## 1. Products and Application

This specification defines general specification and performance for LED Linear module. Samsung Linear Modules target to replace conventional fluorescent lamps as T5, T8 and so on with LED solutions. Due to transferring LED, new luminaire transferred to LED can take more energy saving and longer life-time.

In special, Samsung has competitiveness in middle-power solutions. This module uses LM561B. Middle power solutions provide more homogeneous and higher efficient lights. Linear module has been designed to expand length simply and adopt easy connection way.

This F-series have high lumen performance and it's suitable for high-bay or low-bay applications of industrial site such as warehouse, plant and so on.

## 2. Specification

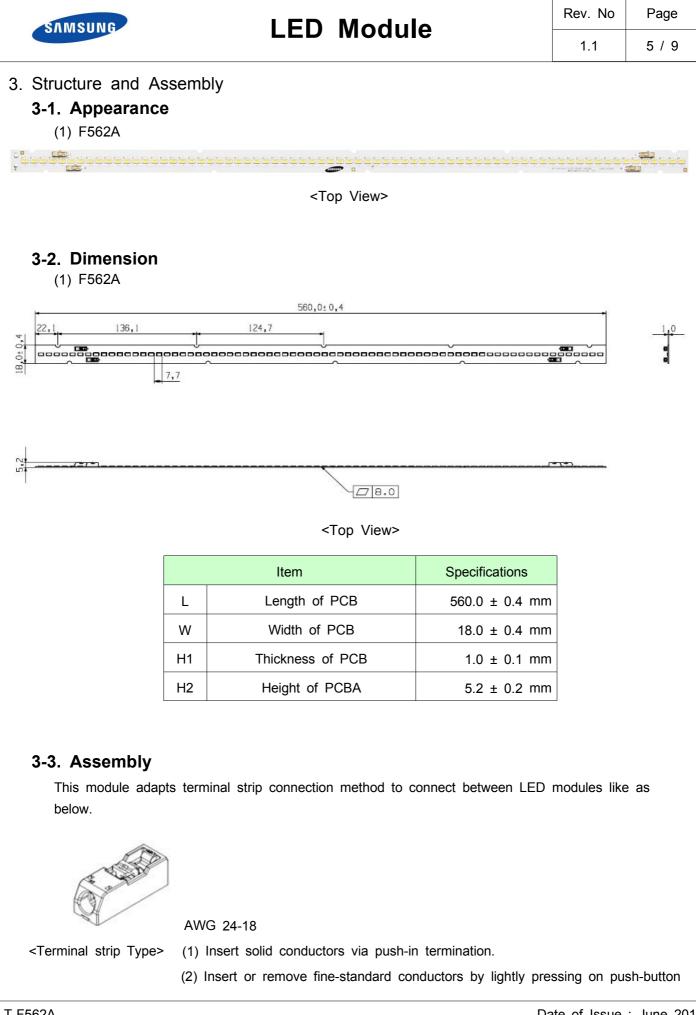

No.	Item	Specifications	Unit	Remark
2-1	Dimension	560.0(L) × 18.0(W) × 5.2(h) mm	mm	Tolerance:±0.4mm
2-2	Weight	48.0 (g)	g	Tolerance:±2.4(g)
2-3	Rated lifetime	> 50,000	hour	L70B50 @Tc = 85℃
2-4	Ingress Protection	N/A	-	-
2-5	Operating Temperature	Ta = - 20 ~ 70	Ĵ	-
2-6	Storage Temperature	Ta = - 35 ~ 85	C	-

5-2 Pallet : 1100(L) x 1100(W) x 130(h) mm

# 6. Precautions In Handling

1) LED Lighting for white light are devices which are materialized by combining white LEDs. The color of white light can differ a little unusually to diffuser plate(sign-board panel).

