Product Description

Eaton's new line of **XT** Relays and Timers includes mini and standard frame control relays and auxiliary contacts, mini electronic on-delay and multi-function timers and an electronic star-delta (wye-delta) timer for use in star-delta (wye-delta) combinations. Because **XT** meets UL, CSA, CCC and CE standards, it is the perfect product solution for IEC applications all over the world. The compact, space saving, and easy to install **XT** line of IEC contactors and starters is the efficient and effective solution for customer applications.

Features

- For use with Mini and Standard frame size contactors and starters
- Control Relays
 - AC Control from 12V to 550V 50 Hz, 600V 60 Hz
 - DC Control from 12V to 220V
- On-Delay and Multi-Function Timers
 - 24 – 240V AC/DC Control
- Available with screw or spring cage terminals
- 4-Pole Configurations
- IP20 finger and back-of-hand proof
- Large ambient temperature range: -25° to 50°C [-13° to 122°F]
- The XTRE Control Relays have positively driven contacts between the relay and the auxiliary contact modules as well as within the auxiliary contact modules

Standards and Certifications

- IEC EN 60947
- CE Approved
- UL
- CSA
- CCC
- ATEX

① Orders must be placed in multiples of package quantity listed.

② 1 early-make contact (NO_E), 1 late-break contact (NC_L).

③ Interlocked opposing contacts, to IEC/EN 60947-5-1 Annex L (positively driven), within the auxiliary contact modules (not NO_E and NC_L contacts) and between the auxiliary contacts and built-in contacts of the XTRE control relays.

Suppressors

For AC operated contactors 50 – 60 Hz. On DC operated contactor relays and on XTRE10B the suppressor circuit is built-in. Note drop-out relay.

Varistor Suppressor ④⑤

Table 34-8. Varistor Suppressor for XTRE

XTMC Mini Contactor

Product Description

Eaton's new line of Cutler-Hammer® **XT** Miniature Controls includes non-reversing and reversing mini contactors, mini overload relays and snap-on accessories. A wide range of applications is possible including small electrical motors from fractional to 5 hp (460V AC) or up to 4 kW (400V AC).

Application Description

Due to its compact size, the **XT** line of mini controls is best suited to be applied in light duty loads such as hoisting, packaging, material handling, heating, lighting and automation systems. **XT** mini contactors are a particularly compact, economic and environmentally friendly solution wherever control of small motors or loads is required.

Features

Mini Contactors — Types XTMC and XTMF, 6 – 9A

- AC Control from 12V to 550V 50 Hz, 600V 60 Hz
- DC Control from 12V to 220V
- Available with screw or spring cage terminals
- Reversing or Non-reversing
- 3 and 4-Pole Configurations
 - 3-Pole XTMC
 - 4-Pole XTMF
- Panel or DIN rail mounting
- IP20 finger and back-of-hand proof
- Low noise operation
- High degree of climatic proofing
- Large ambient temperature range -25° to 50°C [-13° to 122°F]

Mini Overload Relays — Bimetallic Type XTOM

- Phase failure sensitivity
- Direct mount to XTMC and XTMF Mini Contactors
- Trip Class 10
- 11 settings to cover 0.1 to 12A
- Ambient temperature compensated -5° to 50°C [23° to 122°F]
- Manual and automatic reset by selector switch
- 1 Make (NO) or 1 Break (NC) auxiliary contact as standard
- Test/Off Button
- Trip-free release

Standards and Certifications

- IEC EN 60947
- CE Approved
- UL
- CSA
- ATEX
- CCC

② Underscore (_) indicates magnet coil suffix required. See Table 34-29.

Table 34-28. Mini Overload Relay Settings (A)

Setting	Starting
A: $I_N \times 0.58$	≤ 15 sec
Motor Protection in the Y and Delta Configurations.	
B: $I_N \times 1$	15 – 40 sec
Only partial motor protection in star position	
C: $I_N \times 0.58$	> 40 sec
Motor not protected in star position.	
Timing Relay set to approximately 10 sec.	

Figure 34-21. Star-Delta (Wye-Delta) Power Wiring Diagram

Note: Depending on the coordination type required (i.e. Type 1 or Type 2) it must be established whether the fuse protection and the input wiring for the main and delta contactors are to be common or separate.

① Short-circuit protection:

Observe the maximum permissible fuse of the contactor with direct device mounting. See **MN03402002E** for more information.

② When fitted directly to the contactor, a clearance of at least 5 mm is required between the overload relays.

Tripping Characteristics Chart

These tripping characteristics are mean values of the spread at 20°C ambient temperature in a cold state. Tripping time depends on response current. With devices at operating temperature, the tripping time of the overload relay reduces to approx. 25% of the read off value. Specific characteristics for each individual setting range can be found on **Page 34-28**.

Figure 34-22. Tripping Characteristics

Accessories

Auxiliary Contacts

Front mounted snap-on auxiliary contacts for mini contactors are available with screw or spring cage terminals in a variety of contact configurations. Auxiliary contact modules are standard with interlocked opposing contacts, except in the case of early-make or late-break contacts.

③ For AC operated contactors, 50/60 Hz. DC operated contactors have integrated varistor suppressors.
④ Orders must be placed in multiples of package quantity listed.

Mechanical Interlock

Table 34-34. Mechanical Interlock

Description	Package Qty.	Catalog Number	Price U.S. \$ ⑤
Mechanical Interlock	5	XTMCXML	

⑤ Orders must be placed in multiples of package quantity listed.

Note:

■ For two contactors with AC or DC operated magnet system that are horizontally or vertically mounted, the distance between contactors is 0 mm, and the mechanical lifespan is 2.5 x 10⁶ operations.

Reversing Link Kit

Table 34-35. Reversing Link Kit

Description	Package Qty.	Catalog Number	Price U.S. \$
Main current wiring for reversing contactors and starters.	1	XTMCXRL	

Notes:

■ The following control cables are integrated as part of the electrical interlock:
K1M: A1 — K2M: 21; K1M: 21 — K2M: A1

■ Reversing Link Kit does not include mechanical interlock. See Table 34-34 for Mechanical Interlock.

Star-Delta (Wye-Delta) Link Kit

Table 34-36. Star-Delta (Wye-Delta) Link Kit

Description	Package Qty.	Catalog Number	Price U.S. \$
Main current wiring for star-delta (wye-delta) combinations. Includes the Star-Delta Bridge.	1	XTMCXSDL	

Notes:

■ The following control cables are integrated in addition to the electrical interlock:

K3M: A1 — K5M: 21; K3M: 21 — K5M: A1; K3M: A2 — K5M: A2

■ When combined with overload relay use separate mounting.

Star-Delta (Wye-Delta) Bridge

XT Family of Contactors

Contactors and Starters

Product Description

Eaton's new line of **XT** Contactors and Starters includes non-reversing and reversing contactors, overload relays and a variety of related accessories. Because **XT** meets IEC, UL, CSA, CCC and CE standards, it is the perfect product solution for IEC applications all over the world. The compact, space saving, and easy to install **XT** line of IEC contactors and starters is the efficient and effective solution for customer applications from 7A to 2000A.

Features and Benefits

- AC control from 12V to 600V 50/60 Hz
- DC control from 12V to 220V
- Available with screw or spring cage terminals
- Reversing or non-reversing contactors and starters
- AC-3 contactor ratings to 1000A and AC-1 contactor ratings to 2000A
- Non-reversing starters to 650A
- Panel or DIN rail mounting to 65A
- IP20 finger and back-of-hand proof
- Large ambient temperature range, -25 to 50°C [-13 to 122°F]
- AC and DC controlled contactors in the same compact frame
- Low power consumption DC coils
- Built-in NO or NC auxiliary contacts to 32A
- Plug-in accessories for reduced installation time
- Coil replacement on Frames C – N (18 – 820A)
- Contact replacement on Frames D – N (40 – 820A)
- Integrated suppressor 7 – 150A DC operated contactors and 185 – 2000A AC and DC operated contactors

Standards and Certifications

- IEC EN 60947
- CE Approved
- UL
- CSA
- CCC
- ATEX
- RoHS

Note: For Type 2 Coordination, see Page 34-210.

- ① Underscore (_) indicates magnet coil suffix required. See Table 34-58, Page 34-38.
- ② For Spring Cage Terminals, insert **C** after the fourth digit of the Catalog Number. Example: XTCEC007B10A. For 7 – 12A XTCEC Contactors, the power, auxiliary and coil terminals are spring cage. For 18 – 32A XTCEC Contactors, the auxiliary and coil terminals are spring cage. For 40 – 150A XTCEC Contactors, the coil terminals only are spring cage.
- ③ For electrical life contactor application data, see Table 34-51, Page 34-35.
- ④ For 180 – 225A, use 2 x 3/0 AWG wire.
- ⑤ For 225 – 275A, use 2 x 70 mm² wire.

Notes:

The 7 – 32A XTCE Contactors have positively driven contacts between the integrated auxiliary contact and the auxiliary contact module as well as within the auxiliary contact modules.

The 40 – 65A XTCE Contactors have positively driven contacts within the auxiliary contact module. 6 auxiliary contacts are possible with a combination of side mounted and front mount auxiliary contacts.

DC operated contactors (Frames B – G, 7 – 150A) have a built-in suppressor circuit.

Frame B – C contactors with 1NC built-in auxiliary are mirror contacts (XTCE...B01_ – XTCE...C01_).

① Underscore (_) indicates magnet coil suffix required. See Table 34-58, Page 34-38. Terminals not included. See Page 34-59 for terminal accessories.
 ② For 185 – 500A Contactors at 660/690V or 1000V: Do not reverse directly.
 ③ When operating the 580 – 2000A XTCE contactors with frequency inverters, the suppressor on the load side must be removed. The load side suppressor must also be removed when performing a high-voltage test — see Pub51204, Pub51209.

Table 34-51. Contactor Application Data ^④

Catalog Prefix	Electrical Life (Operations) for 10hp, 480V (14.2A) Applications
XTCE012B	1 million
XTCE015B	1.2 million
XTCE018C	2 million

④ See Page 34-88 for Electrical Life Curves.

Note:

AC and DC operated contactors have a built-in suppressor circuit (Frames L – R, 185 – 2000A).

Description	XTCS185L – XTCS500M	XTCEC16R, XTCEC20R	XTCE185L – XTCEC14P
Conventional A1/A2 are applied to voltage in the usual manner.			
Direct from the PLC A 24V output from the PLC can be connected directly to connections A3/A4.	—		
From Low-Consumption Command Devices Command devices which can only be subject to minimal loads such as circuit board relays, control circuit devices or position switches can be connected directly to A10/A11.	—		

② Standstill in an emergency (Emergency-Stop).

③ Command device connection,

AC-3	K1M	K3M	K5M
12 – 55			
90 – 260		—	—
315 – 1700			

Notes:

Main Circuit: Depending on the coordination type required (i.e. Type 1 or Type 2) it must be established whether the fuse protection and the input wiring for the main and delta contactors are to be common or separate.

Control Circuit: If the combinations are used in the scope of the IEC/EN 60 204-1, VDE 0113 part 1, point 9.1.1 regarding the supply of control circuits is to be observed.

- ① With series resistors, without quick-discharge resistor.
- ② Underscore (_) indicates magnet coil suffix required, see Table 34-74.
- ③ Contact Eaton for availability.

Notes:

■ Weld-resistant for capacitors with inrush current peaks up to $180 \times I_N$.

■ For switching of power factor connection with reactors please observe engineering notes, Table 34-75. Use of the contactors XTCE without series resistor for centralized power factor correction — when using contactors for group compensation, a minimum inductance of approximately $6 \mu\text{H}$ per capacitor must be available to limit the high inrush current peaks. This corresponds to an air-cored coil with 5 windings and a coil diameter of approximately 140 mm diameter. The conductor cross-section must be selected according to the rated current per phase.

Figure 34-36. Wiring Diagram

■ In the case of group compensation multi-stage capacitor banks are connected to the mains, as required. In the process, transient currents of up to $180 \times I_e$ can flow between the capacitors. The capacitors are pre-charged via the early-make auxiliary contacts and the fitted wire resistors, thereby reducing the inrush current. The main contacts then close after a time lag and carry the uninterrupted current. The contactors for capacitors are weld-resistant with inrush current peaks up to $180 \times I_e$ due to their special contacts. For switching reactive-power compensation equipment with chokes, observe design notes.

Auxiliary Contacts

Front mounted snap-on auxiliary contacts for **XT** contactors are available with screw or spring cage terminals in a variety of contact configurations.

Notes:

The 7 – 32A XTCE Contactors have positively driven contacts between the integrated auxiliary contact and the auxiliary contact module as well as within the auxiliary contact modules.

The 40 – 65A XTCE Contactors have positively driven contacts within the auxiliary

contact module. 6 auxiliary contacts are possible with a combination of side mounted and front mount auxiliary contacts.

Frame B – C contactors with 1NC built-in auxiliary are mirror contacts (XTCE...B01_ – XTCE...C01_).

① Orders must be placed in multiples of package quantity listed.
 ② 1 early-make contact (1NO_E), 1 late-break contact (1NC_L).
 ③ Front (Top) Mount Tall Version is for use with Frame B Electrical Wire Bridges and Link Kits (see Page 34-57) and Toolless Plug Combination Connection Kits: XTCEXRLB, XTCEXSDLB, XTPAXTPCB, XTPAXTPCRB, XTPAX.

④ Can be mounted to the left side of contactor only. Cannot be used in combination with front (top) mount auxiliary contacts or mechanical interlocks.
Notes:
 ■ Interlocked opposing contacts, to IEC/EN 60947-5-1 Annex L (positively driven), within the auxiliary contact modules (not NO (early make) and NC (late break) contacts) and for the built-in auxiliary contacts of the XTCE007B... – XTCE032C....

■ Auxiliary break contact can be used as mirror contact to IEC/EN 60947-4-1 Annex F (not NC (late break) contact).
 ■ No auxiliary contacts can be fitted between two contactors.

Notes:

- Forced operation contact to IEC/EN 60947-5-1 Appendix L (positively driven), inside the auxiliary contact unit (not early close and late opening).
- Auxiliary normally closed contact can be used as mirror contact to IEC/EN 60947-4-1 Appendix F (not late opening).
- No auxiliary contacts can be fitted between two contactors.

Figure 34-37. Auxiliary Contact Combinations

Suppressors

The switching of contactor coils can generate voltage transients that may cause arching on switch contacts and/or damage electronics on the control line. Either a RC or Varistor Suppressor is recommended in these types of applications. All **XT** DC contactor coils have built-in suppression.

Varistor Suppressors clamp the voltage transient above the maximum coil voltage and are recommended when the level of the transient is known to not exceed the coil voltage. RC Suppressors slow and reduce the level of the voltage transient but do not clamp them at a specific level. The slowing of the transient can reduce electrical interference. These are recommended in applications where operating rates are high.

RC Suppressor ①②

Table 34-80. RC Suppressor

Voltage	For Use with...	Pkg. Qty.	Catalog Number	Price U.S. \$ ③
24 – 48 48 – 130 110 – 240 240 – 500	XTCE007B – XTCE015B, XTCF020B	10 10 10 10	XTCEXRSBW XTCEXRSBA XTCEXRSBB XTCEXRSBC

Sealable Shroud

	—	Transparent sealable shroud used to protect electronic timer modules from unwanted access.	XTCEXTEE, XTCEXTED, XTCEXTEY	1	XTCEXTESHDRD	
--	---	--	------------------------------------	---	--------------	--

① Front (Top) mounted timer modules for use with XTCE...B and XTCE...C contactors. Cannot be combined with top mount auxiliary contacts, XTCEXF...C__.

Mechanical Interlock ^①

Table 34-86. Mechanical Interlock

	For Use with...	Pkg. Qty.	Catalog Number	Price U.S. \$ ^②
	XTCE007B – XTCE015B, XTCE020B	5	XTCEXMLB	
	XTCE018C – XTCE032C XTCF032C – XTCE045C	1	XTCEXMLC	
	XTCE040D – XTCE072D XTCF063D – XTCE080D	1	XTCEXMLD	
	XTCE080F – XTCE170G XTCF125G – XTCE200G	1	XTCEXMLG ^③	
	XTCE185L – XTCE570M	1	XTCEXMLM	
	XTCE580N – XTCEC10N	1	XTCEXMLN ^③	
	XTCE500M – XTCE570M with XTCE580N – XTCEC10N	1	XTCEXMLNM ^③	

^① For two contactors with AC or DC operated magnet system which are horizontally or vertically mounted. For B – G frames, mechanical lifespan is 2.5×10^6 operations and the distance between contactors is 0 mm. For L – N frames, mechanical lifespan is 5×10^6 operations and no auxiliary contact can be mounted between the mechanical interlock and the contactor — the distance between contactors is 15 mm.

^② Orders must be placed in multiples of package quantity listed.

^③ XTCEXMLG, XTCEXMLN and XTCEXMLNM consist of an interlock element and mounting plate.

Reversing Link Kits

Main current wiring for reversing combinations. Includes Paralleling Bridge and Reversing Bridge. Does not include Mechanical Interlock, see Table 34-86.

Table 34-87. Reversing Link Kits

	For Use with...	Pkg. Qty.	Catalog Number	Price U.S. \$
	XTCE007B – XTCE015B	1	XTCEXRLB ^④	
	XTCE018C – XTCE032C	1	XTCEXRLC	
	XTCE040D – XTCE065D	1	XTCEXRDL	
	XTCE080F – XTCE150G	1	XTCEXRDLG	
	XTCE185L – XTCE250L	1	XTCEXRLL	
	XTCE300M – XTCE400M	1	XTCEXRML400	

^④ Also includes Interlocking Bridge (XTCEXLB). The following control cables are integrated for electrical interlock: K1M: A1 – K2M: 21; K1M: 21 – K2M: A1; K1M: A2 – K2M: A2.

Star-Delta (Wye-Delta) Link Kits

Main current wiring for star-delta (wye-delta) combinations. Includes Paralleling Bridge, Reversing Bridge, and Star-Delta Bridge. Does not include Mechanical Interlock, see Table 34-86.

Table 34-88. Star-Delta (Wye-Delta) Link Kits

	For Use with...	Pkg. Qty.	Catalog Number	Price U.S. \$
	XTCE007B – XTCE015B	1	XTCEXSDLB ^⑤

	XTCE185L – XTCE225L	1	XTCEXSDLL225	
	XTCE250L	1	XTCEXSDLL250	
	XTCE300M – XTCE400M	1	XTCEXSDLM400	

^⑤ Also includes Interlocking Bridge (XTCEXLB). The following control cables are integrated for electrical interlock: K1M: A1 – K2M: 21; K1M: 21 – K2M: A1; K1M: A2 – K2M: A2.

