The DPM 500-BL uses advanced components and construction techniques to provide a uniquely compact unit. The meter is in a 40 pin DIL integrated circuit format that can be plugged directly into a DIL socket or panel mounted using the snap in bezel.

- **12.5mm** (0.5") Digit Height
- Programmable Decimal Points
- Auto-zero
- Auto-polarity
- **200mV** d.c. Full Scale Reading (F.S.R.)
- LED Backlit
- Annunciators

SCALING

Two resistors Ra and Rb may be fitted in order to alter the full scale reading (ES.R.) of the meter - see table. Meter will need re-calibration.

Required F.S.R.		Ra	Rb	
2V	Note	910k	100k	
20V	Note	1M	10k	
200V	Note	1M	1k	
2kV	Note	1M	100R	
200μΑ		OR	1k	
2mA		OR	100R	
20mA		0R	10R	

OR

1R

200mA NOTE

Ensure link 10 is cut if fitting Ra.

Backlit Version	_	_	Stock Number DPM 500-BL		
Specification	Min.	Тур.	Max.	Unit	
Accuracy (overall error)*		0.05	0.1	% (±1 count)	
Linearity			±1	count	
Sample rate		3		sample/sec	
Operating temperature range	0		50	°C	
Temperature stability		100		ppm/°C	
Supply voltage	7.5	9	14	V	
Supply current		150		μА	
Backlight voltage		5		V	
Backlight current		30	60	mA	
Input leakage current (Vin = 0V)		1	10	рА	

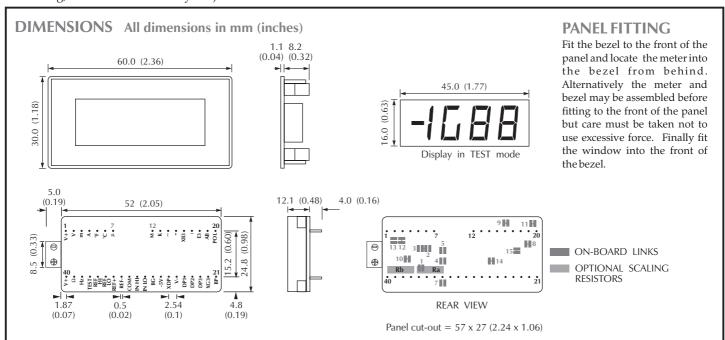

^{*} To ensure maximum accuracy, re-calibrate periodically.

CONNECTOR SOURCING GUIDE

METHOD	40 Pin DIL IC Socket

SAFETY

To comply with the Low Voltage Directive (LVD 93/68/EEC), input voltages to the module's pins must not exceed 60Vdc. If voltages to the measuring inputs do exceed 60Vdc, then fit scaling resistors externally to the module. The user must ensure that the incorporation of the DPM into the user's equipment conforms to the relevant sections of BS EN 61010 (Safety Requirements for Electrical Equipment for Measuring, Control and Laboratory Use).

PIN FUNCTIONS

- 1,40. V+ Positive power supply.
- 2-7,12-14,17,38,39 See SPECIAL NOTE: ANNUNCIATORS.
- 15. Input for the polarity annunciator. Internally linked to POL (pin 20). If this is to be externally controlled, cut link 11.
- 16, 18, 19, 22 XB3, E3, AB, XG3. Outputs for use in auto-ranging applications.
- 20. POL Drive for "-" annunciator. Internally connected by link 11.
- 21. BP LCD backplane drive waveform.
- 23. DP3 1.999 \(\bar{1} \)
- 24. DP2 19.99 -See SPECIAL NOTE: ANNUNCIATORS.
- 25. DP1 199.9
- 26. V- Negative power supply.
- 27. XDP Connect to required annunciators/DPs (see note).
- 28. -5V Not connected.
- 29. BG Input for bandgap reference. (1.22V nom).
- 30. INLO
 Negative measuring input.
 Negative measuring input.
 Analogue inputs must be no closer than 1V to either the positive or negative supply.
 Analogue inputs must be no closer than 1V to either the positive or negative supply.
- 32. COM The ground for the analogue section of the A/D converter, held actively at 2.8V (nom) below V+. COM must not be allowed to sink excessive current (> 100µA) by connecting it directly to a higher voltage.
- 33. REF- Negative output from internal reference.
- 34. REF+ Positive output from internal reference.
- $35. \ \ REFLO \qquad Negative input for reference voltage.$
- 36. REF HI Positive input for reference voltage.
- $37. \ \ TEST \qquad Connecting this pin to V+ turns on the segments as illustrated. \ It should not be operated for more than a few seconds as the DC$
 - $voltage\ applied\ to\ the\ LCD\ may\ "burn"\ the\ display.\ This\ pin\ is\ nominally\ at\ 5V\ below\ V+\ and\ is\ the\ ground\ for\ the\ digital\ section$
 - $of the \, meter, it \, can \, be \, used \, as \, a \, negative \, supply \, to \, power \, external \, logic \, up \, to \, a \, maximum \, of \, 1mA.$
- 40. V+/CLK Normally tied to V+ via Link 12 but can be used to over ride the internal oscillator and control the sample rate by cutting Link 12 and making Link 13.

 $\textbf{LED BACKLIT VERSIONS:} \ Apply 5VDC \ to \ the \ backlight \ tab \ on \ the \ side \ of \ the \ meter. \ Typical \ current \ is \ 30mA. \ For \ higher \ voltages, \ fit \ a \ resistor \ in \ series. \ E.g. \ For 9V \ use \ 150R. \ Maximum \ current \ = \ 60mA.$

ANNUNCIATORS: The DPM annunciators (DPs, °C, etc.) can be displayed by connecting them to XDP. However as these annunciators are normally 'floating', under certain conditions they may appear when not wanted. To suppress unwanted annunciators, link them to the backplane (BP). If the annunciators are being switched, connect them via a 1M resistor to the BP (pin 21). The annunciators will then operate normally when connected to XDP. Ensure that an annunciator is not connected directly to the XDP and BP at the same time.

VARIOUS OPERATING MODES

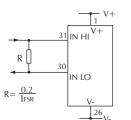

ON-BOARD LINKS: In order to quickly and easily change operating modes for different applications, the meter has several "on-board links". They are designed to be easily opened(cut) or shorted (soldered). Do not connect more than one meter to the same power supply if the meters cannot use the same signal ground. Taking any input beyond the power supply rails will damage the meter.

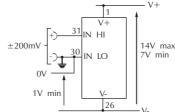

Links 1, 2, 3 & 4 SHORTED.

Measuring a floating voltage source of 200mV full scale.

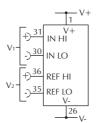

Links 1, 2, 3, 4 SHORTED.

Measuring current (supply MUST be isolated).

Links 1, 3 & 4 SHORTED.

Split supply operation.

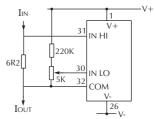

Measuring the ratio of two voltages. Reading = $1000 \text{ V}_1/\text{V}_2$

Issue 6

 $50 \text{mV} < V_2 < 200 \text{mV}$

 $V_1 < 2V_2$.

Links 1, 3 & 4 SHORTED.

Measuring 4-20mA to read 0-999 (supply must be isolated).
