

# Repair Sticks

- durable versatile
- high strength

# WEICON Repair Sticks

The uncomplicated solution for all repair and maintenance work.

Easy to use:

Cut off - knead - use

Always the right portion, even for small repairs.

WEICON Repair Sticks are temperature resistant from -50°C up to +120°C (briefly up to +150°C).

They resist to alcohol, ester, salt water, oils, most acids and lyes, are free of solvents and cure with almost no shrinkage.

The cured product can be machined (drilled, filed, tapped) and overpainted without pre-treatment.

WEICON Repair Sticks bond:

- metal
- hard-plastics\*
- fibre-reinforced materials
- wood
- glass / ceramic / stone

For various applications there are seven different Repair Sticks to chose from.

\* Except for plastics such as polyethylene, polypropylene, polyacetal, polytetrafluoroethylene and other fluorinated hydrocarbons with naturally adhesive-rejecting surfaces.

### Repair Stick ST 115 Titanium

For permanent, <u>high-temperature</u> (briefly +300°C) and <u>wear resistant</u> repairs and bonds of metal parts. Patches and seals cracks, holes, leakages and surface damages on:

- tanks and conduit pipes
- aluminium, light metal and diecast parts
- shafts, bearings, pumps and casings
- reconditioning of defective threads

Suitable as a universal repair compound for hightemperature use.

### Repair Stick ST 115 Steel

Preferably used for quick and <u>high strength</u> repairs and bonds of metal parts. Patches and seals cracks, holes, leakages and surface damages on:

- machine parts
- · tanks and conduit pipes
- · vessels, pumps and housings
- balcony grids
- stair railings
- stripped threads

Suitable as an universal repair compound in the whole D.I.Y. and household sector.

# Repair Stick ST 115 Aluminium

For quick <u>non-rusting</u> repairs and bonds of metal parts. Patches and seals cracks, holes, leakages and surface damages on:

- car bodies
- transmission casings
- window frames and profiles
- boats
- model making (e.g. trains, cars, etc.)

Suitable as an universal repair compound in the whole hobby and garden sector.

# Repair Stick ST 115 Copper

For <u>very quick</u> (pot life 3 min.) repairs of cracks, holes and leakages even on damp and wet surfaces such as:

- · pipes and elbows
- · fittings and flanges
- copper gutters and sheets
- water heaters and water tanks
- hot and cold water piping
- refrigerating and air conditioning equipment and as a repair compound for the installation and maintenance sector.

### Repair Stick ST 115 Plastic

Especially for durable repairs of plastic parts\* and fibre reinforced materials (GFRP, CFRP, fibre glass) with residual elasticity as well as for bondings of metal parts.

- pipes and pipe elbows
- · fittings and flanges
- water tanks
- · window and door frames
- pumps and pump housings
- · coverings and bumpers

<sup>\*</sup> except for plastics such as PE, PP, PTFE, etc.

## Repair Stick ST 56 Wood

For permanent and <u>elastic</u>, non-shrink repairs of wooden parts. Patches cracks and bore holes, fills broken out or broken off wooden parts, seals gaps on:

- window and door frames
- veneers
- timber boards and planks
- model making (airplanes, ships, etc.)
- wooden toys

Suitable as an universal repair compound in the whole household and hobby sector.

## Repair Stick ST 115 Aqua

Ideal for quick repairs on <u>damp and wet surfaces and</u> <u>for underwater applications.</u>

Patches and seals cracks, holes, leakages and surface damages on:

- fuel and water tanks
- radiators
- electrical switchboards
- sanitary installations
- swimming pools

and in the marine sector.

# Type selection table

|  | Titanium | Steel | Aluminium | Copper | Plastic | Aqua | Wood |
|--|----------|-------|-----------|--------|---------|------|------|
| Metals (e.g. aluminium, cast iron, brass, stainless steel) | ++       | ++    | ++        | ++     | +       | ++   | +    |
| Hard plastics* (e.g. epoxy resin, rigid PVC)               | +        | +     | +         | +      | ++      | ++   | +    |
| Fibre-reinforced materials (e.g. GFRP, CFRP, fibreglass)   | +        | +     | +         | +      | ++      | +    | +    |
| Wood (e.g oak, beech, spruce, balsa)                       | +        | +     | +         | +      | +       | +    | ++   |
| Derived timber products (e.g. plywood, MDF)                | +        | +     | +         | +      | +       | +    | ++   |
| Glass, ceramics  | +        | +     | +         | +      | +       | ++   | +    |
| Stone (e.g. marble, granite, brick, concrete)              | +        | +     | +         | +      | +       | ++   | +    |
| Rubber / elastomers  | -        | -     | -         | -      | -       | -    | -    |

<sup>(++)</sup> Highly suitable (+) Suitable (-) Not suitable

Except for plastics such as polyethylene, polypropylene, polyacetal, polytetrafluoroethylene and other fluorinated hydrocarbons with naturally adhesive-rejecting surfaces. Within the framework of the above type recommendations, bonding of dissimilar material pairs such as metals and plastics is also possible.

| Electrical resistance (ASTM D 257):                    |   | 5 · 10 <sup>11</sup> Ω/cm                    |   |   |                                      |                                       |                                 |                                       |                       |  |  |  |
| Dielectric strength (ASTM D 149):                      |   |  | 3,0 kV/mm                                   |   |                                      |                                       |                                 |                                       |                       |  |  |  |
| Thermal expansion coefficient (ISO 11359):             |   |  | 30-40 x 10 <sup>-6</sup> k <sup>-1</sup>    |   |                                      |                                       |                                 |                                       |                       |  |  |  |

<sup>\*1</sup> For easier workability when ambient temperatures are low, the sticks should be warmed up to room temperature (20°C) before application.
\*2 Max. 15 mm per procedure
\*3 Measured on a casting 900 x 75 x 10 mm after 7 days stored at +20°C.

#### Instructions for use

To ensure a perfect bond, the surfaces to be joined must be clean and dry (e.g., clean and degrease using Cleaner S or Plastic Cleaner). Smooth surfaces should be roughened, e.g. by sandblasting.

WEICON Repair-Sticks cover gaps of max. 15 mm per procedure. The pot life given is for a material quantity of 25 g at room temperature. If larger quantities are used, the curing time will be faster due to the typical reaction heat of epoxy resins (exothermic reaction).

Similarly, higher ambient temperatures shorten the cure time (as a rule of thumb, every +10°C increase above room temperature will halve working and curing time). Temperatures below +16°C will extend working and curing times considerably, while below about +5°C, no reaction will take place at all.

#### Physiological properties / health and safety at work

WEICON Repair Sticks, when properly handled and completely cured, are toxicologically essentially harmless. When using these adhesives, the physical, safety technical, toxicological and ecological data and regulations in our EC safety data sheets (www.weicon.de) must be observed.

#### Storage

When kept at a constant room temperature of about +20°C and unopened in dry conditions, WEICON Repair Sticks will keep for at least 18 months. Avoid direct sunlight.

## Chemical resistance of WEICON Repair Sticks after curing \*

| Acetic acid dilute < 5%                        | +             | Hydrocarbons, aliphatic (crude oil derivatives)          | +                  |