Paralleling Bridge

Component part of Reversing Link Kit (XTCEXRL_). Parallels the phases on the line-side of two contactors.

Table 34-89. Paralleling Bridge

	For Use with...	Pkg. Qty.	Catalog Number	Price U.S. \$ ^⑥
	XTCE007B – XTCE015B	20	XTCEXPBB	
	XTCE018C – XTCE032C	20	XTCEXPBC	
	XTCE040D – XTCE065D	10	XTCEXPBD	
	XTCE080F – XTCE150G	10	XTCEXPBG	

^⑥ Orders must be placed in multiples of package quantity listed.

Contactors and Starters

Reversing Bridge

Component part of Reversing Link Kit (XTCEXRL_). Reverses the phases on the load-side of two contactors.

Table 34-90. Reversing Bridge

	For Use with...	Pkg. Qty.	Catalog Number	Price U.S. \$ ①
	XTCE007B – XTCE015B	20	XTCEXRBB	
	XTCE018C – XTCE032C	20	XTCEXRBC	
	XTCE040D – XTCE065D	10	XTCEXRBD	
	XTCE080F – XTCE150G	10	XTCEXRBG	

① Orders must be placed in multiples of package quantity listed.

Electrical Interlocking Bridge

Connects NC auxiliary contact with A2 terminal of other contactor in reversing application. Included in XTCEXRLB reversing link kit.

Table 34-91. Electrical Interlocking Bridge

For Use with...	Pkg. Qty.	Catalog Number	Price U.S. \$ ②
XTCE007B – XTCE015B	20	XTCEXLBB	

② Orders must be placed in multiples of package quantity listed.

Star-Delta (Wye-Delta) Bridge

Component part of Star-Delta Link Kit (XTCEXSDL_). Commons the 3-phases on the line side of shorting contactor.

Table 34-92. Star-Delta (Wye-Delta) Bridge

	For Use with...	Pkg. Qty.	Catalog Number	Price U.S. \$ ③
	XTCE007B – XTCE015B	20	XTCEXSDBB ④	
	XTCE018C – XTCE032C	20	XTCEXSDBC	
	XTCE040D – XTCE072D	10	XTCEXSDBD	
	XTCE080F – XTCE170G	1	XTCEXSDBG	
	XTCE185L – XTCE400M	1	XTCEXSDB400	
	XTCE500M	1	XTCEXSDB500	

③ Orders must be placed in multiples of package quantity listed.

④ Frame B is tool-less connection type.

Connector ⑤

Table 34-93. Connector

	For Use with...	Pkg. Qty.	Catalog Number	Price U.S. \$ ⑥
	XTCE007B – XTCE032C	50	XTCEXCNC	
	XTCE040D – XTCE150G	10	XTCEXCNG	

⑤ For mechanically arranging contactors in combinations. Distance between contactors is 0 mm.

⑥ Orders must be placed in multiples of package quantity listed.

Add-On Fourth Pole

Add-On Fourth Pole for use with Frame D contactors. Only for AC-1 load. Up to two auxiliary contacts can be fitted.

Table 34-94. Fourth Pole

	For Use with...	AC-1 (A) Open/Enclosed	Pkg. Qty.	Catalog Number	Price U.S. \$
	XTCE040D00_	35/30A	1	XTCEX4P35D	
	XTCE050D00_	75/60A	1	XTCEX4P75D	
	XTCE065D00_ XTCE072D00_				

Parallel Link ①②③

For using one contactor per phase. Each package comes with (2) links for line: load.

Table 34-95. Parallel Link

	For Use with...	Pkg. Qty.	Catalog Number	Price U.S. \$ ④
	XTCE007B – XTCE015B	5	XTCEXPLKB	
	XTCE018C – XTCE032C	5	XTCEXPLKC	
	XTCE040D – XTCE072D	1	XTCEXPLKD	
	XTCE080F – XTCE170G	1	XTCEXPLKG	
	XTCE185L	1	XTCEXPLKL185	

- ① Fourth Pole can be broken off: 4-Pole: I_{th} = 60A; 3-Pole: I_{th} = 50A.
- ② AC-1 current carrying capacity of the contactor increases by a factor of 2.5. For XTCEXPLKL185, one shroud is included for protection against accidental contact.
- ③ Protected against accidental contact in accordance with IEC 536.
- ④ Orders must be placed in multiples of package quantity listed.

3-Phase Commoning Link

Main current wiring that parallels and commons the line side of multiple contactors. For use with Frame B contactors only. Protected against accidental contact, short-circuit proof. Max voltage (U_e) = 690V, Max Current (I_e) = 63A.

Table 34-96. 3-Phase Commoning Link

	Notes	Pkg. Qty.	Catalog Number	Price U.S. \$ ⑤
	Suitable for 3 contactors, length = 135 mm	5	XTCEXCLK3B	
	Suitable for 4 contactors, length = 180 mm	5	XTCEXCLK4B	
	Suitable for 5 contactors, length = 225 mm	5	XTCEXCLK5B	

- ⑤ Orders must be placed in multiples of package quantity listed.

Incoming Terminal

Terminal for use with three-phase commoning link XTCEXCLK_B.

Table 34-97. Incoming Terminal

	For Use with...	Pkg. Qty.	Catalog Number	Price U.S. \$ ⑥
	XTCE007B – XTCE015B	5	XTCEXITB	

- ⑥ Orders must be placed in multiples of package quantity listed.

Terminal Lug Assembly

For connection of: round conductor, flexible and stranded, flat strip conductor. With control circuit terminal. See **Table 34-119, Page 34-79** for terminal capacities.

Table 34-98. Terminal Lug Assembly

	For Use with...	Pkg. Qty.	Catalog Number	Price U.S. \$

^① When using contactors for group compensation, a minimum inductance of approx. 6 uH per capacitor must be available to limit the high inrush current peaks. This corresponds to an air-cored coil with 5 windings and a coil diameter of approximately 140 mm. The conductor cross-section must be selected according to the rated current per phase.

① When using contactors for group compensation, a minimum inductance of approx. 6 uH per capacitor must be available to limit the high inrush current peaks. This corresponds to an air-cored coil with 5 windings and a coil diameter of approximately 140 mm. The conductor cross-section must be selected according to the rated current per phase.

Electromagnetic Compatibility (EMC)

Emitted interference	To EN-60947-1
Noise Immunity	To EN-60947-1

① 0.7 – 1.3 without additional auxiliary contact modules and ambient temperature +40°C [104°F].

② Coil Suffix TD: U_{min} 24V DC/U_{max} 27V DC.
 Coil Suffix WD: U_{min} 48V DC/U_{max} 60V DC.
 Coil Suffix AD: U_{min} 110V DC/U_{max} 130V DC.
 Coil Suffix BD: U_{min} 200V DC/U_{max} 240V DC.

Example:

U_C = 0.7 x U_{min} — 1.2 x U_{max}
 U_C = 0.7 x 24V — 1.2 x 27V DC

① At maximum permissible ambient temperature.

② Example —

The transformer has a nominal current of 10A with an inrush current of 18 times the nominal current. So, the contactor must have an AC-3 current of $18/6 \times 10A = 30A$. Using an XTCE032C (32A AC-3) contactor is recommended.

^① At maximum permissible ambient temperature.

^② Example —

The transformer has a nominal current of 10A with an inrush current of 18 times the nominal current. So, the contactor must have an AC-3 current of 18/6 x 10A = 30A. Using an XTCE032C (32A AC-3) contactor is recommended.

① For separate mounting, short circuit Type 1 rating is 500A and short circuit Type 2 rating is 400A.

Notes:

Short circuit protection: Observe the maximum permissible fuse of the contactor with direct device mounting. See MN03402001E for more information on overload relays for Frame B – G.

Trip Class: 10A

Suitable for protection of EEx e-motors. EC prototype test certificate available upon request.

Observe manuals MN03402001E and MN03407001E, see **Table 34-134**.

Tripping Characteristics

These tripping characteristics are the mean values of the spread at 20°C ambient temperature in a cold state.

Tripping time depends on response current. With devices at operating temperature, the tripping time of the overload relay reduces to approximately 25% of the read off value. Specific characteristics for each individual setting range can be found in MN03402001E.

Product Description

The C396 is a self-powered, robust electronic overload designed for integrated use with Freedom NEMA, **XT** IEC, and DP contactors. The overload can be ordered as a stand-alone version that is designed for Panel-Mounting and for use on 35 mm DIN rail. The C396 has an FLA range of 0.1 – 150 Amps with internal CTs, and up to 1500 Amps using external CTs.

Standards and Certifications

- UL Listed Components: Stand-alone, starter-mounted devices and remote reset kit.
- CSA Certified Components: Stand-alone, starter-mounted devices and remote reset kit.
- IEC EN 60947-4-1, EN 60947-5-1
- CE
- RoHS

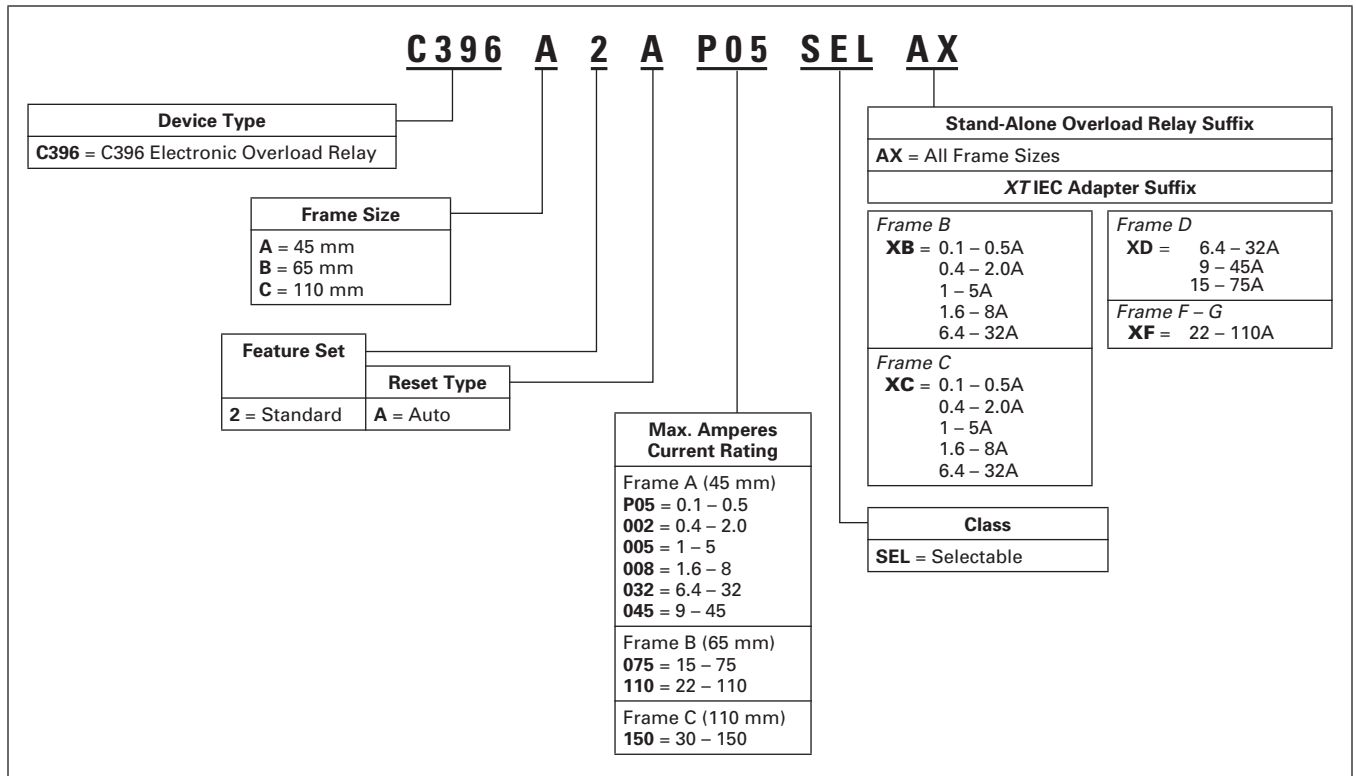

C396 Electronic Overload Relay

Features

- Standard Version: Selectable trip class (5, 10, 20, 30) with Selectable Manual or Auto Reset
- Broad 5:1 FLA range
- Self-Powered Design, will accept AC voltages from 12 – 690V 50/60 Hz
- Ambient Temperature Compensation
- Low Heat Generation
- Phase Loss Protection
- Phase Unbalance Protection
- Electrically isolated 1NO-1NC Contacts (Push-to-Test)
- Trip Status Indicator
- FLA range of 0.1 – 1500 Amps

① Discount Symbol **1CD7**.

② Discount Symbol **1CD1**.

③ Set of 3 lugs and hardware, 2 sets are required to wire line and load sides. Bus Bar Kit (C396CBAR or C396CBARXT) is needed to use the Lug Kit.

④ Bus bar kits do not include lugs. Order C396CLUG if lugs are needed (3 lugs per kit).

⑤ The operator button is blue with the letters "RESET" printed in white. The push rod is 4.72" long and can be cut to the desired length. This kit can be used alone or in conjunction with the C396 Reset Bar Kit, C396ARST, to increase the size of the reset area on the overload.

⑥ Reset Bar Kit (C396ARST) required to use the Remote Reset modules. Note that all Freedom Starters come with Reset Bars.

⑦ Must be cut to proper length — uncut 4.72 inches (119.9 mm) long.

⑧ Enables a 22.5 mm operator to be mounted in a 30.5 mm holes — 1/16 to 7/32 inch (1.6 to 5.6 mm) panel thickness.

Product Description

Eaton’s new **XT** family of Manual Motor Protectors (MMPs) features a pushbutton or rotary ON/OFF manual disconnect, Class 10 adjustable bimetallic overload relay and fixed magnetic short circuit trip capability in one compact unit. Two frame sizes are available: Frame B (45 mm) for motors with FLA ratings up to 32A and Frame D (55 mm) covers motor FLA ratings up to 63A.

Application Description

The XTPB and XTPR MMPs can be used in the following applications.

Motor Protective Circuit Breaker

In many countries outside of the United States and Canada, especially Europe, the MMPs are tested and classified as thermal magnetic circuit breakers for use in motor branch circuits. This can be an important consideration for all companies who export their equipment and machines internationally. Both the XTPB and XTPR conform to IEC/EN 60947 and have the CE Mark.

Manual Motor Protectors

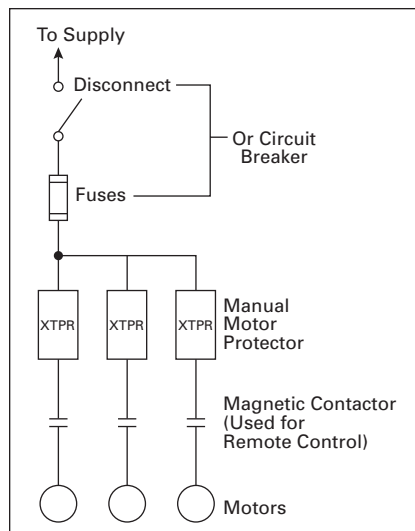

The XTPB and XTPR MMPs are UL Listed under UL 508 as Manual Motor Protectors. They provide an economical solution for applications requiring simple manual starting and stopping of motors. When used as an MMP, they are typically installed in an enclosure. Many enclosures are offered as accessories for the MMPs. Separate short-circuit protective devices, such as circuit breakers or fuses, are wired ahead of the MMPs. The short-circuit protective device should be sized per the NEC code and should not exceed 400% of the maximum FLA dial setting of the MMP.

Group Motor Installations

A Group Motor Installation can be defined as more than one motor circuit protected by a single set of fuses or circuit breaker on a motor branch circuit. This eliminates the need for individual fuses or circuit breakers for each motor circuit. Substantial component cost savings, panel space savings and reduced wiring installation time can be achieved in Group Motor Installations.

The MMPs are tested and listed for group installation. If remote operation is required, a magnetic contactor can be wired in series with the MMP. See **Figure 34-101**.

Article 430.53 of the National Electric Code contains the rules and requirements for Group Motor Installations. Refer to Application Note AP03402001E for NEC requirement for group motor installation.

**Figure 34-101. Group Motor Installation
NEC 430-53**

See Application Note — AP03402001E.

**Protection in Different
Controller Types**

A *UL 508 Type E Self-protected Manual Combination Starter/Motor Controller* consists of a single device having integral short circuit protection, a main set of contacts, motor overload protection, and may also include a UL listed Line Side Adapter (see **Figure 34-102**). This type of controller is a legitimate short circuit protective device and disconnect means for the downstream motor. It does require an upstream feeder short circuit protective device, but does not require a dedicated branch circuit protection or a disconnect means. A UL 508 Type E rating means that the unit clears a fault and does not experience any welding of the power poles. A UL 508 Type E self-protected manual combination starter will remain fully functional should a short circuit within its ratings occur.

A *UL 508 Type F Self-protected Combination Motor Controller* consists of a UL 508 Listed Type E Self-protected Manual Combination Starter/Motor Controller, a UL Listed Contactor, and possibly a UL Listed Line Side Adapter. While the Type E self-protected manual motor controller of this combination motor controller device is a legitimate short circuit protective device and disconnect means for the downstream motor, the contactor is *not* “self-protected.” *E.g.* XTCE007 – XTCE065.

In addition, as a complete assembly or modular components, the device should have Type 2 Coordination certification. Type 2 Coordination means the Starter or the Controller must exhibit little or no damage following a major short circuit fault and should be able to be returned to proper service without replacing any parts.

**Component in a Combination
Motor Controller**

The XTPB and XTPR MMPs can also be wired in series with a magnetic contactor to complete the assembly of a remotely operated, combination motor controller.

Features

- ON/OFF Rotary Handle with Lockout Provision
- Visible Trip Indication
- Class 10 Overload Protection
- Phase Loss Sensitivity
- Ambient Temperature Compensation to IEC/EN 60947, VDE 0660
- Fixed Short Circuit Trip — 14 times maximum setting of overload FLA dial
- Type 2 Coordination per IEC 947
- Identification Markers Standard on Starter Faceplate
- Motor Applications from 0.1A to 63A
- Built-in heater and magnetic trip elements to protect the motor
- Adjustment dial for setting motor FLA
- DIN Rail Mount
- Terminal Types Available:
 - Screw terminals
 - Screw (line) and Spring Cage (load) terminals
 - Spring Cage terminals
- Accessories include:
 - Front and Side Auxiliary Contacts
 - Trip Indicating Contacts
 - Tamperproof Cover for OLR Dial
 - Undervoltage Release
 - Shunt Trip
 - Thru-the-Door Operators
 - Enclosures
 - 3-Phase Line Side Connecting Links

Figure 34-102. Line Side Adapters — When to Use Them

Note: Line Side Adapters are not required for non-US applications. Most countries outside of the US classify the MMP as a thermal magnetic circuit breaker.

