

# SY89200U

## Ultra-Precision 1:8 LVDS Fanout Buffer with Three $\div 1/\div 2/\div 4$ Clock Divider Output Banks

Revision 6.0

### General Description

The SY89200U is a 2.5V precision, high-speed, integrated clock divider and LVDS fanout buffer capable of handling clocks up to 1.5GHz. Optimized for communications applications, the three independently controlled output banks are phase matched and can be configured for pass through ( $\div 1$ ),  $\div 2$  or  $\div 4$  divider ratios.

The differential input includes Micrel's unique, 3-pin input termination architecture that allows the user to interface to any differential signal path. The low-skew, low-jitter outputs are LVDS-compatible with extremely fast rise/fall times guaranteed to be less than 150ps.

The EN (enable) input guarantees that the  $\div 1$ ,  $\div 2$  and  $\div 4$  outputs will start from the same state without any runt pulse after an asynchronous master rest (MR) is asserted. This is accomplished by enabling the outputs after a four-clock delay to allow the counters to synchronize.

The SY89200U is part of Micrel's Precision Edge<sup>®</sup> product family.

Datasheets and support documentation are available on Micrel's web site at: [www.micrel.com](http://www.micrel.com).

### Functional Block Diagram

Precision Edge<sup>®</sup>

### Features

- Three low-skew LVDS output banks with programmable  $\div 1$ ,  $\div 2$  and  $\div 4$  divider options
- Three independently programmable output banks
- Guaranteed AC performance over temperature and voltage:
  - Accepts a clock frequency up to 1.5GHz
  - <900ps IN-to-OUT propagation delay
  - <150ps rise/fall time
  - <50ps bank-to-bank phase offset
- Ultra-low jitter design:
  - <1ps<sub>RMS</sub> random jitter
  - <10ps<sub>PP</sub> total jitter (clock)
- Patent-pending input termination and VT pin accepts DC- and AC-coupled inputs (CML, PECL, LVDS)
- LVDS-compatible outputs
- CMOS/TTL-compatible output enable (EN) and divider select control
- 2.5V  $\pm 5\%$  power supply
- $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$  temperature range
- Available in 32-pin (5mm x 5mm) QFN package

### Applications

- All SONET/SD applications
- All Fibre Channel applications
- All Gigabit Ethernet applications

## Pin Configuration

## Pin Description

| Pin Number                         | Pin Name                                | Pin Function   |
|------------------------------------|---|--|
| 3, 6                               | IN, /IN                                 | Differential Input: This input pair is the differential signal input to the device. This input accepts AC- or DC-coupled signals as small as 100mV. The input pair internally terminates to a VT pin through 50Ω. Note that these inputs will default to an indeterminate state if left open. Please refer to the “Input Interface Applications” section for more details. |
| 2<br>7<br>8                        | DIVSEL1<br>DIVSEL2<br>DIVSEL3           | Single-Ended Inputs: These TTL/CMOS inputs select the device ratio for each of the three banks of outputs. Note that each of these inputs is internally connected to a 25kΩ pull-up resistor and will default to logic HIGH state if left open. The input-switching threshold is $V_{CC}/2$ .  |
| 4                                  | VT                                      | Input Termination Center-Tap: Each side of the differential input pair terminates to the VT pin. The VT pin provides a center-tap to a termination network for maximum interface flexibility. See “Input Interface Applications” section for more details.   |
| 5                                  | VREF-AC                                 | Reference Voltage: This output biases to $V_{CC}-1.2V$ . It is used for AC-coupling inputs IN and /IN. For AC-coupled applications, connect VREF-AC directly to the VT pin. Bypass with 0.01μF low ESR capacitor to VCC. Maximum sink/source capability is 0.5mA.  |
| 9                                  | EN                                      | Single-Ended Input: This TTL/CMOS input disable and enable the Q0 – Q7 outputs. This input is internally connected to a 25kΩ pull-up resistor and will default to logic HIGH state if left open. The input-switching threshold is $V_{CC}/2$ . For the input enable and disable functional description, refer to Figures 2a through 2c.                                    |
| 30, 29, 28<br>27, 26, 25<br>24, 23 | Q0, /Q0, /Q1<br>/Q1, Q2, /Q2<br>Q3, /Q3 | Bank 1 LVDS differential output pairs controlled by DIVSEL1: LOW Q0 – Q3 = ÷1 HIGH, Q0 – Q3 = ÷2. Unused output pairs should be terminated with 100Ω across the differential pair.   |
| 16, 15, 14<br>13, 12, 11           | Q4, /Q4, Q5<br>/Q5, Q6, /Q6             | Bank 2 LVDS differential output pairs controlled by DIVSEL2: LOW Q4 – Q6 = ÷2 HIGH, Q4 – Q6 = ÷4. Unused output pairs should be terminated with 100Ω across the differential pair.   |
| 18, 17                             | Q7, /Q7                                 | Bank 3 LVDS differential output pairs controlled by DIVSEL3: LOW Q7 = ÷2 HIGH. Q7 = ÷4. Unused output pairs should be terminated with 100Ω across the differential pair.   |
| 32                                 | /MR                                     | Single-Ended Input: This TTL/CMOS-compatible master reset function asynchronously sets Q0 – Q7 outputs LOW, /Q0 – /Q7 outputs HIGH, and holds them in that state as long as /MR remains LOW. This input is internally connected to a 25kΩ pull-up resistor and will default to a logic HIGH state if left open. The input-switching threshold is $V_{CC}/2$ .              |
| 10, 19, 22, 31                     | VCC                                     | Positive power supply. Bypass with 0.1μF  0.01μF low ESR capacitors.   |
| 1, 20, 21                          | GND<br>Exposed                          | Ground and exposed pad must be connected to the same GND plane on the board.   |

