

TECHNICAL DATA *Press-Fit Insulated Terminals*

Press-Fit Terminals have outstanding electrical, mechanical, thermal and chemical properties made possible through the use of uncontaminated ptfе resin - long known for its exceptional inherent physical properties - as well as close fabrication control. The highest production standards are assured because quality control at ITT Sealectro is based on United Kingdom Ministry specifications and methods and these inspection procedures are carried on from receipt of the ptfе right down to the assembled terminals.

Characteristics of ptfе

Electrical Properties

Volume Resistivity (50% RH, 23°C)	10 ¹⁸ ohm/cm
Dielectric Constant (60 Hz to 10 ⁶ Hz)	2.0-2.2
Dielectric Strength (volts/mil)	400-450
Dissipation (power) Factor (60 Hz to 10 ⁶ Hz)	0.0002
Corona Resistance (see ratings in tables)	No tracking or carbonizing
Capacitance (see ratings in tables)	Very low

Mechanical Properties

Tensile Strength	1500-2500 psi (105 kgf/cm ² - 175 kgf/cm ²)
Elongation	75-150%
Modulus of Elasticity	50000-55000 psi (3500 kgf/cm ² - 3850 kgf/cm ²)

Chemical Properties

Resistant to all acids and alkalis of all concentrations, as well as to all common solvents, fungus and rot.

Water absorption [24 hour immersion 1/8" (3.175) thickness]	0.01%
Burning Rate	None
Effect of Sunlight, Ultra-violet and Infra-red light	None
Temperature Range (not affected by soldering operations or cryogenic environs)	-100°C to +250°C (-148°F to +482°F)

Testing Data

Capacitance and voltage measured with terminals installed in chassis permitting 0.040" (1.016) protrusion of the ptfе bushing but not more than 0.050" (1.27) thick.

Note: While the above values are typical of the materials used, they should not be quoted on users specifications or drawings of ITT Sealectro Insulated Terminals

Plating

Standard plating code for the lug portion of each terminal is given in the 13th & 14th digits of the part number.

20	Gold flash 0.000005" (0.13 micron) min. over silver 0.0003" (7.62 micron) min.
51	Greville Tinned to ITT Sealectro specification A0143502
59	Bright acid tin 0.0003" (7.62 micron) min. over 0.0002" (5.08 micron) min. copper
60	Silver 0.0002" (5.08 micron) over copper flash.

Bushing Colour

All terminals are manufactured with white ptfе

Dimensions

All dimensions are in inches with metric equivalents given in brackets or green throughout.

INSTALLATION PROCEDURE

Press-Fit Insulated Terminals

The Press-Fit method is the simplest, fastest, most economical terminal installation, with practically no restriction as to chassis material and thickness. The procedure is further simplified by the use of Insertion Tools available from ITT Sealectro. These inexpensive tools are designed to fit any drill press or hand-arbor press.

Recommended Insertion Tools for each terminal are listed in the first column following the terminal part number on each table in the catalogue.

(1) PUNCH OR DRILL HOLE in chassis $0.013" + 0.002$ (0.05) less than diameter of terminal section (dia G in tables) passing through chassis. Minimum protrusion of bushing passing through chassis $0.040"$ (1.0). Maximum thickness of chassis $0.125"$ (3.18); for greater thickness ask for our recommendations. Countersink from breakout or die side of chassis (not from punch side)

(2) COUNTERSINK ENTRANCE EDGEUse 60° countersink when chassis thickness is $0.040"$ (1.0) and over; use 82° countersink when chassis thickness is less than $0.040"$ (1.0). This enables centring of terminal in hole and prevents scoring the ptfе bushing. Depth and maximum diameter of countersink is determined by thickness of chassis stock and bushing's major diameter.

(3) INSERTION TOOL.... Insertion tool is placed in chuck of drill press (power off) or hand arbor press. Terminal is held by tool, leaving assembler's hands free to index and centre chassis hole underneath tool. Proper pressure is applied and released just as soon as major diameter of terminal seats itself.

Bushing Minor Dia. (Dia "G" in tables)		Hole or punch Dia. "A" $\pm 0.002"$ (± 0.05)		Countersink Dia. "B" $+0.010" - 0.000"$ ($+0.25 - 0.00$)	
.075	1.90	.070	1.78	.083 ^{+0.005} _{-0.000}	2.11 ^{+0.13} _{-0.00}
.093	2.36	.086	2.18	.110	2.79
.104	2.64	.091	2.31	.115	2.92
.125	3.18	.113	3.87	.135	3.43
.148	3.76	.136	3.45	.160	4.06
.165	4.19	.152	3.86	.175	4.45
.171-.172	4.34-4.37	.158	4.01	.175	4.45
.185	4.70	.172	4.37	.195	4.95
.217-.218	5.51-5.54	.205	5.21	.235	5.97
.256	6.50	.243	6.17	.269	6.83
.290	7.37	.277	7.04	.305	7.75
.373	9.48	.360	9.15	.380	9.65
.513	13.03	.500	12.70	.537	13.64

Use 60° countersink for chassis thickness $.040"$ (1.0) and over

Use 82° countersink for chassis thickness under $.040"$ (1.0)

Punched & Drawn hole

NOTES

- Ptfe should protrude $.040"$ (1.0) min below chassis
- Clearance between punch & die should be held to normal shop tolerances governed by material & thickness & type
- Pre-drawn hole size is governed by material type & thickness
- Die diameter is punch diameter plus double the metal thickness, tolerances being consistent with normal shop practice.