Standards and Certifications

- UL Listed File No. E245398
- UL 508 Group Motor and Type E Compliant
- IEC/EN 60947
- CSA File 229767, Class 3211-05
- DIN VDE 0660 Part 100, Part 101 and Part 102
- CCC

Note: For Type 2 Coordination of MMCs, see **Tables 34-249** through **34-260** on **Pages 34-210** through **34-215**.

Types (Configurations)

- Motor Protective Device with Thermal and Magnetic Trip
 - XTPB Pushbutton Actuated Manual Motor Protector up to 25A
 - XTPR Rotary Actuated Manual Motor Protector up to 63A
- For the Protection of Transformers with a high inrush current:
 - XTPT Manual Transformer Protector up to 25A — not UL Approved
- Motor Protective Device without Overload Function:
 - XTPM Motor Protective Circuit Breaker up to 32A — not UL Approved

Catalog Number Selection

Table 34-144. XT— Catalog Numbering System

Product Selection

Product Selection for Manual Motor Starter Applications

When ordering, specify Catalog Numbers according to the following stipulations:

XT Manual Motor Protectors are selected based on the overload current range required for a given motor. This current range is determined from the motor Full Load Ampere rating and Motor Service Factor usually found on the motor nameplate.

For motors with service factors less than 1.15, multiply the motor FLA by .90 to select appropriate MMP.

Example: For motor having FLA of 6.4A and service factor of 1.0 (6.4A x .90 = 5.76A) select Catalog Number XTPB6P3B01.

See Application Note — AP03402001E.

For motor with service factor of 1.15 or greater, use motor nameplate Full Load Amperes to select the appropriate MMP.

Example: For motor having FLA of 11A and service factor of 1.15, select Catalog Number XTPR012BC1.

① Select Manual Motor Protectors by full load amperes. Maximum Motor Ratings (kW, hp) are for reference only.

② In this range, calculate motor rating according to rated current. Specified values to NEC 430.6(A)(1).

Notes:

Single-phasing sensitivity to IEC/EN 60947-4-1, VDE 0660 Part 102.
Can be snap-fit to IEC/EN 60715 top-hat (DIN) with 7.5 or 15 mm height.
Service Factor (SF) — Setting I_r of current scale in dependence of load factor:
SF = 1.15 -> $I_r = 1 \times I_n \text{ mot}$
SF = 1 -> $I_r = 0.9 \times I_n \text{ mot}$

For manual motor protective circuit breaker switching capacity, see **Page 34-147**.

① UL 508 Type E starters are assembled from a standard XTPR and a special incoming terminal Line Side Adapter (XTPAXLSA or XTPAXLSAD).

② Select Manual Motor Protectors by full load amperes. Maximum Motor Ratings (kW, hp) are for reference only.

③ In this range, calculate motor rating according to rated current. Specified values to NEC 430.6(A)(1).

Notes:

A UL 508 Type E Self-Protected Manual Combination Starter (XTPR) consists of a Manual Motor Protector (XTPR) and a UL Listed Line Side Adapter (e.g. XTPAXLSA). The Type E Self-Protected Manual Combination Starter alone is a legitimate short-circuit protective device and disconnect means for the downstream motor, while the contactor has been added to provide remote operation of the motor circuit.

① Select Manual Motor Protectors by full load amperes. Maximum Motor Ratings (kW, hp) are for reference only.

② XTPM is not UL/CSA Approved.

Notes:

Can be snap-fit to IEC/EN 60715 top-hat rail with 7.5 or 15 mm height.

An appropriate overload relay must be fitted to protect motors against overload.

Combinations of the XTPM Manual Motor Protectors and XTCE/XTCR Contactors + XTOB Overload Relays can be found in the **XT** Manual and Combination Motor Controllers section.

When using the XTPM as short-circuit protection for motors with heavy starting duty, the rated operational current I_e must be derated during engineering with the following factors:

- Class 5 = 1.0
- Class 10 = 1.0
- Class 15 = 0.82
- Class 20 = 0.71
- Class 25 = 0.63
- Class 30 = 0.58
- Class 35 = 0.53
- Class 40 = 0.50

Accessories

Auxiliary Contacts

Side-Mount Auxiliary Contacts

34

Can be fitted on the right side of manual motor protectors (XTPB, XTPR, XTPM) and manual transformer protectors (XTPT) and can be combined with XTPAXSATR... and XTPAXFA... trip indicating auxiliary contact.

Current Limiter ③

The XTPAXCL enhances the switching capacity of the XT manual motor protectors. It can be used with the XTPB, XTPR...BC1, XTPR...DC1 for individual or group protections. The rated uninterrupted current is 63A for IEC and 25A for UL/CSA. It can be mounted next to or behind the manual motor protector. See Tables 34-184 and 34-185 for ratings when using the current limiter.

Table 34-156. Current Limiter

Description	Contact Sequence	Pkg. Qty.	Catalog Number	Price U.S. \$
To enhance the switching capacity of non-inherently safe 10 – 25A Manual Motor Protectors to 150 kA/440V		1	XTPAXCL	

③ Max. rated operation voltage $U_e = 690V$, rated uninterrupted current $I_u = 63A$. Can be used for individual and group protection. For group protection and in combination with the XTPR...D, order additional XTPAXIT incoming terminal if required. Mounting next to or behind the manual motor protector. 16 – 63A XTPR...D: 100 kA/400V, 10 kA/690V.

Lockable Rotary Handle

Table 34-157. Replacement Lockable Rotary Handle

Description	Pkg. Qty.	Catalog Number	Price U.S. \$ ④
Lockable Rotary Handle that mounts directly to the XTPR manual motor protectors. Comes standard with XTPR.	5	XTPAXLRH	

④ Orders must be placed in multiples of package quantity listed.

IP65 Rotary Handle Mechanism

Table 34-158. IP65 Rotary Handle Mechanism ①②③④

	Description	Enclosure Rating	Pkg. Qty.	Catalog Number	Price U.S. \$ ⑤
Complete Kits — Includes Handle, Shaft, and Required Hardware					
	Rotary Handle Mechanism — Black. ⑥	IP65 NEMA 12 UL/CSA 4X	1	XTPAXRHMB	
	Rotary Handle Mechanism — Red/Yellow. ⑦		1	XTPAXRHMY	
	Rotary Handle Mechanism — Black — Rotated 90° from Vertical. ⑥		1	XTPAXRH90B	
	Rotary Handle Mechanism — Red/Yellow — Rotated 90° from vertical. ⑦		1	XTPAXRH90RY	

Separate Parts

	Rotary Handle Only — Black. ⑥	IP65 NEMA 12 UL/CSA 4X	10	XTPAXRHB10	
	Rotary Handle Only — Red/Yellow. ⑦		10	XTPAXRHRY10	
	Rotary Handle Only — Black — Rotated 90° from vertical. ⑥		10	XTPAXRH90B10	
	Rotary Handle Only — Red/Yellow — Rotated 90° from vertical. ⑦		10	XTPAXRH90RY10	
	Shaft Only — Includes Shaft to mount to XTPR, 175 mm length.	—	10	XTPAXRHMSFT	
	Shaft Only — Includes Shaft to mount to XTPR, 72 mm length, minimum 50 pcs. — Bulk Pack.	—	50	XTPAXRHMSFTB72	
	Shaft Only — Includes Shaft to mount to XTPR, 98 mm length, minimum 50 pcs. — Bulk Pack.	—	50	XTPAXRHMSFTB98	

- ① Plug-in connection shafts, XTPAXRHMSFT_ can be cut to desired length for mounting depths of 100 – 240 mm. Carrier with extension shaft included.
- ② With ON/OFF switch position and "+" (tripped), lockable with 3 padlocks, 4 – 8 mm hasp. Can be locked in the OFF position, if required.
- ③ Rotary Handle Mechanisms ship with door interlock disabled. See instruction publication with product for how to enable door interlock.
- ④ Not for use with XTPAXFAEM20 early-make front mount auxiliary contact.
- ⑤ Orders must be placed in multiples of package quantity listed.
- ⑥ For use on main switches to IEC/EN 60204.
- ⑦ For use on main switches with Emergency-Stop function to IEC/EN 60204.

Sealing Facility

Table 34-159. Sealing Facility

Description	Pkg. Qty.	Catalog Number	Price U.S. \$ ⑤
To prevent tampering with the overload release and the test function. It can be sealed using industry standard sealing wire. For use with XTPR manual motor protectors.	5	XTPAXSW	

- ⑤ Orders must be placed in multiples of package quantity listed.

Manual Motor Protectors

Three-Phase Commoning Links

Frame B

Frame D

For parallel power feed to several manual motor protectors on terminals 1, 3 and 5.

Table 34-160. Three-Phase Commoning Links ①

	For Use with...	Qty. MMP	Length of Link (mm)	Unit Width (mm)	Pkg. Qty.	Catalog Number	Price U.S. \$ ②

	Each MMP with an auxiliary contact or trip-indicating auxiliary contact mounted on the right or a voltage release mounted on the left.	2	128	55 + 18	1	XTPAXCLKC2D	
		4	274	55 + 18	1	XTPAXCLKC4D	

① Protected against accidental contact. B-Frame short circuit proof $U_e = 690V$, $I_u = 63A$; D-Frame short circuit proof $U_e = 690V$, $I_u = 128A$. Frame B links can be combined by rotating mounting. Frame D links cannot be combined.
 ② Orders must be placed in multiples of package quantity listed.

Shroud for Unused Commoning Link Terminals

Table 34-161. Shroud for Unused Terminals of Three-Phase Commoning Links

	For Use with...	Description	Pkg. Qty.	Catalog Number	Price U.S. \$ ①
	B-Frame XTPR	To cover unused terminals on three-phase commoning link. Protected against direct contact.	20	XTPAXUTS	
	D-Frame XTPR		10	XTPAXUTSD	

① Orders must be placed in multiples of package quantity listed.

Incoming Terminal for Three-Phase Commoning Link ②

Table 34-162. Incoming Terminal

	For Use with...	Pkg. Qty.	Catalog Number	Price U.S. \$ ③
	B-Frame XTPR, XTPB	5	XTPAXIT	

② For three-phase commoning link, protected against accidental contact, $U_e = 690V$, $I_U = 63A$; For conductor cross-sections: 2.5 – 25 mm² stranded; 2.5 – 16 mm² flexible with ferrules, AWG 14-6.

③ Orders must be placed in multiples of package quantity listed.

Line-Side Adapter ④

Table 34-163. Line-Side Adapter

	For Use with...	Pkg. Qty.	Catalog Number	Price U.S. \$ ⑤
	B-Frame XTPR to create a UL 508 Type E/F Manual Combination Starter	5	XTPAXLSA	
	D-Frame XTPR to create a UL 508 Type E/F Manual Combination Starter	1	XTPAXLSAD ⑥	

④ XTPAXLSA is for three-phase commoning link, finger- and back-of-hand proof, $U_e = 690V$, $I_U = 60A$ for conductor cross sections: 2.5 – 25 mm² stranded, 2.5 – 16 mm² flexible with ferrule, AWG 14-6.

⑤ Orders must be placed in multiples of package quantity listed.

⑥ XTPAXLSAD cannot be combined with three-phase commoning links.

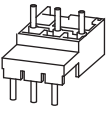

Combination Connection Kits

Time/Current Curve

Characteristics

The time/current characteristic, the current limiting characteristics and the I^2t characteristics were determined in accordance with DIN VDE 0660 and IEC 60 947.

The tripping characteristic of the **inverse-time delayed overload releases** (thermal overload releases or “a” releases) for DC and AC with a frequency of 0 to 400 Hz also apply to the time/current characteristic.

The characteristics apply to the cold state. At operating temperature, the tripping times of the thermal releases are reduced to approximately 25%.

Under normal operating conditions, all three poles of the device must be loaded. The three main conducting paths must be connected in series in order to protect single-phase or DC loads.

With 3-pole loading, the maximum deviation in the tripping time for 3 times the setting current and upwards is $\pm 20\%$ and thus in accordance with DIN VDE 0165.

The tripping characteristics for the instantaneous, electromagnetic overcurrent releases (short-circuit releases or “n” releases) are based on the rated current I_n , which is also the maximum value of the setting range for circuit-breakers with adjustable overload releases. If the current is set to a lower value, the tripping current of the “n” release is increased by a corresponding factor.

The characteristics of the electromagnetic overcurrent releases apply to frequencies of 50/60 Hz. Appropriate correction factors must be used for lower frequencies up to 16-2/3 Hz, for higher frequencies up to 400 Hz and for DC.

Time/current characteristics, current limiting characteristics and I^2t characteristics are available on request.

XT Combination Motor Controller and Manual Motor Controller

Product Description

The new Cutler-Hammer® **XT** IEC Open Non-reversing and Reversing Manual Motor Controllers from Eaton’s electrical business combine a Manual Motor Protector with an IEC Contactor(s) to provide a complete motor protection solution by combining motor disconnect function, thermal overload protection, magnetic short circuit protection and remote control operation in one compact, assembled unit. These assembled Manual Motor Controllers cover motors with FLA ratings from 0.10A to 63A.

The UL 508 Type F labeled Combination Motor Controller (CMC) includes a Line Side Adapter (LSA). These assembled Combination Motor Controllers cover motors with FLA ratings from 0.10A to 52A.

Application Description

The **XT** IEC Non-reversing and Reversing Manual and Combination Motor Controllers can be used in the following applications:

XTSC and XTSR

- Manual Motor Controller for Single and Multi Motor Panels — The pre-assembled **XT** Manual Motor Controllers (MMC) combine a Manual Motor Protector, a Wiring Connector Link and IEC Contactor. MMCs can also be field installed with separate MMP, WCL and Contactor(s). An IEC magnetic contactor has been added to allow for remote operation of the motor circuit.

XTFC and XTFR

- Combination Motor Controller (UL 508, Type F), for Single and Multi Motor Panels — The preassembled IEC Combination Motor Controllers combine a Line Side Adapter, Manual Motor Protector, Wiring Connector Link and IEC Contactor. The XTPR Manual Motor Protectors are UL listed as UL 508, Type E Self-Protected Manual Combination Starters. This UL listing allows these devices to be used in motor circuits without having to add separate branch short circuit protection. An IEC magnetic contactor has been added to allow for remote operation of the motor circuit.
- Group Motor Installations — Since the Manual Motor Protectors (Manual Combination Starters) are UL listed for Group Motor Installations, the IEC Manual Motor Controllers provide a compact, assembled package for Group Motor Installations up to 600V.

For Group Installations (in-panel SCPD) applying the traditional 1/3 tap rule, the Manual Motor Protectors and Combination Motor Controllers may be used on 480V Delta systems along with 480Y/277V and 600Y/347V slash rated Wye systems. For Group Installations, applying the more recent 1/10 tap conductor rule, a maximum 240V Delta is permitted or 480Y/277V and 600Y/347V slash rated Wye systems.

For actual UL 508 Type E/F applications (out-of-panel upstream feeder Short-Circuit Protective Device [SCPD] only), a maximum 240V Delta is permitted or 480Y/277V and 600Y/347V slash rated Wye systems.

For Manual “At Motor” Disconnect applications, a maximum 240V Delta is permitted or 480Y/277V and 600Y/347V slash rated Wye systems.

Features

- ON/OFF rotary handle with lockout provision
- Visible trip indication
- Test trip function
- Motor applications from 0.10A to 63A
- Class 10 overload protection
- Built-in heater and magnetic trip elements to protect the motor
- Phase loss sensitivity
- Type 2 coordination
- Ambient compensated up to 55°C [140°F]
- Control inputs located at front of starter for easy access and wiring
- Wide range of coils
- DIN Rail mount — XTSC...BB_
- Mounting plates — XTSC...BC_, XTSC...D motor controllers
- Adjustment dial for setting motor FLA
- Short circuit trip at 14 times the maximum setting of the FLA adjustment dial
- UL 508 Type F CMC High Fault Short Circuit Ratings: Refer to **Table 34-198**.
- 1NO-1NC Auxiliary Contact as standard on Manual Motor Controller and Combination Motor Controller

Combination Motor Controllers

Standards and Certifications

UL 508 Type F Combination Motor Controller

- IEC Type 2 Approved per IEC 60947-4-1
- UL Listed File No. E245398
- CE Mark

Note: For Type 2 Coordination of MMCs, see Tables 34-249 through 34-251 on Pages 34-210 and 34-211.

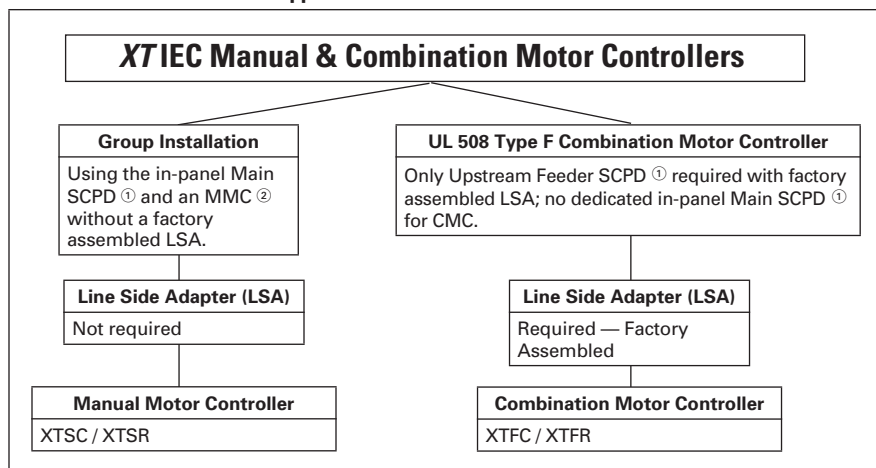

Protection in Different Controller Types

A UL 508 Type E Self-protected Manual Combination Starter/Motor Controller consists of a single device having integral short circuit protection, a main set of contacts, motor overload protection, and may also include a UL listed Line Side Adapter (see Table 34-187). This type of controller is a legitimate short circuit protective device and disconnect means for the downstream motor. It does require an upstream feeder short circuit protective device, but does not require a dedicated branch circuit protection or a disconnect means if used with a Line Side Adapter. A UL 508 Type E rating means that the unit clears a fault and does not experience any welding of the power poles. A UL 508 Type E self-protected manual motor controller will remain fully functional should a short circuit within its ratings occur. *E.g.* XTPR.