## Truth Table

| $\overline{\text{MR}}^{(3)}$ | $\text{EN}^{(4, 5)}$ | DIVSEL1 | DIVSEL2 | DIVSEL3 | Q0 – Q3  | Q4 – Q6  | Q7       |
|------------------------------|----------------------|---------|---------|---------|----------|----------|----------|
| 0                            | X                    | X       | X       | X       | 0        | 0        | 0        |
| 1                            | 0                    | X       | X       | X       | 0        | 0        | 0        |
| 1                            | 1                    | 0       | 0       | 0       | $\div 1$ | $\div 2$ | $\div 2$ |
| 1                            | 1                    | 1       | 1       | 1       | $\div 2$ | $\div 4$ | $\div 4$ |

**Notes:**

3.  $\overline{\text{MR}}$  asynchronously forces Q0 – Q7 LOW ( $\overline{\text{Q0}} - \overline{\text{Q7}}$  HIGH).
4. EN forces Q0 – Q7 LOW between 2 and 6 input clock cycles after the falling edge of EN. Refer to Timing Diagram section.
5. EN synchronously enables the outputs between two and six input clock cycles after the rising edge of EN. Refer to Timing Diagram section.

### Absolute Maximum Ratings<sup>(6)</sup>

|  |                   |
|--|-------------------|
| Supply Voltage ( $V_{CC}$ )              | -0.5V to +4.0V    |
| Input Voltage ( $V_{IN}$ )               | -0.5V to $V_{CC}$ |
| Termination Current <sup>(8)</sup>       |                   |
| Source or sink current on $V_T$          | $\pm 100$ mA      |
| Output Current <sup>(8)</sup>            |                   |
| Source or sink current on $I_N$ , $/I_N$ | $\pm 50$ mA       |
| $V_{REF-AC}$ Current <sup>(8)</sup>      |                   |
| Source or sink current on $V_{REF-AC}$   | $\pm 2$ mA        |
| Lead Temperature (soldering, 20s)        | 260°C             |
| Storage Temperature ( $T_s$ )            | -65°C to +150°C   |

### Operating Ratings<sup>(7)</sup>

|   |                    |
|---|--------------------|
| Supply Voltage ( $V_{CC}$ )               | +2.375V to +2.625V |
| Ambient Temperature ( $T_A$ )             | -40°C to +85°C     |
| Package Thermal Resistance <sup>(9)</sup> |                    |
| QFN ( $\theta_{JA}$ ) Still-Air           | 35°C/W             |
| QFN ( $\Psi_{JB}$ ) Junction-to-Board     | 20°C/W             |

### DC Electrical Characteristics<sup>(10)</sup>

$T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$ , unless otherwise stated.

| $V_{REF-AC}$   | Reference Voltage                                    |                                  | $V_{CC}-1.3$ | $V_{CC}-1.2$ | $V_{CC}-1.1$ | V        |
| IN-to- $V_T$   | Voltage from Input to $V_T$                          |                                  |              |              | 1.8          | V        |

**Notes:**

- Exceeding the absolute maximum ratings may damage the device.
- The device is not guaranteed to function outside its operating ratings.
- Due to the limited drive capability use for input of the same package only.
- Package thermal resistance assumes exposed pad is soldered (or equivalent) to the device's most negative potential on the PCB.  $\Psi_{JB}$  uses 4-layer  $\theta_{JA}$  in still-air, unless otherwise stated.
- The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.
- Includes current through internal 50 $\Omega$  pull-up.

