## PC123J000000F Series

## Description

PC123J00000F Series contains an IRED optically coupled to a phototransistor.

It is packaged in a 4-pin DIP, available in wide-lead spacing option and SMT gullwing lead-form option.

Input-output isolation voltage(rms) is 5.0 kV .
CTR is $50 \%$ to $400 \%$ at input current of 5 mA .

## ■ Features

1. 4-pin DIP package
2. Double transfer mold package (Ideal for Flow Soldering)
3. Current transfer ratio (CTR : MIN. $50 \%$ at $\mathrm{I}_{\mathrm{F}}=5 \mathrm{~mA}$, $V_{\text {CE }}=5 \mathrm{~V}$ )
4. Several CTR ranks available
5. Reinforced insulation type (Isolation distance : MIN. 0.4 mm )
6. Long creepage distance type (wide lead-form type only : MIN. 8mm)
7. High isolation voltage between input and output $\left(\mathrm{V}_{\text {iso(rms) }}: 5.0 \mathrm{kV}\right.$ )
8. Lead-free and RoHS directive compliant

## DIP 4pin Reinforced Insulation Type Photocoupler

## Agency approvals/Compliance

1. Recognized by UL1577 (Double protection isolation), file No. E64380 (as model No. PC123)
2. Approved by BSI, BS-EN60065, file No. 7087, BSEN60950 file No. 7409, (as model No. PC123)
3. Approved by SEMKO, EN60065, EN60950, (as model No. PC123)
4. Approved by DEMKO, EN60065, EN60950 (as model No. PC123)
5. Approved by NEMKO, EN60065, EN60950, (as model No. PC123)
6. Approved by FIMKO, EN60065, EN60950, (as model No. PC123)
7. Recognized by CSA file No. CA95323 (as model No. PC123)
8. Approved by VDE (DIN EN60747-5-2 ${ }^{(*)}$ ) (as an option), file No. 40008087 (as model No. PC123)
9. Package resin : UL flammability grade ( $94 \mathrm{~V}-0$ )
${ }^{(*)}$ DIN EN60747-5-2 : successor standard of DIN VDE0884

## Applications

1. I/O isolation for MCUs (Micro Controller Units)
2. Noise suppression in switching circuits
3. Signal transmission between circuits of different potentials and impedances
4. Over voltage detection

Design Considerations

## - Design guide

While operating at $\mathrm{I}_{\mathrm{F}}<1.0 \mathrm{~mA}$, CTR variation may increase.
Please make design considering this fact.
This product is not designed against irradiation and incorporates non-coherent IRED.

## - Degradation

In general, the emission of the IRED used in photocouplers will degrade over time.
In the case of long term operation, please take the general IRED degradation ( $50 \%$ degradation over $5 y e a r s$ ) into the design consideration.

## - Recommended Foot Print (reference)

SMT Gullwing lead-form

Wide SMT Gullwing lead-form

(Unit : mm)

## Manufacturing Guidelines

## - Soldering Method

## Reflow Soldering:

Reflow soldering should follow the temperature profile shown below.
Soldering should not exceed the curve of temperature profile and time.
Please don't solder more than twice.

## Flow Soldering :

Due to SHARP's double transfer mold construction submersion in flow solder bath is allowed under the below listed guidelines.

Flow soldering should be completed below $270^{\circ} \mathrm{C}$ and within 10 s.
Preheating is within the bounds of 100 to $150^{\circ} \mathrm{C}$ and 30 to 80 s .
Please don't solder more than twice.

## Hand soldering

Hand soldering should be completed within 3 s when the point of solder iron is below $400^{\circ} \mathrm{C}$.
Please don't solder more than twice.

## Other notices

Please test the soldering method in actual condition and make sure the soldering works fine, since the impact on the junction between the device and PCB varies depending on the tooling and soldering conditions.

## Cleaning instructions

## Solvent cleaning:

Solvent temperature should be $45^{\circ} \mathrm{C}$ or below Immersion time should be 3 minutes or less

## Ultrasonic cleaning:

The impact on the device varies depending on the size of the cleaning bath, ultrasonic output, cleaning time, size of PCB and mounting method of the device.
Therefore, please make sure the device withstands the ultrasonic cleaning in actual conditions in advance of mass production.

## Recommended solvent materials:

Ethyl alcohol, Methyl alcohol and Isopropyl alcohol
In case the other type of solvent materials are intended to be used, please make sure they work fine in actual using conditions since some materials may erode the packaging resin.

## - Presence of ODC

This product shall not contain the following materials.
And they are not used in the production process for this product.
Regulation substances: CFCs, Halon, Carbon tetrachloride, 1.1.1-Trichloroethane (Methylchloroform)
Specific brominated flame retardants such as the PBB and PBDE are not used in this product at all.
This product shall not contain the following materials banned in the RoHS Directive.
-Lead, Mercury, Cadmium, Hexavalent chromium, Polybrominated biphenyls (PBB), Polybrominated diphenyl ethers (PBDE).

## Package specification

## Sleeve package

1. Through-Hole

Package materials
Sleeve : HIPS (with anti-static material)
Stopper: Styrene-Elastomer
Package method
MAX. 100pcs of products shall be packaged in a sleeve. Both ends shall be closed by tabbed and tabless stoppers.
The product shall be arranged in the sleeve with its anode mark on the tabless stopper side.
MAX. 20 sleeves in one case.
Sleeve outline dimensions

(Unit : mm)

## 2. Wide Through-Hole

Package materials
Sleeve : HIPS (with anti-static material)
Stopper: Styrene-Elastomer
Package method
MAX. 100pcs of products shall be packaged in a sleeve. Both ends shall be closed by tabbed and tabless stoppers.
The product shall be arranged in the sleeve with its anode mark on the tabless stopper side.
MAX. 20 sleeves in one case.

- The circuit application examples in this publication are provided to explain representative applications of SHARP devices and are not intended to guarantee any circuit design or license any intellectual property rights. SHARP takes no responsibility for any problems related to any intellectual property right of a third party resulting from the use of SHARP's devices.
- Contact SHARP in order to obtain the latest device specification sheets before using any SHARP device. SHARP reserves the right to make changes in the specifications, characteristics, data, materials, structure, and other contents described herein at any time without notice in order to improve design or reliability. Manufacturing locations are also subject to change without notice.
- Observe the following points when using any devices in this publication. SHARP takes no responsibility for damage caused by improper use of the devices which does not meet the conditions and absolute maximum ratings to be used specified in the relevant specification sheet nor meet the following conditions:
(i) The devices in this publication are designed for use in general electronic equipment designs such as:
--- Personal computers
--- Office automation equipment
--- Telecommunication equipment [terminal]
--- Test and measurement equipment
--- Industrial control
--- Audio visual equipment
--- Consumer electronics
(ii) Measures such as fail-safe function and redundant design should be taken to ensure reliability and safety when SHARP devices are used for or in connection
with equipment that requires higher reliability such as:
--- Transportation control and safety equipment (i.e., aircraft, trains, automobiles, etc.)
--- Traffic signals
--- Gas leakage sensor breakers
--- Alarm equipment
--- Various safety devices, etc.
(iii) SHARP devices shall not be used for or in connection with equipment that requires an extremely high level of reliability and safety such as:
--- Space applications
--- Telecommunication equipment [trunk lines]
--- Nuclear power control equipment
--- Medical and other life support equipment (e.g., scuba).
- If the SHARP devices listed in this publication fall within the scope of strategic products described in the Foreign Exchange and Foreign Trade Law of Japan, it is necessary to obtain approval to export such SHARP devices.