An **XT** UL 508 Type F Self-protected Combination Motor Controller consists of a UL Listed Type E Self-protected Manual Combination Starter/Motor Controller, a UL Listed Contactor, and a UL Listed Line Side Adapter (see Table 34-187). While the UL 508 Type E self-protected manual motor protector of this combination motor controller device is a legitimate short circuit protective device and disconnect means for the downstream motor, the contactor is *not* "self-protected." *E.g.* XTFC, XTFR.

In addition, as a complete assembly or modular components, the device should have Type 2 Coordination certification. Type 2 Coordination means the Starter or the Controller must exhibit little or no damage following a major short circuit fault and should be able to be returned to proper service without replacing any parts.

Table 34-187. MMC and CMC Applications

① SCPD = Short Circuit Protective Device (Circuit Breaker, Fuses).

② MMC = Manual Motor Controller

Reference: Technical Paper AP03402001E.

Note: Line Side Adapters are not required for non-U.S. applications. Most countries outside of the U.S. classify the MMP as a thermal magnetic circuit breaker.

- ① Select Manual Motor Protectors by full load amperes. Maximum Motor Ratings (kW, hp) are for reference only. For additional voltages not listed, see Table 34-194 on Page 34-165.
- ② In this range, calculate motor rating according to rated current. Specified values to NEC 430.6(A)(1).
- ③ Underscore (_) indicates Magnetic Coil Suffix required. See Table 34-191 on Page 34-162.

Notes:

The assembled Manual Motor Controller (MMC) consists of an XTPR Manual Motor Protector (MMP) and an XTCE contactor. For Frame B MMP + Frame B Contactor assemblies, the XTSC and XTSR can be mounted directly on DIN rail without an adapter. The contactors are supported mechanically with a mechanical connection element (included in XTPAXTPCB, XTPAXRPCRB). For 16A and above, the assembly is mounted via a DIN Rail Adapter Plate (XTPAXTPCPC, XTPAXTPCPD) and the electrical connection is made with electrical contact modules (XTPAXECMC, XTPAXECMD), both included in XTPAXTPCC and XTPAXTPCD. For detailed component lists, see Table 34-195, Page 34-166.

Service Factor Settings: Setting I_r of current scale in dependence of load factor:

SF = 1.15 → I_r = 1 × I_n mot
 SF = 1 → I_r = 0.9 × I_n mot

Single-phasing sensitivity to IEC/EN 60947-4-1, VDE 0660 Part 102.

- ① Select Combination Motor Controllers by full load amperes. Maximum Motor Ratings (kW, hp) are for reference only. For additional voltages not listed, see **Table 34-194** on **Page 34-165**.
- ② In this range, calculate motor rating according to rated current. Specified values to NEC 430.6(A)(1).
- ③ Underscore (_) indicates Magnetic Coil Suffix required. See **Table 34-191** on **Page 34-162**.

Notes:

The assembled Combination Motor Controller (CMC) consists of an XTPR Manual Motor Protector (MMP) and an XTCE contactor and a required Line Side Adapter. For Frame B MMP + Frame B Contactor assemblies, the XTFC and XTFR can be mounted directly on DIN rail without an adapter. The contactors are supported mechanically with a mechanical connection element (included in XTPAXTPCB, XTPAXRPCRB). For 16A and above, the assembly is mounted via a DIN Rail Adapter Plate (XTPAXTPCPC, XTPAXTPCPD) and the electrical connection is made with electrical contact modules (XTPAXECMC, XTPAXECMD), both included in XTPAXTPCC and XTPAXTPCD. For detailed component lists, see **Table 34-196**, **Page 34-167**.

Service Factor Settings: Setting I_r of current scale in dependence of load factor:
 SF = 1.15 → I_r = 1 × I_n mot
 SF = 1 → I_r = 0.9 × I_n mot

Single-phasing sensitivity to IEC/EN 60947-4-1, VDE 0660 Part 102.

Accessories

Line Side Adapters

Line Side Adapters are required for use with XTPR MMPs only when used as Type E Self-Protected Manual Combination Starters or as part of XTFC or XTFR Type F Combination Motor Controllers. Not required for Group Installation.

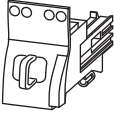

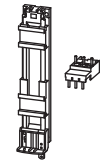

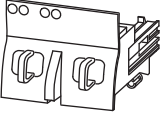

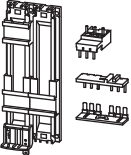

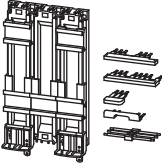

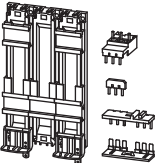

Table 34-192. Line Side Adapters

	Description	Catalog Number	Price U.S. \$
	For use with Frame B MMPs (up to 32A)	XTPAXLSA	
	For use with Frame D MMPs (up to 40A)	XTPAXLSAD	

Combination Connection Kits

Combination Connection Kits include the necessary components to field assemble a Manual Motor Controller with an MMP (XTPR) and Contactor (XTCE).

Table 34-193. Combination Connection Kits

① Underscore (_) indicates Magnetic Coil Suffix required. See Table 34-191 on Page 34-162.

② The connection between the XTPR...DC1 and the XTCE...C... contactor will be made with flexible wire and mounted to the DIN Rail Adapter Plate (XTPAXTPCPD).

③ The reversing connection between the XTPR...DC1 and the (2) XTCE...C... contactors will be accomplished by using the non-reversing combination connection kit (XTPAXTPCD), Frame D reversing link kit (XTCEXRLD), additional DIN Rail Adapter Plate (XTPAXTPCPD), and DIN Adapter Connection Element (XTPAXCNE).

ECX Enclosed Control

34

Product Description

Eaton's Cutler-Hammer® **XT** Line includes IEC Contactors, Starters and Combination Motor Controllers (CMCs). Designed to meet International Standards, the Enclosed Control **XT** Line (ECX), carries UL and cUL certifications.

Features and Benefits

- AC control from 12V to 600V 50/60 Hz
- DC control from 12V to 220V
- Available with screw or spring cage terminals
- Reversing or non-reversing contactors and starters
- AC-3 contactor ratings to 1000A and AC-1 contactor ratings to 2000A
- Non-reversing starters to 650A
- Panel or DIN rail mounting to 65A
- IP20 finger and back-of-hand proof
- Large ambient temperature range, -25 to 50°C [-13 to 122°F]
- AC and DC controlled contactors in the same compact frame
- Low power consumption DC coils
- Built-in NO or NC auxiliary contacts to 32A
- Plug-in accessories for reduced installation time
- Nonmetallic and metallic enclosures in Types 1 (IP23), 4 (IP66), 4X (IP66), 12 (IP65) and 3R (IP32)
- Circuit breakers, fused, non-fused and non-combination designs available
- Opaque (standard) or clear covers available on nonmetallic Halyester enclosure option

Short Circuit Ratings

- Fused, Non-fused
 - 10K AIC @ 600V
- HMCP
 - 0 – 10 hp 15K AIC @ 600V
 - 15 – 125 hp 25K AIC @ 600V
- Non-combination
 - 0 – 1 hp 1K AIC @ 600V
 - 1.5 – 50 hp 5K AIC @ 600V
 - 50 – 200 hp 10K AIC @ 600V

Standards and Certifications

Note: See Enclosed Control Product Guide PG0300001E for additional information on Standards and Certifications that apply to all Cutler-Hammer Enclosed Control products.

- Fusible — with Class J fuses
 - UL Listed
 - cUL Listed ①
- Circuit Breaker HMCP/E
 - UL Listed
 - cUL Listed ①

① cUL Listing indicates appropriate CSA standard investigation.

Catalog Number Selection

Table 34-199. IEC XT Line Enclosed Control Catalog Numbering System

Cover Control

Non-combination Starters

Control Power Transformer (CPT) may be required.

Combination Starters

- Cover control for Combination Starters uses 10250T style devices as standard.
- E22 style cover control options are available (Table 34-203).
- Selector switches are maintained with lever operators.
- Pushbuttons are momentary type with extended pushbutton.
- The kit includes hardware and connecting wires (where possible).
- For factory installed control devices other than shown below, refer to Modification Codes, **PG03300001E**.

① 1 hp = 0.746 kW.

② Voltage is listed @ 60 Hz unless otherwise noted. Other voltages available upon request.

③ Select proper "XTOB" Overload Amperage range as per motor FLA, see Table 34-200.

④ These are the Catalog Numbers for Type 4X 304-Grade Stainless Steel, as indicated by the seventh digit 4. Example: ECX10B4AAA_ . To order Type 4X 316-Grade Stainless Steel, change that digit to 9. To order Type 4 Painted Steel, change that digit to 3. To order Nonmetallic, change that digit to 5. For details on these Alternate Enclosures, see PG03300001E.

⑤ Contact factory for other voltage options.

① 1 hp = 0.746 kW.

② Voltage is listed @ 60 Hz unless otherwise noted. Other voltages available upon request.

③ Select proper "XTOB" Overload Amperage range as per motor FLA, see Table 34-200.

④ These are the Catalog Numbers for Type 4X 304-Grade Stainless Steel, as indicated by the seventh digit 4. Example: ECX19B4AAA-. To order Type 4X 316-Grade Stainless Steel, change that digit to 9. To order Type 4 Painted Steel, change that digit to 3. To order Nonmetallic, change that digit to 5. For details on these Alternate Enclosures, see PG03300001E.

⑤ Contact factory for other voltage options.

⑥ Non-fused Disconnect only.

① 1 hp = 0.746 kW.
 ② Voltage is listed @ 60 Hz unless otherwise noted. Other voltages available upon request.
 ③ Select proper "XTOB" Overload Amperage range as per motor FLA, see Table 34-200.
 ④ These are the Catalog Numbers for Type 4X 304-Grade Stainless Steel, as indicated by the seventh digit 4. Example: ECX20B4AAA-. To order Type 4X 316-Grade Stainless Steel, change that digit to 9. To order Type 4 Painted Steel, change that digit to 3. To order Nonmetallic, change that digit to 5. For details on these Alternate Enclosures, see PG03300001E.
 ⑤ Contact factory for other voltage options.
 ⑥ Non-fused Disconnect only.

Enclosed XT CMC

Product Description

Eaton's Cutler-Hammer® **XT** Line includes IEC Contactors, Starters and Combination Motor Controllers (CMCs). Designed to meet International Standards, the Enclosed Control **XT** Line (ECX) carries UL and cUL certifications.

Features and Benefits

- ON/OFF rotary handle with lockout provision
- Visible trip indication
- Test trip function
- Motor applications from 0.11A to 32A
- Class 10 overload protection
- Built-in heater and magnetic trip elements to protect the motor
- Phase loss sensitivity
- Type 2 coordination
- Ambient compensated up to 55°C [140°F]
- Control inputs located at front of starter for easy access and wiring
- Wide range of coils
- DIN Rail mount — XTSC...BB_
- Mounting plates — XTSC...BC_, XTSC...D motor controllers
- Adjustment dial for setting motor FLA
- Short circuit trip at 14 times the maximum setting of the FLA adjustment dial
- UL 508 Type F CMC High Fault Short Circuit Ratings: Refer to Manual Motor Protectors in **CA08102001E**.
- Nonmetallic and metallic enclosures in Types 1 (IP23), 4 (IP66), 4X (IP66) and 12 (IP65)
- Opaque (standard) or clear covers available on nonmetallic Halcyon enclosure

Short Circuit Ratings

- 0 – 12A/B-frame MMP with B-frame contactor
 - 50K AIC @ 600V
- 13 – 32A/B-frame MMP with C-frame contactor
 - 18K AIC @ 600V

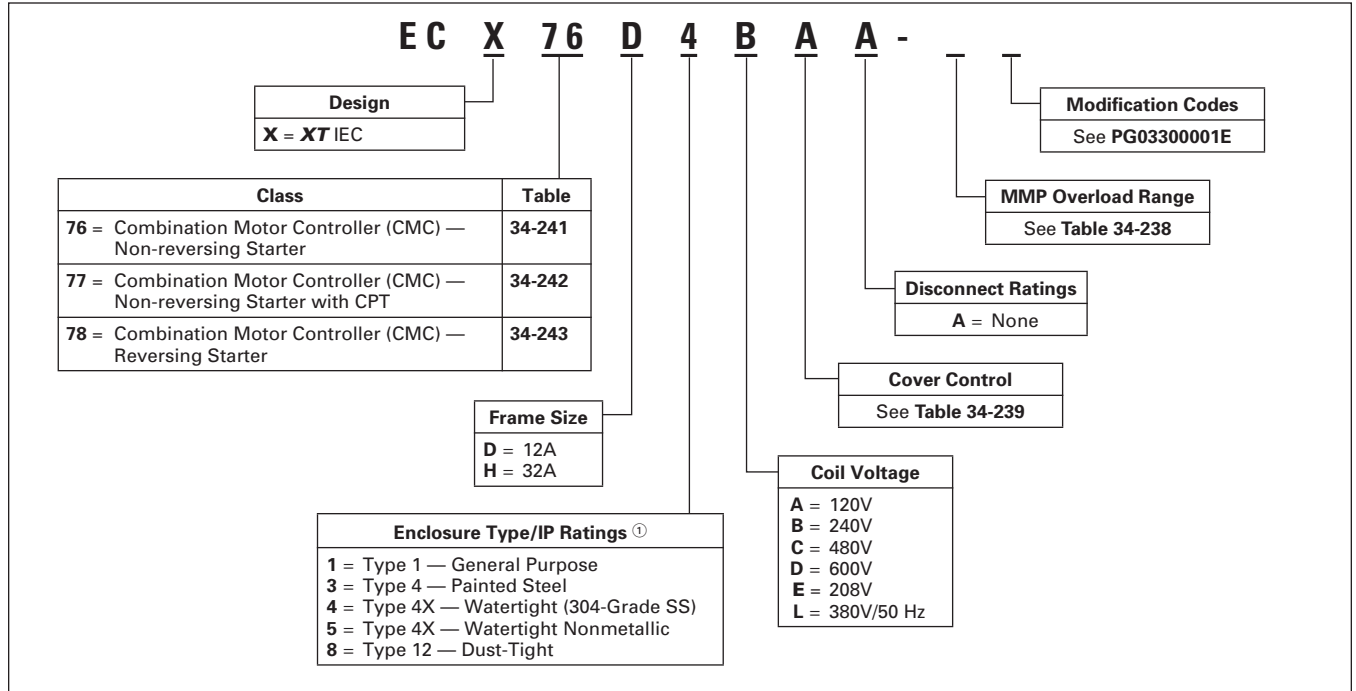

Standards and Certifications

Note: See Enclosed Control Product Guide PG03300001E for additional information on Standards and Certifications that apply to all Cutler-Hammer Enclosed Control products.

- UL Listed
- cUL Listed (indicates appropriate CSA Standard investigation)

Catalog Number Selection

Table 34-237. Combination Motor Controllers — Enclosed Control Catalog Numbering System

① See PG03300001E for Enclosure Type/IP Rating Cross-Reference.

Combination Motor Controllers — Enclosed Control

Cover Control

- Cover control for Combination Motor Control Starters uses the 10250T (30 mm) family.
- E22 style cover control is an available option.
- Selector switches are maintained with lever operators.
- Pushbuttons are momentary type with extended pushbutton.
- The kit includes hardware and connecting wires (where possible).
- For factory installed control devices other than shown below, refer to Modification Codes, **PG03300001E**.

OPEN/OFF/CLOSE SS, Red FWD/REV, & Green STOPPED	X	CE400T58 ^②	

① To include any of the above cover controls, place the control code character in position 9 of your Catalog Number and add Mod Code **P74**. Example: ECX77H1ADA-P74. Full voltage non-reversing fusible starter with interchangeable heater OLR and START/STOP pushbutton with red RUN and green OFF pilot lights.

② Suffix for lights (required for field installed kits only) in the table below:

Rating	Catalog Suffix	Rating	Catalog Suffix
120V 60 Hz	A	277V 60 Hz	H
208V 60 Hz	E	380V 50 Hz	L
240V 60 Hz	B	460V 60 Hz	C
		600V 60 Hz	D

Note: All CMC design built in enclosure Size 5 do not contain a CPT. In order to supply internal power for cover control, the enclosure must increase to Size 6. If control power is to be supplied from a source outside of the enclosure, there is no need to oversize. Note that 32A and less FVNR designs permit room for a 24V DC power supply to be installed.

Reference Data

Type 2 Coordination

What is it?

The International Electrotechnical Commission (IEC) developed short circuit performance criteria for contactors and starters called Type 1 coordination and Type 2 coordination. This defines motor controller protection levels following a short circuit fault. In order to achieve this performance, the combination of a motor controller (contactor or starter) and short circuit protective device (manual motor protector, circuit breaker or fuse) must meet the following criteria as specified by IEC 60947-4-1 — Low

voltage switchgear and controlgear — Part 4-1: Contactors and motor-starters — Electromechanical contactors and motor-starters:

Type 1 Coordination requires that under short circuit conditions, the contactor or starter shall cause no danger to persons or installation and may not be suitable for further service without repair and replacement of parts.

In this case, *significant damage is allowed* to the contactor/starter (e.g. contact welding, burning, or disintegration) and the overload relay (e.g. component harm or heater element burn-out).

Type 2 Coordination requires that under short circuit conditions, the contactor or starter shall cause no danger to persons or installation and shall be suitable for further use. The risk of contact welding is recognized, in which case the manufacturer shall indicate the measures to be taken as regards to the maintenance of the equipment.

In this case, the contactor/starter is *able to continue use* after the occurrence of a short circuit fault. Light contact burning or tack welding may occur provided the contacts are easily separable.

Reference Data

Wye-Delta (Star-Delta) Applications

If Type 2 Coordination is required when using Wye-Delta starters, the full voltage (direct on-line) test data that is included in this document is valid. To ensure proper protection, the K1M (Main), K3M (Star) and K5M (Delta) contactors must all be the same size (amperage). For Wye-Delta starter kits, please see **Page 34-44**.

Approvals for World Markets

Overview

The **XT** line of products is approved for use throughout the world, including the USA and Canada. As such, they can be used without restriction as devices for world markets.

The majority of countries permit the import of devices on the manufacturer's undertaking that they have been constructed in accordance with the pertinent specifications. In the USA and Canada, however, there is a legal obligation to obtain official approval. In these countries, devices and enclosures — sometimes even complete control systems — are tested and approved by independent bodies.

In Europe, there also used to be a legal obligation to obtain official approval for low-voltage switchgear and controlgear. For industrial control gear, this legal obligation has now been abolished, provided the devices have been manufactured and tested in accordance with harmonized European standards (such as IEC/EN 60947). There is then no longer a requirement for them to carry their country's own approval mark.

