improve the immunity to load variations. In addition, there is a buffer amplifier following the oscillator core to provide added isolation from load variations and to boost the output power.

Output Buffer

The oscillator signal from the core drives an output buffer amplifier. The amplifier is constructed as a common-emitter stage with an integrated on-chip pull-up inductor at the output. An external shunt-series capacitor circuit optimizes the match to 50 Ω . The output amplifier has its own VCC and GND pins to minimize load-pulling effects. The amplifier boosts the oscillator signal to a level suitable for driving most RF mixers.

Applications Information

Output Matching

Although the output amplifier internally provides a partial match to 50 Ω , a simple external shunt series capacitor network is needed to optimize the match to 50 Ω . The off-chip capacitors are low-cost surface-mount components. No inductors are required. The capacitors are configured as shown in the *Typical Operating Circuit*. The recommended values of C_{SERIES} and C_{SHUNT} for the MAX2622/MAX2623/MAX2624 are shown in Table 1. A typical application circuit is shown in Figure 1.

Tuning Line

The tuning input is typically connected to the output of the PLL loop filter. The loop filter is presumed to provide an appropriately low-impedance source. It may incorporate an extra RC filter stage to reduce high-frequency noise and spurious signals. Any excess noise on the tuning input is directly translated into FM noise, which can degrade the phase-noise performance of the oscillator. Therefore, it is important to minimize the noise introduced on the tuning input. A simple RC filter with low corner frequency may be needed during testing in order to filter the noise present on the voltage source driving the tuning line.

Monolithic Voltage-Controlled Oscillators

MAX2622/MAX2623/MAX2624

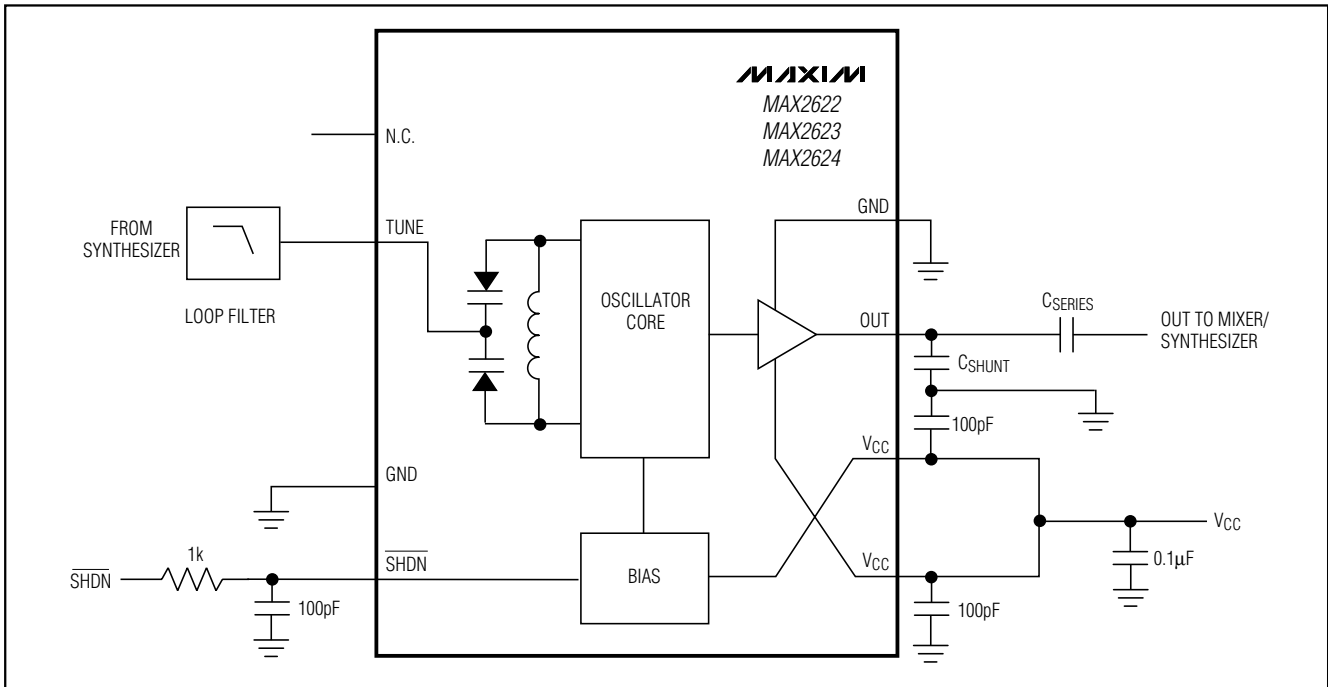

Figure 1. Typical Application Circuit

Table 1. Output Matching Components for 50Ω Match

| DEVICE | C _{SERIES} (pF) | C _{SHUNT} (pF) |
|---------|--------------------------|-------------------------|
| MAX2622 | 2 | 1 |
| MAX2623 | 1.5 | 1 |
| MAX2624 | 1.3 | 0.7 |

Layout Issues

A properly designed PC board is essential to any RF/microwave circuit/system. Always use controlled impedance lines (microstrip, coplanar waveguide, etc.) on high-frequency signals. Always place decoupling capacitors as close to the VCC pins as possible. For long VCC lines, it may be necessary to add additional decoupling capacitors located further from the device. Always provide a low-inductance path to ground. Keep GND vias as close to the device as possible. Thermal reliefs on GND pads are **not** recommended.