## LVTTL/CMOS DC Electrical Characteristics<sup>(10)</sup>

$V_{CC} = 2.5V \pm 5\%$ ;  $T_A = -40^\circ C$  to  $+85^\circ C$ , unless otherwise stated.

| Symbol   | Parameter          | Condition | Min. | Typ. | Max. | Units   |
|----------|--------------------|-----------|------|------|------|---------|
| $V_{IH}$ | Input HIGH Voltage |           | 2.0  |      |      | V       |
| $V_{IL}$ | Input LOW Voltage  |           |      |      | 0.8  | V       |
| $I_{IH}$ | Input HIGH Current |           | -125 |      | 30   | $\mu A$ |
| $I_{IL}$ | Input Low Current  |           |      |      | -300 | $\mu A$ |

## LVDS Output DC Electrical Characteristics<sup>(12)</sup>

$V_{CC} = 2.5V \pm 5\%$ ;  $T_A = -40^\circ C$  to  $+85^\circ C$ ;  $R_L = 100\Omega$  across Q and /Q, unless otherwise stated.

| Symbol           | Parameter                                    | Condition | Min.  | Typ. | Max.  | Units |
|------------------|--|-----------|-------|------|-------|-------|
| $V_{OH}$         | Output HIGH Voltage; (Q, /Q)                 |           |       |      | 1.475 | V     |
| $V_{OL}$         | Output LOW Voltage; (Q, /Q)                  |           | 0.925 |      |       | V     |
| $V_{OUT}$        | Output Voltage Swing; (Q, /Q)                |           | 250   | 350  |       | mV    |

|                    | Total Jitter (TJ)   | <a href="#">Note 18</a>                              |      |      | 10   | pSPK           |
|                    | Cycle-to-Cycle Jitter                                     | <a href="#">Note 19</a>                              |      |      | 1    | pSRMS          |
| $t_r/t_f$          | Rise/Fall Time  | 20% to 80% at full output swing                      | 40   | 80   | 150  | ps             |

### Notes:

13. Measured with 100mV input swing. See Timing Diagram section for definition of parameters. High-frequency AC-parameters are guaranteed by design and characterization.
14. Within-bank is the difference in propagation delays among the outputs within the same bank.
15. Bank-to-bank skew is the difference in propagation delays between outputs from difference banks. Bank-to-bank skew is also the phase offset between each bank after MR is applied.
16. Part-to-part skew is defined for two parts with identical power supply voltages at the same temperature and with no skew of the edges at the respective inputs.
17. RJ is measured with a K28.7 comma detect character pattern.
18. Total jitter definition: With an ideal clock input of frequency  $\leq f_{MAX}$ , no more than one output edge in 1012 output edges will deviate by more than the specified peak-to-peak jitter value.
19. Cycle-to-cycle jitter definition: The variation of periods between adjacent cycles,  $T_n - T_{n-1}$  where T is the time between rising edges of the output signal.

## Output Interface Applications

LVDS specifies a small swing of 350mV typical, on a nominal 1.25V common mode above ground. The common mode voltage has tight limits to permit large variations in ground between an LVDS driver and receiver. Also, change in common mode voltage, as a function of data input, is kept to a minimum to keep EMI low.

SIDE VIEW

NOTE:

1. ALL DIMENSIONS ARE IN MILLIMETERS.
  2. MAX. PACKAGE WARPAGE IS 0.05 mm.
  3. MAXIMUM ALLOWABLE BURRS IS 0.076 mm IN ALL DIRECTIONS.
  4. PIN #1 ID ON TOP WILL BE LASER/INK MARKED.
- △ DIMENSION APPLIES TO METALIZED TERMINAL AND IS MEASURED BETWEEN 0.20 AND 0.25 mm FROM TERMINAL TIP.
- △ APPLIED ONLY FOR TERMINALS.
- △ APPLIED FOR EXPOSED PAD AND TERMINALS.

32-Pin QFN