Since January 1997, all devices must conform to the European Low-Voltage Directive and, where intended for sale within the European Union, must carry the CE mark.

Europe
Conformité Européen
(CE)

This mark denotes that the device carrying it conforms to all relevant requirements and specifications. The mandatory application of this mark therefore enables the unrestricted use of marked devices within the European economic area.

Since January 1996, all devices sold within the European union must comply with the Electromagnetic Compatibility (EMC) Directive. **XT** has passed the required tests to these Directives, and the devices carry the CE mark, demonstrating compliance with the EMC Directive. *Because devices bearing the CE mark comply with the harmonized standards, approval and the associated marking is no longer required in the following countries:*

Belgium
Comité Electro-technique Belge
Belgisch Elektro-technisch Comité (CEBEC)

Denmark
Danmarks Elektriske Materielkontrol (DEMKO)

Finland
(FIMKO)

France
Union Technique de l'Electricité (UTE)

Netherlands
Naamloze Vennootschap tot Keuring van Electrotechnische Materialien (KEMA)

Norway
Norges Elektriske Materielkontrol (NEMKO)

Sweden
Svenska Elektriska Materiel-Kontrollanstalten (SEMKO)

Switzerland
Schweizerischer Elektrotechnischer Verein (SEV)

Devices the USA and Canada have UL and CSA approval.

USA
Underwriters Laboratories (UL)

Listing

Recognition

Canada
Canadian Standards Association (CSA)

Recently introduced is the mandatory approval of electrical products for:

- Slovakia
- Poland
- South Africa
- China
- Russia
- Turkey
- Argentina

Marking is partly mandatory for these countries. The IEC rating data is accepted as in other European countries.

Approval is not mandatory in the Czech Republic and Hungary. The manufacturer's declaration of conformity is sufficient here.

Romania requires that components that are to be used in public buildings must be approved by the Romanian test authority ICECON.

Russia
Devices for Russia must bear the appropriate marking.

Selection of Devices

"Selection appropriate for export" does not mean merely meeting the requisite approvals and conformity to relevant specifications. The meaning of the term goes a great deal further by even including that equipment and installations must be designed to a concept with export in mind.

Reference Data

The following are important criteria for selecting switchgear suitable for export:

■ **For motor-protective circuit-breakers**

Use inherently short-circuit proof switches capable of controlling the highest prospective fault levels at the point of installation without the need for back-up protection.

□ **Advantage:**

- No restrictions whatsoever for installation
- Complete independence from the on-site protective system
- No problems getting spare parts

■ **For circuit-breakers**

Use types with visible contacts, quick-make and quick-break operation as standard. Use current-limiting circuit-breakers for high short-circuit levels. Selective switches are recommended for the selective graduation of networks.

□ **Advantage:**

- Independence from local accident prevention regulations requiring visible contacts, and safety faults caused by inexperienced operating personnel.
- The effects of short-circuits are kept to a minimum.
- Fuseless installations offer greater safety and reliability in plant operation. In the event of a fault, only the faulty section of the system is isolated.

■ **For contactors**

Use contactors whose entire range provides consistently reliable operation in the event of voltage drops (consistently down to 80% U_n should be aimed for) and whose contact system will not assume an indeterminate position either on closing or on opening in such conditions.

□ **Advantage:**

- During the electrification work in areas such as Africa and the Middle East, an insufficient voltage stability is — at least for a certain time — likely in many applications (for example due to long spur lines or small local generators). The use of devices that fulfill the above requirements will eliminate one of the main failure causes related to contactors.

■ **For enclosures**

Use insulated enclosures with transparent covers (i.e. “totally insulated” enclosures).

□ **Advantage:**

- Total insulation is the best possible protective measure from the user's point of view, avoiding reliance on the possibly doubtful skills of unknown installation personnel. Furthermore, protective measures based on earthing are often extremely difficult, if not impossible (in the Middle East, for example, due to the dryness of the ground).
- Insulated enclosures completely eliminate the need for any additional protection against corrosion. The transparent covers contribute significantly to the correct operation of a system, because switchgear operation can be monitored even with the doors or covers closed, thus virtually eliminating the possibility of these being left open through carelessness. The transparent cover is an important contribution to safety, especially where exports to areas of uncertain skills are concerned.

■ **For overcurrent protective devices**

Always use circuit-breakers and motor-protective circuit-breakers. Avoid fuses as far as possible.

□ **Advantage:**

- The operational reliability of a system is especially important for export contracts. Circuit-breakers and motor-protective circuit-breakers provide this reliability in full measure since they can be immediately reclosed once a fault has been cleared, they disconnect all poles, they have ideal protection through high tripping accuracy and they can be used for selective operation. Because they have no fuses or other consumables, they also greatly reduce the problem of obtaining replacement parts. The advantages of fuseless design for export are especially evident in this case. No complicated investigation is needed to find out which fusing system is used in the respective location and which specifications have to be followed to select the correct fuses. Often several different fuse systems with widely varying characteristics are used side-by-side in the same country. For the uninitiated, it may be almost impossible to find

the right fuse in these circumstances. These problems do not arise where a circuit-breaker is used.

■ **For main switches and safety switches**

Use devices with positive contact separation and clear switch position indication.

□ **Advantage:**

- The mechanical coupling of the actuating element with the contacts ensures that the OFF position is indicated only when all main contacts are separated by the prescribed distance, and only in this position can the switch be padlocked. This ensures safety when carrying out maintenance and repair work on the installation or machinery.

Approvals for North America

In the USA, the legally established OSHA (Occupational Safety and Health Act) and the NEC (National Electrical Code) require the use of approved devices and systems.

In Canada, all electrical apparatus must comply with the CEC (Canadian Electrical Code), requires that all equipment and installations have CSA approval.

In addition to the normal UL and CSA approvals, the trade regulations originating from the NAFTA agreements allow the application for a joint UL and CSA approval. The devices then carry a logo that is recognized in both countries.

Some local inspectors and end users still refuse to accept the joint listing.

Table 34-262. Approvals for North America

Type of Approval	Approval Mark
The device is UL- and CSA-approved as discrete device.	
The device is CSA-approved as discrete device.	
The device is UL-approved as discrete device.	
The device contains UL-approved components; its approval conditions must be maintained in use (UL Recognized). The device is CSA-approved as discrete device.	

Reference Data

IEC Utilization Categories

(See also IEC/EN 60947-1;
2.1.18/IEV 441-17-19)

A combination of specified requirements relating to the condition in which the switching device or fuse fulfills its purpose and selected to represent a characteristic group of real-life applications. The specified requirements may, for example, relate to the values of making and breaking capacity and other characteristic values, data concerning associated circuits and the applicable conditions of use and operational behavior.

Table 34-263. Used in Technical Data & Formula

Code	Descriptions
DF	Duty factory
$I_{\Delta n}$	Response value of earth-fault release
I_{cm}	Rated short-circuit making capacity
I_{cn}	Rated short-circuit breaking capacity
I_{cs}	Rated service short-circuit breaking capacity
I_{cu}	Rated ultimate short-circuit breaking capacity
I_{cw}	Rated short-time withstand current
I_e	Rated operational current
I_k	Transformer initial short-circuit AC current
I_L	Load monitoring response value
I_n	Rated current
I_{NT}	Transformer rated current
I_{PK}	Rated peak withstand current
I_q	Rated conditional short-circuit current
I_r	Overcurrent release set value
I_{rm}	Response value of non-delayed short-circuit release
I_i	Response value of non-delayed short-circuit release
I_{rmf}	Response value of fixed, non-delayed short-circuit release

Code	Descriptions
I_{rmv}	Response value of short-time delayed short-circuit release
I_{sd}	Response value of short-time delayed short-circuit release
I_T	Response value of earth-fault release
I_g	Response value of earth-fault release
I_{th}	Conventional free air thermal current
I_{the}	Conventional thermal current of enclosed devices
I_u	Rated uninterrupted current
S_{NT}	Transformer rating
t_r	Time delay of overload release response
t_T	Time delay of earth-fault release response
t_g	Time delay of earth-fault release response
t_v	Time delay of short-circuit release response
U_c	Rated actuating voltage
U_e	Rated operational voltage
U_i	Rated insulation voltage
U_{imp}	Rated impulse withstand voltage
U_k	Transformer short-circuit voltage
U_s	Rated control voltage

Annex A (informative)

Table 34-264. Examples of Utilization Categories for Low-Voltage Switchgear and Controlgear ①

Category	Typical Applications	Relevant IEC Product Standard
Nature of Current — AC		
AC-1	Non-inductive or slightly inductive loads, resistance furnaces	60947-4-1
AC-2	Slip-ring motors: starting, switching off	60947-4-1
AC-3	Squirrel-cage motors: starting, switching off motors during running	60947-4-1
AC-4	Squirrel-cage motors: starting, plugging ②, inching ③	60947-4-1
AC-5a	Switching of electric discharge lamp controls	60947-4-1
AC-5b	Switching of incandescent lamps	60947-4-1
AC-6a	Switching of transformers	60947-4-1
AC-6b	Switching of capacitor banks	60947-4-1
AC-7a	Slightly inductive loads for household appliances and similar applications	61095
AC-7b	Motor-loads for household applications	61095
AC-8a	Hermetic refrigerant compressor motor control with manual resetting of overload releases	60947-4-1
AC-8b	Hermetic refrigerant compressor motor control with automatic resetting of overload releases	60947-4-1
AC-12	Control of resistive loads and solid-state loads with isolation by optocouplers	60947-5-1
AC-12	Control of resistive loads and solid-state loads with optical isolation	60947-5-2
AC-13	Control of solid-state loads with transformer isolation	60947-5-1
AC-14	Control of small electromagnetic loads	60947-5-1
AC-15	Control of AC electromagnetic loads	60947-5-1
AC-20	Connecting and disconnecting under no-load conditions	60947-3
AC-21	Switching of resistive loads, including moderate overloads	60947-3
AC-22	Switching of mixed resistive and inductive loads, including moderate overloads	60947-3
AC-23	Switching of motor loads or other highly inductive loads	60947-3

① 60947-1 © IEC: 2004.

② By plugging is understood stopping or reversing the motor rapidly by reversing motor primary connections while the motor is running.

③ By inching (jogging) is understood energizing a motor once or repeatedly for short periods to obtain small movements of the driven mechanism.

Annex A (informative)

Table 34-264. Examples of Utilization Categories for Low-Voltage Switchgear and Controlgear ① (Continued)

Category	Typical Applications	Relevant IEC Product Standard
Nature of Current — AC (Continued)		
AC-31	Non inductive or slightly inductive loads	60947-6-1
AC-33	Motor loads or mixed loads including motors, resistive loads and up to 30% incandescent lamp loads	60947-6-1
AC-35	Electric discharge lamp loads	60947-6-1
AC-36	Incandescent lamp loads	60947-6-1
AC-40	Distribution circuits comprising mixed resistive and reactive loads having a resultant inductive reactance	60947-6-2
AC-41	Non-inductive or slightly inductive loads, resistance furnaces	60947-6-2
AC-42	Slip-ring motors: starting, switching off	60947-6-2
AC-43	Squirrel-cage motors: starting, switching off motors during running	60947-6-2
AC-44	Squirrel-cage motors: starting, plugging ②, inching ③	60947-6-2
AC-45a	Switching of electric discharge lamp controls	60947-6-2
AC-45b	Switching of incandescent lamps	60947-6-2
AC-51	Non-inductive or slightly inductive loads, resistance furnaces	60947-4-3
AC-52a	Control of slip ring motor stators: 8 h duty with on-load currents for start, acceleration, run	60947-4-2
AC-52b	Control of slip ring motor stators: intermittent duty	60947-4-2
AC-53a	Control of squirrel-cage motors: 8 h duty with on-load currents for start, acceleration, run	60947-4-2
AC-53b	Control of squirrel-cage motors: intermittent duty	60947-4-2
AC-55a	Switching of electric discharge lamp controls	60947-4-3
AC-55b	Switching of incandescent lamps	60947-4-3
AC-56a	Switching of transformers	60947-4-3
AC-56b	Switching of capacitor banks	60947-4-3
AC-58a	Control of hermetic refrigerant compressor motors with automatic resetting of overload releases: 8 h duty with on-load currents for start, acceleration, run	60947-4-2
AC-58b	Control of hermetic refrigerant compressor motors with automatic resetting of overload releases: intermittent duty	60947-4-2
AC-140	Control of small electromagnetic loads with holding (closed) current ≤ 0,2 A, e.g. contactor relays	60947-5-2
Nature of Current — AC and DC		
A	Protection of circuits, with no rated short-time withstand current	60947-2
B	Protection of circuits, with a rated short-time withstand current	60947-2
Nature of Current — DC		
DC-1	Non-inductive or slightly inductive loads, resistance furnaces	60947-4-1
DC-3	Shunt-motors: starting, plugging ②, inching ③, Dynamic breaking of motors	60947-4-1
DC-5	Series-motors: starting, plugging ②, inching ③, Dynamic breaking of motors	60947-4-1
DC-6	Switching of incandescent lamps	60947-4-1
DC-12	Control of resistive loads and solid-state loads with isolation by optocouplers	60947-5-1
DC-12	Control of resistive loads and solid-state loads with optical isolation	60947-5-2
DC-13	Control of electromagnets	60947-5-1
DC-13	Control of electromagnets	60947-5-2
DC-14	Control of electromagnetic loads having economy resistors in circuit	60947-5-1
DC-20	Connecting and disconnecting under no-load conditions	60947-3
DC-21	Switching of resistive loads, including moderate overloads	60947-3
DC-22	Switching of mixed resistive and inductive loads, including moderate overloads (e.g. shunt motors)	60947-3
DC-23	Switching of motor loads or other highly inductive loads (e.g. series motors)	60947-3
DC-31	Resistive loads	60947-6-1
DC-33	Motor loads or mixed loads including motors	60947-6-1
DC-36	Incandescent lamp loads	60947-6-1
DC-40	Distribution circuits comprising mixed resistive and reactive loads having a resultant inductive reactance	60947-6-2
DC-41	Non-inductive or slightly inductive loads, resistance furnaces	60947-6-2
DC-43	Shunt-motors: starting, plugging ②, inching ③, Dynamic breaking of DC	60947-6-2
DC-45	Series-motors: starting, plugging ②, inching ③, Dynamic breaking of DC	60947-6-2
DC-46	Switching of incandescent lamps	60947-6-2

① 60947-1 © IEC: 2004.

② By plugging is understood stopping or reversing the motor rapidly by reversing motor primary connections while the motor is running.

③ By inching (jogging) is understood energizing a motor once or repeatedly for short periods to obtain small movements of the driven mechanism.

Motor Ratings Data

Ampere Rating of AC and DC Motors

Ampere ratings of motors vary somewhat, depending upon the type of motor. The values given below are for drip-proof, Class B insulated (T Frame) where available, 1.15 service factor, NEMA Design B motors. These values represent an average full load motor current which was calculated from the motor performance data published by several motor manufacturers. In the case of high torque squirrel cage motors, the ampere ratings will be at least 10% greater than the values given below.

Ampere Ratings of Three-Phase, 60 Hz, AC Induction Motor

hp	Syn. Speed RPM	Current in Amperes					
		200V	230V	380V ①	460V	575V	2200V

Reference Data

Single-Phase AC Motors

Table 430.248. Full-Load Currents in Amperes, Single-Phase Alternating-Current Motors

The following values of full-load currents are for motors running at usual speeds and motors with normal torque characteristics. Motors built for especially low speeds or high torques may have higher full-load currents and multispeed motors will have full-load current varying with speed, in which case the nameplate current ratings shall be used.

The voltages listed are rated motor voltages. The currents listed shall be permitted for system voltage ranges of 110 to 120 and 220 to 240V.

10	100	57.5	55	50

Three-Phase AC Motors

The following values of full-load currents are typical for motors running at speeds usual for belted motors and motors with normal torque characteristics.

Motors built for low speeds (1,200 RPM or less) or high torques may require more running current and multispeed motors will have full-load current varying with speed. In these cases the nameplate current rating shall be used.

The voltages listed are rated motor voltages. The currents listed shall be permitted for system voltage ranges of 110 to 120, 220 to 240, 440 to 480 and 550 to 600V.

DC Motors

Table 430.247. Full-Load Current in Amperes, Direct-Current Motors

The following values of full-load currents are for motors running at base speed.

^② Unless otherwise specifically permitted elsewhere in this Code, the overcurrent protection for conductor types marked with an obelisk (†) shall not exceed 15A for No. 14, 20A for No. 12 and 30A for No. 10 copper; or 15A for No. 12 and 25A for No. 10 aluminum and copper-clad aluminum after any correction factors for ambient temperature and number of conductors have been applied.

Table 310.15 (B)(z)(a). Adjustment Factor for More Than Three Current-Carrying Conductors in Raceway or Cable

Where the number of current-carrying conductors in a raceway or cable exceeds three, the allowable ampacities shall be reduced as shown in the following table:

Number of Current-Carrying Conductors	Percent of Values in Tables as Adjusted for Ambient Temperature if Necessary
4 – 6	80
7 – 9	70
10 – 20	50
21 – 30	45
31 – 40	40
41 and above	35

Where single conductors or multiconductor cables are stacked or bundled longer than 24 in. (610 mm) without maintaining spacing and are not installed in raceways, the allowable ampacity of each conductor shall be reduced as shown in the above table.

Ampacities of Insulated Conductors (Based on 2005 NEC ①) — Continued

Reference Data

Enclosure Ratings

The UL, NEMA and IEC organizations (and other international groups) define degrees of protection provided by electrical enclosures with respect to personnel, equipment within the housing and the ingress of water.

Subtle differences do exist between the test procedures and specifications of these organizations.

To claim ratings to NEMA specifications, the testing is performed and certified by the manufacturers themselves.

To comply to UL and IEC specifications, the manufacturers must submit product samples, materials used and other data to an independent testing laboratory before ratings can be claimed.

In addition, IEC "IP" ratings differ from NEMA in that they do not apply to protection against the risk of explosion or conditions such as humidity, corrosive gases, fungi or vermin. In addition, different parts of the equipment can have different degrees of protection and still comply.

Table 34-265 is a comparison of the NEMA/UL/IEC enclosure specifications to be used as an approximate reference only. **Do not use the table to convert from IEC to NEMA designations.** For a definition of the ratings listed, see examples below and tables on **Page 34-227**.

Protected against contact and penetration of solid bodies.	
0	Not protected.
1	Protection against solid objects greater than 50 mm.
2	Protection against solid objects greater than 12 mm.
3	Protection against solid objects greater than 2.5 mm.
4	Protection against solid objects greater than 1.0 mm.
5	Dust protected.
6	Dust-tight.