#### 2) Handling

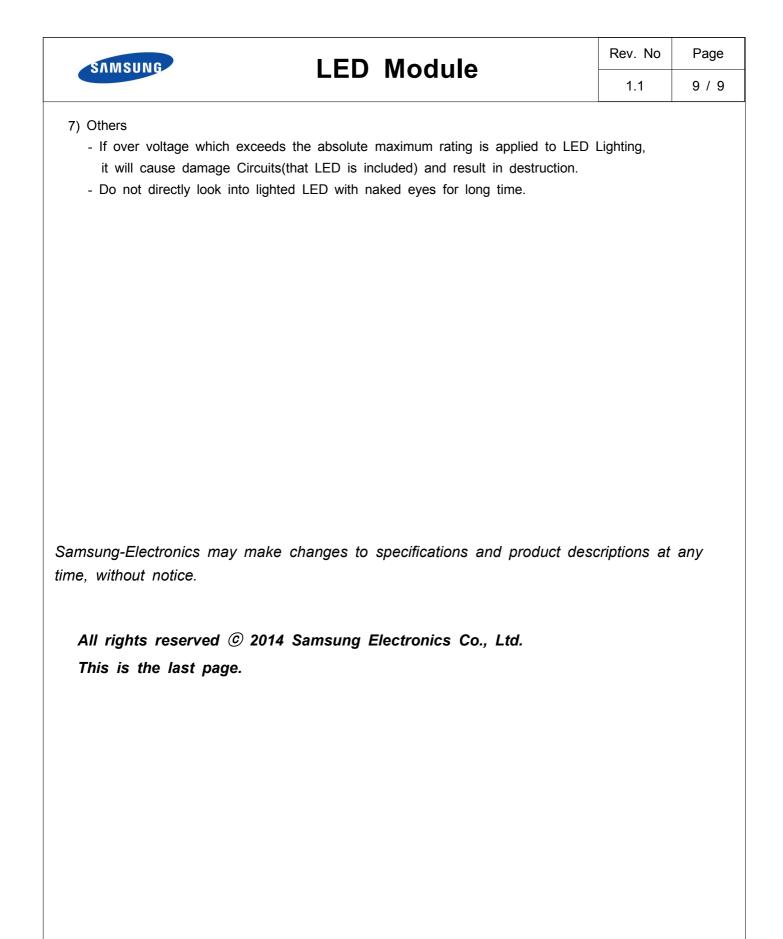

- Don't drop the unit and don't give the unit any shocks.
- Don't storage the Module in a dusty place or room.
- Don't take the unit to pieces.

#### 3) Cleaning

- This LED Module should not be used in any type of fluid such as oil, organic solvent, etc.
- It is recommended that IPA(Isopropyl Alcohol) be used as a solvent for cleaning the LED Module.
- When using other solvents, it should be confirmed beforehand whether the solvents will dissolve the package and the resin or not. Freon solvents should not be used to clean the LEDs because of worldwide regulations. Do not clean the LED Module by the ultrasonic.
- Before cleaning, a pre-test should be done to confirm whether any damage to the LED Lighting will occur.

#### 4) Static Electricity

- Static electricity or surge voltage damages the LED Lighting.
- 5) Discoloration
  - VOCs (volatile organic compounds) may be occurred by adhesives, flux, hardener or organic additives which is used in luminaires (fixture) and LED silicone bags are permeable to it. It may lead a discoloration when LED expose to heat or light.
  - This phenomenon can give a significant loss of light emitted(output) from the luminaires(fixtures).
  - In order to prevent these problems, we recommend you to know the physical properties for the materials used in luminaires, it requires to select carefully.
- 6) Risk of Sulfurization (or Tarnishing)
  - The lead frame from Samsung Electronics is a plated package and it may change to black (or dark colored) when it is exposed to Ag (a), Sulfur (S), Cchlorine (Cl) or other halogen compound. It requires attention.
  - Sulfide (Sulfurization) of the lead frame may cause a change of degradation intensity, chromaticity coordinates and it may cause open circuit in extreme cases. It requires attention.
  - Sulfide (Sulfurization) of the lead frame may cause of storage and using with oxidizing substances together. Therefore, LED is not recommend to use and store with the below list.
    - : Rubber, Plain paper, lead solder cream etc.
