Dimensions with Insulation Cover

The following dimensions apply to the rectangular pushbutton unit. After mounting the switch on a panel, and after tightening the mounting nut, insert the lead wires into the hole on the insulation cover before wiring. Align the insulation cover so that the cylindrical portion of the insulation cover will face the switch unit. This means that the lead wires will be inserted from the barrier side of the insulation cover. After wiring has been completed, slide the insulation cover over the switch unit.

Assembly/Disassembly

Mounting and Replacing Pushbutton Unit

Mounting directions for the LED/lamp and pushbutton unit

The OMRON Pushbutton Unit doubles the roles in which a pushbutton switch is normally used. The pushbutton unit may be inserted one of two ways:

1. For operation as a lighted pushbutton switch, fit the LED/lamp so that its guide projection is inserted into the wider opening in the receptacle of the pushbutton unit.

2. For operation as an indicator unit, insert the LED/lamp guide projection into the narrower opening in the indicator unit's receptacle. Push the projection of the LED/lamp in the groove of the pushbutton unit so that the LED/lamp is firmly inserted into the pushbutton unit of the indicator unit.

Note: The inserting direction of the LED/lamp for the pushbutton unit is the opposite of that for the indicator unit. Pay attention to the mounting direction of the legend plate.

Removing the Pushbutton Unit

With your thumb and forefinger, while holding the recessed portions on both sides, firmly and steadily pull out the top of the pushbutton unit. Pulling out the cap with pliers or a similar tool will damage the cap.

Mounting Switch Unit on Panel

Nut Mounting

- Insert the switch unit from the front of the panel and tighten the mounting nut inserted from the rear of the panel.
- Since a projection exists on the rear portion of the switch unit, if the mounting nut cannot be fitted into position, turn the nut slightly.
- The tightening torque of the mounting nut should be less than 5 kg-cm.
- Solder the terminals after mounting the nut. Otherwise, the terminals, when thickened by solder, may prevent the nut from being screwed down onto the switch unit.

Wiring

- Finish soldering within 5 seconds with a 30 watt soldering iron, or within 3 seconds at a solder temperature of 240°C. For about a minute after soldering, do not apply any force to the switch unit, to avoid deforming the softened plastic switch unit base.
- Use a non-corrosive, resin-based soldering flux.

Construction

ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.

To convert millimeters into inches, multiply by 0.03937. To convert grams into ounces, multiply by 0.03527.