Table 34-268. 2nd Characteristic Numeral

0	Not protected.
1	Protection against dripping water.
2	Protection against dripping water when tilted up to 15 degrees.
3	Protection against rain.
4	Protection against splashing water.
5	Protection against water jets.
6	Protection against heavy seas.
7	Protection against the effects of immersion.
8	Protection against submersion.

**NEMA Definitions Pertaining to Non-hazardous Locations —
NEMA Standard 250**

Type 1

Enclosures are intended for indoor use, primarily to provide a degree of protection against contact with the enclosed equipment.

Type 3

Enclosures are intended for outdoor use, primarily to provide a degree of protection against windblown dust, rain, sleet and external ice formation.

Type 3R

Enclosures are intended for outdoor use, primarily to provide a degree of protection against falling rain, sleet and external ice formation.

Type 4

Enclosures are intended for indoor or outdoor use, primarily to provide a degree of protection against windblown dust and rain, splashing water and hose-directed water.

Type 4X

Enclosures are intended for indoor or outdoor use, primarily to provide a degree of protection against corrosion, windblown dust and rain, splashing water and hose-directed water.

Type 6

Enclosures are intended for indoor or outdoor use, primarily to provide a degree of protection against the entry of water during occasional temporary submersion at a limited depth.

Type 6P

Enclosures are intended for indoor or outdoor use, primarily to provide a degree of protection against the entry of water during prolonged submersion at a limited depth.

Type 12

Enclosures are intended for indoor use, primarily to provide a degree of protection against dust, falling dirt, and dripping non-corrosive liquids.

Type 13

Enclosures are intended for indoor use, primarily to provide a degree of protection against dust, spraying of water, oil and non-corrosive coolant.

**NEC Definitions Pertaining to
Hazardous Locations —
Article 500**

E51 Limit Switch Type Proximity Switches are rated for use in the following locations:

**Class I Division 2, Groups A, B, C or D —
Indoor Use**

- For the definition of a Class I Division 2 location, see National Electrical Code Article 500-5, paragraph (b).
- For the definitions of Class I Group A, B, C, D Classifications, see the National Electrical Code Article 500-3, paragraph (a).

**Class II Division 2, Groups F or G —
Indoor Use**

- For the definition of a Class II Division 2 location, see National Electrical Code Article 500-6, paragraph (b).
- For the definitions of Class II Group F and G Classifications, see the National Electrical Code Article 500-3, paragraph (b).

Class III Division 2 — Indoor Use

- For the definition of a Class III Division 2 location, see National Electrical Code Article 500-7, paragraph (b).
- For the definitions of Class III Classifications, see the National Electrical Code Article 500-7.

**IEC, A Frame, Full Voltage
Non-reversing and Reversing Starters**

Product Description

Eaton's Cutler-Hammer® Intelligent Technologies (IT) Electro-Mechanical line of Contactors and Starters is the result of a substantial engineering, manufacturing and marketing effort involving extensive customer input, combined with new advances in solid-state technology. IT Electro-Mechanical products have greatly increased functionality, significantly reduced size and utilize the benefits of 24V DC control. The exclusive Pulse Width Modulation (PWM) control and digital microprocessor generate a minimized DC value which reduces energy to the contact block and provides the most compact system available.

Standards and Certifications

- Designed to meet or exceed UL, IEC and CSA
- UL Listed: UL File #E1491, Guide #NLDX — Open, UL 508
- CSA Certified: CSA File #156828, Class #3211 04 Open, C22.2 No. 14-95
- IEC: A – F Frames, IEC 60947-4-1, EN 60947-4-1
- 45 mm – 76 mm CSA Certified for Elevator Duty
- CE
- EMC IEC 61000-4
- KEMA

ISO 9002 Certification

When you turn to Eaton's Cutler-Hammer Products, you turn to quality. The International Standards Organization (ISO) has established a series of standards acknowledged by 91 industrialized nations to bring harmony to the international quest for quality. The ISO Certification process covers 20 quality system elements in design, production and installation that must conform to achieve registration. This commitment to quality will result in increased product reliability and total customer satisfaction.

Catalog Number Selection (Open Components)

Table 34-269. IT. Electro-Mechanical Catalog Numbering System

Note: When using the Catalog Numbering System for Eaton's Cutler-Hammer IT. Electro-Mechanical products, care should be exercised to assure that the Catalog Number for the Overload Relay aligns with the IT. Contact Block selected for type, frame size and ampacity, if purchased as separate components. **Example:** Select an **E05N_XR_3A** IT. Overload Relay for an IEC non-reversing application or an **E06N_XR_3A** for an IEC reversing application.

Examples:

- E02NCXCXNN — FVNR Coil Controller, 54 mm
- E04NB18X3N — Contact Block, 45 mm, 18 Amps
- E05NCXRL3A — Solid-State Non-reversing Overload Relay, 16 – 50 Amps
- E101B32J3A — FVNR B-Frame Starter, 32 Amps, with Solid-State Overload, 10 – 32 Amps
- E111F25X3N — FVNR F-Frame Contactor, 250 Amps
- E501D10K3A — FVR D-Frame Starter, 100 Amps, with Solid-State Overload, 14 – 45 Amps
- E511B18X3N — FVR B-Frame Contactor, 18 Amps

Product Description

The Cutler-Hammer® Intelligent Technologies (IT) Electro-Mechanical Contactor from Eaton's electrical business consists of an IT Electro-Mechanical Contact Block and IT Electro-Mechanical Coil Controller as a Full Voltage Non-reversing (FVNR) or Full Voltage Reversing (FVR) device. B-Frame (45 mm) to E-Frame (105 mm) Contact Blocks combined with Coil Controllers (factory or field assembled) are stand-alone Contactors. Only the A-Frame (27 mm) and F-Frame (140 mm) Contactors have internal factory assembled coil controllers.

Also available are the IT Manual and Combination Motor Controllers which combine a Manual Motor Protector, Wiring Connector Link and IT Contactor. See **Tab 38** for more information.

Application Description

When selecting an IEC Contactor, the user must consider the specific load, utilization category and required electrical life. Actual application life may vary depending on environmental conditions and duty cycle.

Features

- 115V AC – 600V AC, 1/4 – 350 hp/ 3/4 – 250 kW, 50/60 Hz
- 24V DC Coil Control — safe, reliable global standard
- Most compact DC operated contactors available — e.g., A-Frame 27 mm wide, 7-1/2 hp @ 12A, 460V
- Frame sizes (mm): 27, 45, 54, 76, 105, 140
- No laminations, shading coils or magnet noise
- -40 to 149°F (-40 to 65°C) operating temperature
- No seal in auxiliary contacts required — control wiring is not needed between the contactor and overload relay

- Unique Pulse Width Modulated (PWM) coil controller minimizes energy and coil power consumption
- Conformal coated PWM board (coil controller) for environmental toughness
- Microprocessor-based control
- 95% humidity non-condensing (99% consult factory)
- Easily accessible mounting feet for panel mounting
- High immunity to ESD, harmonics — minimal Total Harmonic Distortion
- Front and side mounted Auxiliary Contacts: 1NO, 1NC, 2NO, 2NC, 1NO/1NC and logic level
- Built-in logic to provide either 2- or 3-wire control, eliminating the need to provide and wire auxiliary contacts to seal in and interlock the contactor coils
- Easy field assembly of control wiring — plug and unplug lockable control connector
- DIN rail mounting, 6 – 100A (A – D Frames)
- Common accessories
- Long-life silver nickel (A – B Frames) and silver tin oxide (C – F Frames) contacts provide excellent conductivity and superior resistance to welding and arc erosion
- Environmentally friendly materials
- IP20 Finger Protection
- Low wattage coils and minimal heat dissipation

Reversing Contactors

- Includes Reversing Power Wiring and bus bars
- Mounting plates for B-Frame (45 mm) to E-Frame (105 mm)
- Exclusive internal electronic interlock for reversing
- Unique coil controller energizes both forward and reverse contactors — one control point for wiring

Product Selection

When Ordering

Select required contactor by amp rating, frame size, kW/hp, voltage and non-reversing or reversing.

Non-reversing Contactors

Note:

- An **E111** (45 – 105 mm) consists of an **E04N** (Contact Block) and an **E02N** (FVNR Coil Controller), factory assembled.
- An **E111** (27 and 140 mm) has an internal coil controller, factory assembled.

IEC A-Frame FVNR Contactor
Cat. No. **E111A12X3N**

IEC B-Frame FVNR Contactor
Cat. No. **E111B32X3N**

Contactors — Full Voltage, Non-reversing and Reversing

Reversing Contactors

Note:

- An **E511** (45 – 105 mm) consists of two **E04N** (Contact Blocks), an **E03N** (FVR Coil Controller), Mechanical Interlock, Fanning Strips and Mounting Plate, factory assembled.
- An **E511F** (140 mm) consists of two **E111F** (Contactors), Mechanical Interlock, Crossover Bus Bars and Wiring Harness, factory assembled.
- An **E511A** (27 mm) Contactor is factory assembled only.

① 24V DC coil voltage.

②

Frame Size

- A = 27 mm
- B = 45 mm
- C = 54 mm
- D = 76 mm
- E = 105 mm
- F = 140 mm

Note:

- If required, accessories are available starting on **Page 34-244**.
- Integral solid-state auxiliary hold-in circuit.
- 3 main contacts.
- See **Table 34-279** for 24V DC power supply requirements.
- Control inputs (P, F, R) are rated 24V DC (3 – 5 mA).

*IEC Full Voltage Reversing Starter, E Frame
Cat. No. E501E20R3A*

Product Description

The Cutler-Hammer® Intelligent Technologies (IT.) Electro-Mechanical Starter from Eaton's electrical business consists of an IT. Electro-Mechanical Contact Block or Contactor and IT. Electro-Mechanical Solid-State Overload Relay as a Full Voltage Non-reversing (FVNR) or Full Voltage Reversing (FVR) device. A-Frame (27 mm) to F-Frame (140 mm) Starters are factory or field assembled.

Features

- 115V AC – 600V AC, 1/4 – 350 hp / .75 – 250 kW, .25A – 420A Overload Amperes range, 50/60 Hz
- 24V DC coil control power — safe, reliable, global standard
- Unique Pulse Width Modulated (PWM) coil controller minimizes energy and coil power consumption
- Microprocessor based control
- Phase loss and current unbalance protection, user selectable
- Standard user-selectable Trip Class 10 (factory default), 20 or 30 — no individual part numbers — no programming software
- Ambient compensated
- Motor temperature and power-up protection with thermal memory
- Easily accessible mounting feet for panel mounting
- For use on the load side of an Adjustable Frequency Drive, consult the factory.

- LED status indication — trip, trip class, motor thermal state, reset, overload state
- Unique “Alarm without Trip” option for critical must run applications
- Lockable overload cover protects against unauthorized adjustment and reset functions
- No control wiring needed between contactor and overload relay — eliminates seal in auxiliary contacts
- Minimal heat — no full voltage coils
- -40° to 149°F (-40° to 65°C) operating temperature
- Wide 3.2:1 current adjustment range
- Exclusive internal 24-bit floating point math calculations with RMS calibrated current measurement
- High immunity to ESD, harmonics — minimal Total Harmonic Distortion
- IP20 Finger Protection
- Motor running thermal utilization indication
- Manual, Automatic or Remote Reset
- Easy field assembly of control wiring — plug and unplug lockable control connector
- DIN rail mounting, 6A – 100A (A – D Frames)
- Communication Interface with Starter Network Adapter Product (SNAP)
- 2- or 3-wire control
- Solid-state alarm output indication
- Front and side mounted Auxiliary Contacts: 1NO, 1NC, 2NO, 2NC, 1NO/1NC, logic level (1NO/1NC)
- Type 2 Coordination
- Conformal coated PWM overload board for environmental toughness

Reversing Starters

- Includes Reversing Power Wiring and bus bars
- Mounting plates for B-Frame (45 mm) to E-Frame (105 mm)
- Built-in electronic interlock for FVR units
- Unique overload board energizes both forward and reverse starters — one control point for wiring

*IEC FVNR Starter, C Frame
Cat. No. E101C50L3A*

① 24V DC coil voltage.

Note:

- If required, accessories are available starting on Page 34-244.
- A-Frame 27 mm *IT* Starter is for 1 – or 3-phase applications.
- The standard B – F-Frame (45 mm to 140 mm) *IT* Starters are for 3-phase applications.

- An **E501** (45 – 105 mm) consists of two **E04N** (Contact Blocks), an **E06N** (Reversing Overload Relay), Fanning Strips, Mechanical Interlock and Mounting Plate. An **E501F** (140 mm) consists of two **E111F** (Contactors), an **E06NF** (Reversing Overload Relay), Mechanical Interlock, Crossover Bus Bars and Reversing Wiring Harness.
- An **E501A** (27 mm) consists of an **E511A** (Contactor) and **E06NA** (Reversing Overload Relay).

■ See Table 34-279 for 24V DC power supply requirements.

■ Control inputs (P, F, R, 1) are rated 24V DC (3 – 5 mA).

Excl. Debounce Time	8	5	5	12	15	50 – 150
Incl. Debounce Time	60 ②	65	70	75	80	70 – 200 ②

① Consult factory for higher ratings.

② Add 50 mS for 27 and 140 mm Starters for additional microprocessor.

③ The Non-reversing Starter requires the use of all six mounting screws for the maximum rating.

Note: At other temperatures expressed in °C, for either inrush or sealed, use the 20°C value from the table in the following:

$$\text{Watts} = W20 [1.1 - .005(T) \text{ and } \text{Amps} = A20 [1.1 - .005(T)]$$

For example, inrush requirements for a

D-Frame Starter at -25°C would be:

$$\text{Watts} = 130 [1.1 - .005 (-25)] = 160$$

$$\text{Amps} = 5.4 [1.1 - .005 (-25)] = 6.6$$

Note:

■ Response time for Control Inputs = Debounce Time

■ The time between operating forward and reverse must be greater than the Debounce Time.

Table 34-279. 24V DC Power Supply Requirements @ 68°F (20°C) (see Note at bottom left) ④⑤

Contactor/Starter Size	Sealed In	Inrush		Duration (mS)		
		Wattage	Amps			
Catalog Number ⑥	Frame/mm	Wattage	Amps	Wattage	Amps	Duration (mS)
E_11A_X3N	A/27	1.3	.054	20	.83	30
E_01A_3A	A/27	2.0	.083	20	.83	30
E_11B_X3N	B/45	3.7	.15	80	3.3	50
E_01B_3A	B/45	3.2	.13	80	3.3	50
E_11C_X3N	C/54	4.2	.18	90	3.8	50
E_01C_3A	C/54	3.6	.15	90	3.8	50
E_1D_3_	D/76	5.0	.21	130	5.4	65
E_1E_3_	E/105	5.6	.23	140	5.8	85

E_01F_3A	F/140	13.0	.54	200	8.3	250

④ The sum of the sealed in values of the contactors/starters must be less than the power supply sealed in value. The largest contactor/starter inrush value must be less than the power supply inrush value.

⑤ Refer to Tab 44 for further power supply information.

⑥ _ indicates missing digit/character of the Catalog Number; may have multiple values.

Electrical Life — AC-1, AC-2, AC-3 and AC-4 Utilization Categories

Table 34-280. Utilization Categories

The International Electrotechnical Commission (IEC) has developed utilization categories for contactors and auxiliary contacts. The categories describe the type of electrical load and the conditions for making and breaking the current.

Category	Typical Application
AC-1	Non-inductive or slightly inductive loads: Resistance furnaces, heating.
AC-2	Slip-ring motors: Starting and stopping of running motors
AC-3	Squirrel cage motors: Starting, switching off motors during running (motors in most industrial applications typically fall into this category).
AC-4	Squirrel cage motors: Starting, plugging ①, inching ② (very few applications in industry are totally AC-4).

① Plugging is stopping or reversing the motor rapidly by reversing the connections while the motor is running.

② Inching or jogging is energizing the motor once or repeatedly for short durations to obtain small movements of the motor driven load.

Life Load Curves — Eaton's Cutler-Hammer IT. Electro-Mechanical Series IEC contactors have been designed and manufactured for superior life performance. All testing has been based on requirements as found in IEC 60947-4-1 and conducted by us. When selecting a contactor designed to IEC requirements, the specifier must give attention to the specific load, utilization category and the required electrical life. For a definition of Utilization Categories, see **Table 34-280** above.

Note: AC-3 tests are conducted at rated device currents and AC-4 tests are conducted at six-times rated device currents. All tests have been run at 460V, 60 Hz.

Actual application life may vary, depending on environmental conditions and application duty cycle.

Trip Times

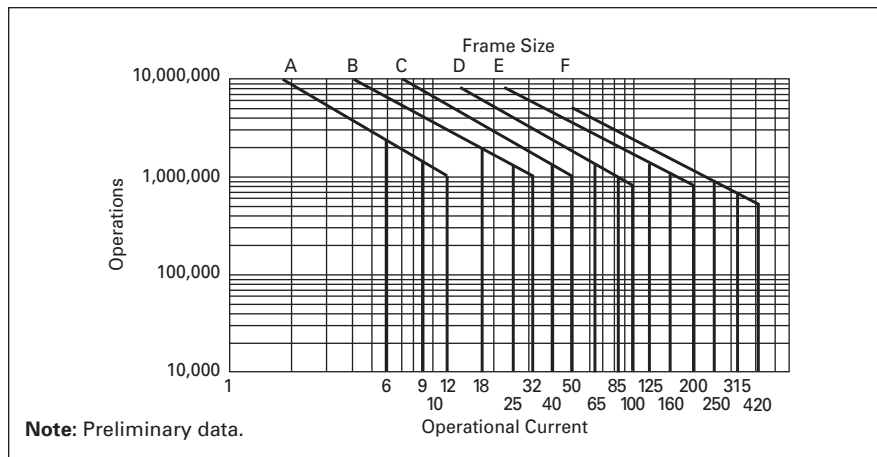

Figure 34-150. Class 10, 20 and 30 Trip Curves

Note: Preliminary data.

Figure 34-148. Electrical Life — AC-3 Utilization Category

Note: Preliminary data.

Figure 34-149. Electrical Life — AC-4 Utilization Category

Contactor Choice —

- Decide what utilization category the application is and choose the appropriate curve from **Figure 34-148** or **Figure 34-149**.
- Locate the intersection of the life-load curve with the operational current (I_e) of the application, as found on the horizontal axis.
- Read the estimated contact life along the vertical axis in number of operations.

Accessories

Auxiliary Contacts

Auxiliary Contacts are available for mounting on *IT*. Electro-Mechanical Contactors and Starters. The various choices available for non-reversing models are shown in **Tables 34-284 and 34-285**, and their ratings in **Tables 34-286 – 34-288**. For reversing models, the number of auxiliaries indicated is for each of the contactors/starters in the assembly.

Starter Network Adapter Product (SNAP)

Cat. No. D77B-DSNAP-X1 with 54 mm IT. Starter

The Starter Network Adapter Product (SNAP) is a front-mount device that serves as a single DeviceNet node, providing communication capability, control and monitoring to Eaton's Cutler-Hammer Intelligent Technologies (*IT*). Electro-mechanical Starters (B – F Frames) as well as the *IT*. S75X SoftStart.

When HAND-OFF-AUTO is required, the HOA option will allow for the connection of hard wired operators. This option allows for Hand Control even if the DSNAP is not connected.

For more information and pricing, see **Tab 50**.

*Mini Contactor with Screw Pressure Plate Terminals
Catalog Number CE12BNC310B*

*Mini Contactor Reversing Pair with Screw Pressure Plate Terminals
Catalog Number CE52CNC310H*

Product Description

Eaton offers a complete line of Cutler-Hammer® Miniature Control Products that includes mini contactors (mechanically interlocked and non-reversing), overload relays and snap-on accessories. A wide range of applications are possible, including small electrical motors fractional to 5 hp (480V AC). Because of its compact size, the line is best suited to be applied in light duty loads such as hoisting, packaging, material handling, heating, lighting and automation systems.

Features

Mini Contactors

- Available in three different terminal configurations:
 - Screw Pressure Plate
 - Quick Connect
 - Solder Pin
- Mechanically interlocked or non-reversing
- Panel or DIN rail mounting (35 mm)
- Fingerproof protection
- Low noise operation
- AC or DC operation possible

Overload Relays (Bimetallic Type — C312)

- 11 Settings — to cover .10 to 12.0 Amps
- Phase loss compensated
- Ambient temperature compensated
- Class 10 — Bimetallic type O.L.
- Stop and test buttons included
- 1NO-1NC auxiliary contacts included as standard

Accessories

- Side and front mounted auxiliary contacts
- Identification clips
- Surge suppressors
- Reversing connection links

Standards and Certifications

Meet or exceed the North American and International standards:

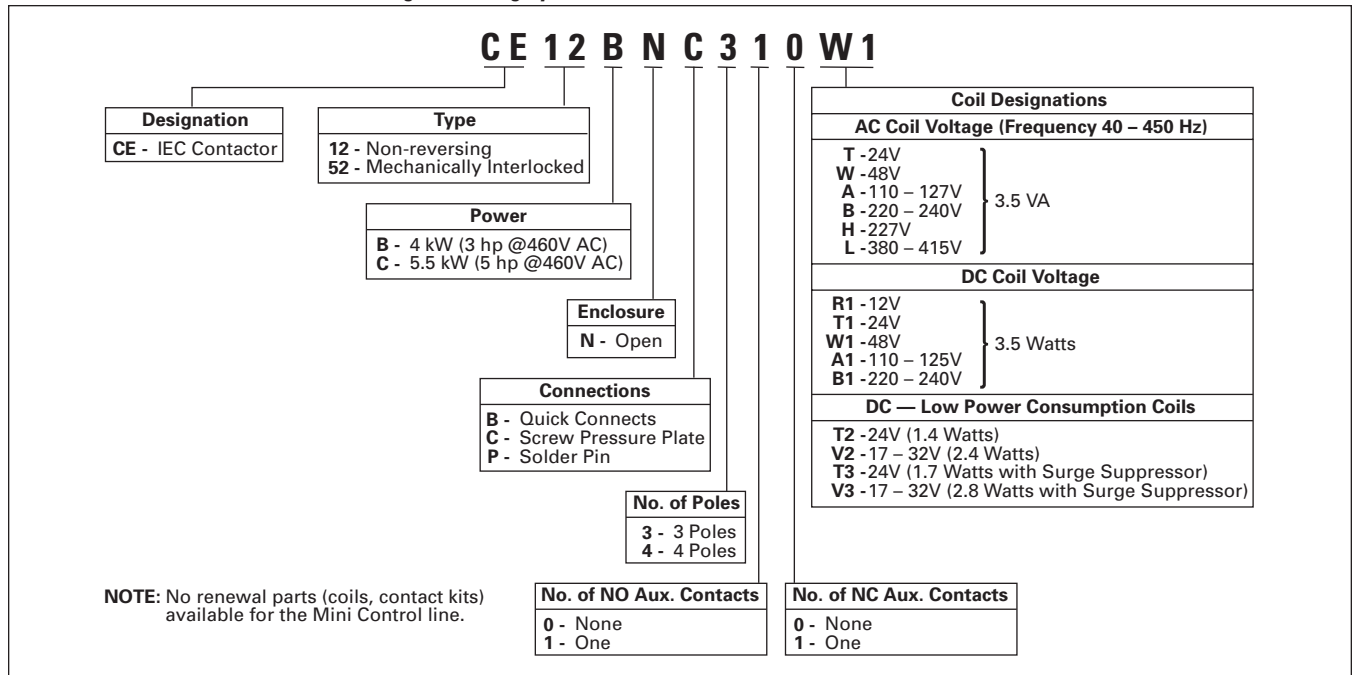

- UL
- CSA
 - **Mini Contactors and Surge Suppressors**
UL File No. E19224, Category NLDX and NLDX2; CSA File No. LR353, Class 3211-07
 - **Accessories**
UL File No. E19223, Category NKCR and NKCR2; CSA File No. LR353, Class 3211-07
 - **Overload Relays**
UL File No. E19223, Category NKCR and NKCR2; CSA File No. LR353, Class 3211-03
- IEC, VDE, CE and most other International standards

17 – 32 (2.4 Watts)	V2
24 (1.7 Watts with Surge Suppressor)	T3
17 – 32 (2.8 Watts with Surge Suppressor)	V3

④ Auxiliary contacts can not be used with Low Power Consumption DC Coils Suffix designations: T2, V2, T3 and V3.

Table 34-317. Price Adder for Low Wattage DC Coils

Devices	Suffix Designations	Adder U.S. \$
4 kW	T2 & V2 T3 & V3	
5 kW	T2 & V2 T3 & V3	

Auxiliary Contacts Front and Side Mounted

A total of six auxiliary contacts are available to be used with the mini control line.

Front mounted auxiliary contacts are available in three contact configurations (1NO-1NC, 2NO and 2NC) and can be screw mounted to non-reversing and reversing contactors with screw pressure plate terminals only.

Side mounted auxiliary contacts are available for the miniature control product line in three terminal versions: screw pressure plate, quick connect and solder pin. The side mounted auxiliary is mounted to the left side of non-reversing contactors without tools. Only one side mounted auxiliary can be mounted on these products.

Table 34-318. Front Mount Auxiliary Contacts for Screw Pressure Plate Terminals — Only Mini Contactor and Control Relay

Add-On Auxiliary Contacts Configuration	Catalog Number	Price U.S. \$
1NO-1NC	C320MCF11	
2NO	C320MCF20	
2NC	C320MCF02	

Table 34-319. Side Mount Auxiliary Contacts for Screw Pressure Plate, Quick Connect, Solder Pin Terminals and Control Relays

Terminal Type Contactor/Control Relay	Add-On Auxiliary Contacts Configuration	Catalog Number	Price U.S. \$
Screw Pressure Plate	1NO-1NC	C320MCS11	
Quick Connect	1NO-1NC	C320MBS11	
Solder Pin	1NO-1NC	C320MPS11	

Application Notes

- Side mounted auxiliary contacts can not be used simultaneously with front mounted auxiliary contacts.
- Auxiliary contacts can not be used with low power DC Coil Suffix designations **T2, T3, V2** or **V3**.
- Side mounted auxiliary contacts can not be used with mechanically interlocked contactors.
- Auxiliary contacts used with devices having screw pressure plate terminals are UL Listed and side mounted auxiliary contacts used with devices having quick connect or solder pin terminals are UL Recognized.

Overload Relays

Product Description

Eaton's electrical business has been supplying quality Industrial Control products for more than 100 years — the Cutler-Hammer® Freedom Series line of Contactors and Starters continue in this tradition. The IEC Freedom Series Contactors and Starters feature a compact space-saving design, using state-of-the-art technology and the latest in high strength, impact and temperature resistant insulating materials.

Eaton is the only manufacturer to offer IEC Starters with two different overload options: Fixed Bimetallic Overload and Interchangeable Heater Overload with Heater Packs. Contactors and Overloads can also be ordered separately or as completely assembled starters with either overload relay option.

Features

Freedom IEC Features

Freedom IEC contactors and starters are designed to IEC standards and comply with the International Standard IEC 947-4-1. IEC products are a perfect choice when electrical and mechanical application parameters are known. They are typically smaller in size and provide higher ratings in a smaller package. They are available in 22 sizes to match the contactor to the application.

- Complies with IEC 947-4-1, EN, CENELEC, UL and CSA standards.
- 22 Sizes of contactors through 900 hp.
- DIN rail mountable through 20 hp.
- Adjustable bimetal overload relays — fixed or interchangeable heater.
- Available in Open and NEMA 1, 3R, 4/4X and 12 enclosures.

Standards and Certifications

- Standard: Designed to meet or exceed UL, NEMA, IEC, CSA, VDE and BS
- UL Listed: UL File #E1491, Guide #NLDX — Open
- CSA Certified: CSA File #LR353, Class #321104 Open
- IEC: Sizes A – S, IEC 947-4-1; Sizes T – Z, IEC 158 (IEC 947 Pending)

Certified Type 2 Coordination

Eaton's Cutler-Hammer Freedom Series IEC starters are now UL Certified to achieve IEC 947 Type 2 coordination against 100,000A short circuit fault currents. Any brand of properly selected fuse can be used. Type 2 coordination means that the starter will be suitable for further use following a short circuit fault.

Product Description

Non-reversing

Contactors are most commonly used to switch motor loads in applications where running over current protection is either not required or is provided separately. Contactors consist of a magnetically actuated switch which can be remotely operated by a push-button station or pilot device such as a proximity switch, limit switch, float switch, auxiliary contacts, etc.

Reversing

Reversing contactors are used primarily for reversing single- or three-phase motors in applications where running over current protection is either not required or is provided separately. They consist of two contactors mechanically and electrically interlocked to prevent line shorts and energization of both contactors simultaneously.

Features

- **EN60947-4-1 IEC 947-4-1 Compliance** — new International Standard for low voltage switchgear and control devices.
- Long life twin break, silver cadmium oxide contacts — provide excellent conductivity and superior resistance to welding and arc erosion.
- Designed to 2,000,000 electrical and 20,000,000 mechanical operations at maximum hp ratings through 20 hp at 460V. Adequate for most general duty control applications.

Non-reversing

- UL listed and CSA certified.
- Highest horsepower rating in a compact, space-saving design, 45 mm frame rated maximum 20 hp at 460V, 65 mm frame rated maximum 50 hp, 90 mm frame rated 100 hp, 180 mm frame rated 200 hp, 220 mm frame rated 350 hp, 280 mm frame rated 600 hp, and 334 mm frame rated 900 hp.
- 45 mm open contactors, Sizes A – F, have DIN rail or universal base mounting, 65 mm open contactors have molded feet for panel mounting, and 90 mm to 334 mm have steel mounting plates (optional on smaller sizes).
- DIN rail release mechanism conveniently located on line side of contactor.

- IP20 finger protection shields available.
- Contactor and terminal markings conform to CENELEC EN50011.
- Holding circuit contact(s) supplied as standard:
 - Sizes A – N have a NO auxiliary contact block mounted on right hand side (on Sizes A – C, contact occupies 4th power pole position — no increase in width).
 - Sizes P – S have a NO-NC contact block mounted on the left hand side.
 - Sizes T – Z have a 2NO-2NC contact block mounted on the top left between arc chutes.
- Lugs supplied standard on Sizes A – S. On Sizes T – Z, lugs must be ordered separately.

Reversing

- Highest horsepower rating in a compact, space-saving design, 45 mm frame rated maximum 20 hp, 65 mm frame rated maximum 50 hp and 90 mm frame rated maximum 75 hp at 460V. If larger devices are required, order components.
- 45 mm open type reversing contactors, Sizes A – F, have DIN rail or panel mounting capability. DIN rail release mechanism conveniently located on line side of contactor. A steel mounting plate is optional.
- 65 mm reversing contactors, Sizes G – K and 90 mm Sizes L – N are supplied with steel mounting plate as standard.
- Sizes A – K have a wired NC top mounted electrical interlock on each contactor. Sizes L – N have one NO-NC side mounted electrical interlock on each contactor.

**Product Selection —
3-Pole Contactors**

When Ordering Specify

- Select required contactor by Catalog Number and replace the magnet coil alpha designation in the Catalog Number () with the proper Code Suffix from **Tables 34-324 and 34-326**, on **Page 34-265**.
- For Sizes A – K, the magnet coil alpha designation is the second-to-last digit of the Catalog Number. Example: for a 240V/60 Hz coil, order CE15ANS3BB.

- ① IEC Sizes A – N are supplied with a NO auxiliary contact. On IEC Sizes A – C, the 4th power pole position is used as the auxiliary contact and adds no additional width. Open type Sizes A – K can be ordered with a top mounted auxiliary contact instead of a side mounted contact. To order, change the 7th digit of the listed Catalog Number from “S” to “T”. Example: CE15ANT3AB. On open type Sizes A – K, if the NO auxiliary contact is not required, drop the “S” from the listed Catalog Number.
- ② Auxiliary contacts: Sizes P – S have 1NO-1NC, Sizes T – X have 2NO-2NC, Size Z has 2NO-1NC. Sizes T – Z are supplied without lugs — order appropriate lug kits from **Table 34-325** on **Page 34-265**.
- ③ Sizes A – K IEC contactors do not include holding circuit contacts. For factory installed NO auxiliary contacts, insert “S” (side mounted) or “T” (top mounted) after 6th digit of listed Catalog Number. Example: Change CE55AN3AB to CE55ANS3AB. For “T”, top mounted NC contact blocks are replaced with NO-NC blocks — for “S”, they are replaced with NO-NC side mounted blocks.

Product Selection — 2-, 4- and 5-Pole Contactors

**IEC Size G
4-Pole Contactor
Cat. No. CE15GN4AB**

When Ordering Specify

- Select required contactor by Catalog Number and replace the magnet coil alpha designation in the Catalog Number () with the proper Code Suffix from the adjacent table.
- For Sizes A – K, the magnet coil alpha designation is the second-to-last digit of the Catalog Number. Example: for a 240V/60 Hz coil, order CE15ANS3BB.
- For **DC Magnet Coils**, see Accessories, **Page 34-279**.

Product Description

Non-reversing

Eaton's Cutler-Hammer® Fixed Heater Starters utilize a Class 10 Bimetallic Overload Relay and are available for 3-phase motor applications from fractional horsepower motors up to 900 hp at 480V.

Features

- **EN60947-4-1 IEC 947-1 Compliance** — new International Standard for low voltage switchgear and control devices.
- UL listed and CSA certified.
- C316 Bimetallic Ambient Compensated Overload Relays — available in three basic sizes covering applications up to 200 hp (150 hp Reversing) — reducing number of different contactor/overload relay combinations that have to be stocked.
- These overload relays feature:
 - Direct heated bimetal elements — Class 10.
 - Single-phase and phase unbalance sensitivity.
 - Ambient temperature compensated.
 - Adjustable trip current.
 - Overload trip indication.
 - Contact test lever.
 - Manual/automatic reset.
 - Electrically isolated NO-NC contacts.
- Long life twin break, silver cadmium oxide contacts — provide excellent conductivity and superior resistance to welding and arc erosion.
- Designed to 2,000,000 electrical operations and 20,000,000 mechanical operations through 20 hp at 460V. Adequate for most general duty motor control applications.

Reversing

Three-phase, full voltage magnetic starters are used primarily for reversing of 3-phase squirrel cage motors. They consist of two contactors and a single overload relay assembled together. The contactors are mechanically and electrically interlocked to prevent line shorts and energization of both contactors simultaneously.

Non-reversing

- Highest horsepower rating in compact, space-saving designs. 45 mm frame rated maximum 20 hp at 460V, 65 mm frame rated maximum 50 hp, 90 mm frame rated maximum 100 hp and 180 mm frame rated maximum 200 hp.
- NO side mounted auxiliary contact supplied as standard on Sizes A – N. Sizes P, R and S have NO-NC.
- 45 mm open type starters, Sizes A – F, have DIN rail or universal base mounting. A steel mounting plate is optional. Sizes G – S supplied with steel mounting plate as standard.
- Four basic starter frame widths — 45 mm, 65 mm, 90 mm and 180 mm — simplifying panel layout.
- 45 mm DIN rail release mechanism conveniently located on line side of starter.

Reversing

- Highest horsepower rating in compact, space-saving designs. 45 mm frame rated maximum 20 hp at 460V, 65 mm frame rated maximum 50 hp at 460V, and 90 mm frame rated a maximum 100 hp at 460V.
- 65 mm reversing starters, Sizes G – K and 90 mm reversing starters Sizes L – N are supplied with steel mounting plate as standard.
- Sizes A – K have a wired NC top mounted electrical interlock on each contactor. Sizes L – N have one NO-NC side mounted electrical interlock on each contactor.

Product Selection

When Ordering Specify

- Select required starter by Catalog Number and replace the magnet coil alpha designation in the Catalog Number () with the proper Suffixes from the tables on **Page 34-268**. First, select the Magnet Coil Suffix and then add the two digit Overload Relay Suffix code.
- Example: for a Size A starter for 120V/60 Hz and full load current is 2.0A, order AE17ANS0AFH.
- For **DC Magnet Coils**, see Accessories, **Page 34-279**.

① Underscore () indicates Magnet Coil Suffix and Overload Relay Suffix code.
 ② IEC Sizes A – K are supplied with a NO auxiliary contact. On IEC Sizes A – C, the 4th power pole position is used as the auxiliary contact and adds no additional width. Open type sizes A – K can be ordered with a top mounted auxiliary contact instead of a side mounted contact. To order, change the 7th digit of the listed Catalog Number from “S” to “T”. Example: AE17ANT0AFC. On open type sizes A – K, if the NO auxiliary contact is not required, drop the “S” from the listed Catalog Number. Example: AE17AN0AFC. IEC Sizes L – N open are supplied with a NO side mounted auxiliary contact. On IEC Sizes P – S, a NO-NC side mounted is standard. Sizes T – X have 2NO-2NC, Size Z has 2NO-1NC.
 ③ Starters include fixed heater overload relay. AE17 is only an ordering number. Assembled starter consists of individually marked CE15 contactor and C316 overload relay.
 ④ Sizes A – K IEC starters do not include holding circuit contacts. For factory installed NO auxiliary contacts, insert “S” (side mounted) or “T” (top mounted) after 6th digit of listed Catalog Number. Example: Change AE57AN0AFC to AE57ANS0AFC. For “T”, top mounted NC contact blocks are replaced with NO-NC blocks — for “S”, they are replaced with NO-NC side mounted blocks.

Features

- **EN60947-4-1 IEC 947-4-1 Compliance** — the International Standard for low voltage switchgear and control devices.
- Direct heated bimetal elements.
- Class 10 trip characteristics through 200 amperes and Class 30 on 400 and 850 ampere relays.
- Single-phase and phase unbalance sensitive.

- Ambient temperature compensated.
- Adjustable trip current, overload trip indication.
- NO-NC electrically isolated contacts, contact test lever.
- Manual/automatic reset.
- DIN rail and panel mounting adapter.

Standards and Certifications

- UL listed — File E130332
- CSA certified — File LR15332M94

Table 34-331. Overload Configurations — C316 Overload

Size		Mounting Arrangements
Overload	Contactor	
F	A – F	Connecting links are provided for close coupling. For independent mounting, an accessory kit C306TB1 is required.
K	G – K	Connecting links are provided for close coupling. For independent mounting, an accessory kit C316TB1 is required which replaces the connectors and repositions the calibration marks with an additional label.
P	L – N	Connecting links are provided for close coupling with a calibration label to reposition the marks.

IEC Size D
Cat. No. AE16DN0BC

Product Description

Non-reversing

IEC Freedom Series Starters utilize an Interchangeable Heater Pack Overload Relay which allows increased flexibility. Starters are available to cover 3-phase motors with fractional horsepower ratings up to 900 hp at 480V.

Reversing

Three-phase, full voltage magnetic starters are used primarily for reversing of 3-phase squirrel cage motors. They consist of two contactors and a single overload relay assembled together. The contactors are mechanically and electrically interlocked to prevent line shorts and energization of both contactors simultaneously.

Features

- **EN60947-4-1 IEC 947-4-1 Compliance** — International Standard for low voltage switchgear and control devices.
- UL listed and CSA certified.
- **Bimetallic Ambient Compensated Overload Relays** — available in three basic sizes covering applications up to 200 hp (100 hp Reversing) — reducing number of different contactor/overload relay combinations that have to be stocked. These overload relays feature:
 - Selectable Manual or Automatic Reset operation.
 - Interchangeable Heater Packs adjustable $\pm 24\%$ to match motor FLA and calibrated for 1.0 and 1.15 service factors. Heater packs for smaller overload relay will mount in larger overload relay — useful in derating applications such as jogging.
 - Meets UL508 Single-Phasing requirements, Class 20 or Class 10 trip time.
 - Overload trip indication.
 - Electrically isolated NO-NC contacts (pull RESET button to test).
- Long life twin break, silver cadmium oxide contacts — provide excellent conductivity and superior resistance to welding and arc erosion.
- Designed to 2,000,000 electrical and 20,000,000 mechanical operations through 20 hp at 460V. Adequate for most general duty motor control applications.

Non-reversing

- Highest horsepower rating in compact, space-saving designs, 45 mm frame rated maximum 20 hp at 460V, 65 mm frame rated maximum 50 hp, 90 mm frame rated maximum 100 hp, and 180 mm rated maximum 200 hp.
- IP20 finger protection shields available.
- Contactor and terminal markings conform to CENELEC EN50011.

- One NO right-side mounted auxiliary contact supplied as standard on Sizes A – N (on Sizes A – C, contact occupies 4th power pole — no increase in width). Sizes P – S have NO-NC.
- 45 mm open type starters, sizes A – F, have DIN rail or universal base mounting. DIN rail release mechanism conveniently located on line side of starter. A steel mounting plate is optional.
- 65 mm starters, sizes G – K; 90 mm starters, sizes L – N; and P – S 180 mm supplied with steel mounting plate as standard.
- Four basic starter frame widths — 45 mm, 65 mm, 90 mm and 180 mm — simplifying panel layout.

Reversing

- Highest horsepower rating in compact, space-saving designs. 45 mm frame rated maximum 20 hp at 460V, 65 mm frame rated maximum 50 hp, and 90 mm frame rated maximum 100 hp.
- 45 mm open type reversing starters, Sizes A – F, have DIN rail or universal base mounting. DIN rail release mechanisms conveniently located on line side of starters. A steel mounting plate is optional.
- 65 mm reversing starters, Sizes G – K, and 90 mm reversing starters, Sizes L – N, are supplied with steel mounting plate as standard.
- Sizes A – K have a wired NC top mounted electrical interlock on each contactor. Sizes L – N have one NO-NC side mounted electrical interlock on each contactor.
- A full time of snap-on accessories — top and side mounted auxiliary contacts, solid-state and pneumatic timers, etc.
- Straight-through wiring — line lugs at top, load lugs at bottom.
- Horizontal or vertical mounting on upright panel for application freedom.
- Screw type power terminals have captive, backed-out self-lifting pressure plates with \pm screws — reducing wiring time.

Product Selection

When Ordering Specify

- Select required starter by Catalog Number and replace the magnet coil alpha designation in the Catalog Number () with the proper Code Suffix from **Table 34-338** on **Page 34-272**.

- Example: for a Size B starter with a 480V/60 Hz coil, order AE16BNS0CC.
- For **DC Magnet Coils**, see Accessories, **Page 34-279**.

① IEC Sizes A – N, open are supplied with a NO auxiliary contact. On IEC Sizes A – C, the 4th power pole position is used as the auxiliary contact and adds no additional width. Open type Sizes A – K can be ordered with a top mounted auxiliary contact instead of a side mounted contact. To order, change the 7th digit of the listed Catalog Number from “S” to “T”. Example: AE16ANT0AC. On open type Sizes A – K, if the NO auxiliary contact is not required, drop the “S” from the listed Catalog Number. Example: AE16AN0AC. On IEC Sizes P – S, a NO-NC side mounted is standard. Sizes T – X have 2NO-2NC, Size Z has 2NO-1NC.

Starters — Interchangeable Heater

When Ordering Specify

- Select required starter by Catalog Number and replace the magnet coil alpha designation in the Catalog Number () with the proper Code Suffix from **Table 34-338** below.
- Example: for a Size B starter with a 480V/60 Hz coil, order AE16BNS0CC.
- For **DC Magnet Coils**, see Accessories, **Page 34-279**.

32 Ampere Overload
Cat. No. C306DN3B

Product Description

C306 Overload Relays are designed for use with CE or CN non-reversing and reversing contactors. Four sizes are available for overload protection up to 144 amperes.

Features

- Selectable manual or automatic reset operation.
- Interchangeable heater packs adjustable $\pm 24\%$ to match motor FLA and calibrated for use with 1.0 and 1.15 service factor motors.
 - Heater packs for 32 ampere overload relay will mount in 75 ampere overload relay — useful in derating applications such as jogging.
- Class 10 or 20 heater packs.
- Load lugs built into relay base.
- Bimetallic, ambient compensated operated. Trip free mechanism.
- Electrically isolated NO-NC contacts (pull RESET button to test).
- Overload trip indication.
- Shrouded or “fingerproof” terminals to reduce possibility of electrical shock.
- Meets UL508 single-phasing requirements.

Overload Lug Adapter Kit

**Cat. No. C306KAL1-3
Overload Relay Lug
Adapter Kit**

These kits are used in conjunction with Catalog Numbers H2001B – H2014B or H2101B – H2114B heater packs as a means of utilizing these Series “B” heater packs in Catalog Numbers C306DN3 and C306GN3 Series “A1” overload relays. The kit consists of 3 lug adapters and installation

instructions. When installing Series “B” heater packs plus lug adapters in Series “A” overload relays, refer to heater pack FLA adjustment tables originally supplied with equipment (also supplied with kit).

Table 34-342. Product Selection

Description	Catalog Number	Price U.S. \$
Series “A1” Overload Relay Lug Adapter Kit	C306KAL1-3B	

Replacement Parts

Heater Pack Replacement

The heater pack series is determined by the 6th character of the Catalog Number. Series A or prior heater packs (identified by either “A” or “-” as the 6th character) have built-in load lugs. Series B or later heater packs do not (load lugs are on overload relay). Replacement of Series A or earlier heater packs with Series B or later heater packs, requires the one time addition of Lug Adapter Kit C306KAL1-3B to the Series A1 overload relay.

Overload Relay Replacement — Series “A” Only

When replacing a Catalog Number C306DN3 (Part Number 10-6044) or C306GN3 (10-6319) Series “A” overload relay on a starter, order a Series “B” overload relay and Series “B” heater packs.

**Superseded 32 Ampere
Series “A” Overload Relay
Cat. No. C306DN3**

**Superseded 75 Ampere
Series “A” Overload Relay
Cat. No. C306GN3**

Product Selection

32A Overload
Cat. No. C306DN3B

75A Overload
Cat. No. C306GN3B

Table 34-345. C306 Thermal Overload Relays

For Use with Freedom Series Contactors		Maximum Ampere Rating	Number of Poles	Open Type		Open Type with Adapter for DIN Rail or Panel Mount		NEMA 1 Enclosed

5 – 8 ①	—	—	—	—		—		—	

- ① NEMA Sizes 5 – 8 use the 32 ampere overload in conjunction with CTs.
- ② Series “B” overload relays have load lugs built into relay base and will only accept Series “B” heater packs. These relays can be directly attached to contactor or they can be DIN rail mounted using adapter on **Page 34-273**.
- ③ These relays can be panel mounted only.

Heater Pack Selection

Heater Pack
H2001B – H2017B

Heater Pack
H2101B – H2117B

Heater Pack
H2018 – H2024

Heater packs H2001B to H2017B and H2101B to H2117B are to be used only with Series B overload relays Catalog Numbers C306DN3B (Part No. 10-7016) and C306GN3B (Part No. 10-7020). The load lugs are built into the overload relay base to allow load wiring prior to heater pack installation. The previous heater design had integral load lugs. The Series B heater packs are electrically equivalent to the previous heater design. Heaters H2018-3 to H2024-3 have not changed.

Table 34-346. Starters with Series B Overload Relays

NEMA — AN Type		IEC — AE Type	
Size	Series	Size	Series

② Sizes 5 – 8 and IEC P – Z use the 32A overload relay with current transformers.

Note: Heater packs are shipped 3 to a carton. Catalog Numbers are for 3 heater packs.

Auxiliary Contacts

NEMA Sizes 00 – 2 — IEC Sizes A – K

The auxiliary contacts listed below are designed for installation on Freedom Series starters and contactors. Snap-on design facilitates quick, easy installation.

These bifurcated design contact blocks, featuring silver cadmium alloy contacts, are well suited for use in very low energy (logic level) circuits.

DC Magnet Coils

When Ordering Specify

Conversion Kit for Field Assembly

- Catalog Number

Factory Installed DC Coil

- For factory installed DC magnet coil on AC contactors or non-combination starters (open type only), substitute the Code Suffix from table below for the magnet coil identifier in the device Catalog Number.

EXAMPLE: For Size 0 AC contactor with a 24V DC coil, change CN15BN3AC to CN15BN3T1C.

Application

- Connect for separate control
- Not for use with cover control switch operators
- Use twin break, heavy-duty pilot devices
- Designed for +10%, -20% rated voltage, continuous duty operation

Non-reversing Kit Consists of:

- 1 Encapsulated DC magnet coil
- 1 NCI or NO/NCI side mounted auxiliary contact

Note: These kits are supplied with a NO/NCI side mounted auxiliary contact in place of the NCI contact.

- 2 Blue colored connection wires
- 1 Instruction publication

Operation

These DC coil kits have separate pick-up and seal windings. A **special** (side mounted) early-break NCI auxiliary contact is used to either disconnect the pick-up winding or insert the seal winding in series with the pick-up winding, depending on the frame size of the contactor. DC coil kits come in two styles, a suffix **1** and a suffix **4**. The **1** suffix contains only the **special** (side mounted) early break NCI auxiliary contact. The **4** suffix contains a NO contact in the same package as the **special** (side mounted) early-break NCI auxiliary contact.

Note: For NEMA Sizes 00 and 0 and IEC Sizes A – F, contactors may utilize either suffix 1 or 4 DC coil kits; starters may utilize suffix 4 DC coil kits only. For NEMA Sizes 1 and 2 and IEC Sizes G – K, both contactors and starters may utilize a suffix 4 DC coil kit only.

On the above sizes only, when the **special** auxiliary package is mounted on the side of a contactor or starter, **no** standard auxiliary contact may be mounted on the same side.

Note: For NEMA Sizes 3 – 5 and IEC Sizes L – S, the special coil NCI clearing contact is an add-on auxiliary (**must** mount on a base mount auxiliary contact; normally a 1NO). This arrangement will normally account for two of the three contact positions on the side of each contactor or starter.

① These kits are supplied with a NO/NCI side mounted auxiliary contact in place of the NCI contact.
 ② Kit does not include mechanical interlock or crossover wiring. Two NO/NCI top mounted auxiliary contacts are supplied for electrical interlocking.
 ③ Factory installed DC coils on NEMA contactors and starters include a NO/NC top mounted auxiliary contact on each contactor for electrical interlocking. On IEC contactors and starters, a NC top mounted auxiliary contact is supplied on each contactor for electrical interlocking.
 ④ Available factory assembled only.
 ⑤ Two required per reversing assembly.

Accessories

Remote Reset Module
(32A Overload Relay)

The C316RR remote reset module for the C316F, C316S and C316U overload relays allows remote resetting of tripped (32A) overload relays by means of an electrical solenoid attachment which mounts on the side of the overload relay.

Mechanical Interlock and Reversing Kits

Mechanical interlocks and reversing kits are designed for field assembly of reversing contactors or starters from Freedom Series components. The Reversing Kits include a Mechanical Interlock, stabilizer bar and a pre-cut, trimmed and formed wire set. Auxiliary contacts, if required, must be ordered separately. See **Page 34-277**.

Solid-State Timers

Solid-State ON DELAY Timer — Side Mounted on Freedom Series NEMA 00 - 2, IEC A - K and C25D, C25E and C25F Frame

This timer is designed to be **wired in SERIES with the load** (typically a coil). When the START button is pushed (power applied to timer), the ON DELAY timing function starts. At the completion of the set timing period, timer and series wired load will both be energized.

Table 34-360. Product Selection — Mounted Timer

Timing Range	Catalog Number ④⑤⑥	Price U.S. \$

30 - 300 Seconds		
5 - 30 Minutes		

④ Add operating voltage Suffix to Catalog Number. **A** = 120V, **B** = 240V, **E** = 208V

⑤ Rated .5 ampere pilot duty - not to be used on larger contactors.

⑥ Terminal connections are quick connects only. Two per side.

Shorting Bar Kits

These kits provide phase-to-phase power connections of contactors for field assembly. The kits include bus connections and mounting hardware. The shorting bars connect all three phases of a single contactor.

Control Circuit Fuse Block

These panel mounted fuse holders, designed for control circuit protection or other similar low current requirements, have extractor type fuse caps. The Class CC rejection type fuses (KTK-R) used in these holders are intended for use with equipment designated as being suitable for use on systems having high available fault currents. If branch circuit protective device is 45A or greater, C320FBR fuse kit may be required for control circuit protection per NEC 430-72.

Transient Suppressor Kits

NEMA Sizes 00 – 2, IEC Sizes A – K

Cat. No. C320TS2

These kits limit high voltage transients produced in the control circuit when power is removed from the contactor or starter coil. There are three separate suppressors for use on 24 – 120V, 208 – 240V or 277 – 480V coils respectively.

These devices mount directly to the coil terminals of Freedom Series contactors or starters NEMA Sizes 00 – 2, IEC Sizes A – K and lighting contactors 10 – 60A. Reversing devices will require two.

Table 34-369. Product Selection

Description	Coil Voltage 50/60 Hz ③	Catalog Number	Price U.S. \$
Transient Suppressor	24 – 120V 208 – 240V 277 – 480V	C320TS1 C320TS2 C320TS3	

③ Suppressor is compatible with coil voltages/ranges as shown, 50 and 60 Hz.

NEMA Sizes 3 – 5, IEC Sizes L – S

This device mounts on top of any side mounted auxiliary contact on Freedom Series NEMA Sizes 3 – 5, IEC Sizes L – S and lighting contactors 100 – 300A. It connects across coil terminals on any 120V contactor or starter magnet coil (reversing starters or contactors require 2).

Limits high voltage transients produced in the circuit when power is removed from the coil.

Table 34-370. Product Selection

Description	Coil Voltage	Catalog Number	Price U.S. \$
Transient Suppressor	120V	C320AS1	

DC/AC Interface Module

**Cat. No.
C320DC**

The Catalog Number C320DC Interface Module is an optically isolated solid-state switch which provides a means of operating AC coils with a 5 – 48V DC control signal. It acts as a space saving interposing relay which

can switch a specified 50/60 Hz AC source to the contactor or starter coil.

The module may be directly attached to the coil terminals of any Freedom Series contactor or starter — NEMA Sizes 00 – 3, IEC Sizes A – N and lighting contactors 10 – 100A. It also has provisions for DIN rail mounting.

The module will operate coils within the voltage ranges shown below.

Design Characteristics

- DC Input: 5 – 48V DC ±10% at mA nominal
- AC Operating Voltage: 240V AC max. (360 VA) ±10% 50/60 Hz
- DC Operating Voltage: 30V DC max. (5A)
- AC Current Rating:
 - 10A make (inrush)
 - 1A break (sealed)

Product Description

The Cutler-Hammer® A302 from Eaton's electrical business is a three-phase Manual Motor Protector with an adjustable bimetallic Class 10 thermal overload and instantaneous magnetic short circuit trip mechanism. These MMPs can be used in single-phase or three-phase MMP applications. A302 MMPs are UL listed and CSA certified for group installations of motors and single motor installations up to 25 FLA. These MMPs can be field wired for single-phase motor applications by connecting the three poles in series.

Features

- Compact 45 mm design — saves panel space
- Meets UL, CSA and international standards
- CE Mark
- Class 10 bimetallic thermal overload trip
- Single-phase fault sensitivity
- Snap-on DIN rail mount capability or can be panel mounted with screws
- Open MMPs can be padlocked in OFF (STOP) position
- Terminals are "fingerproof," located in the vertical plane, easily accessible from the front with screwdriver guide holes provided for ease of wiring
- Wide range of accessories, including auxiliary contacts, undervoltage release module and shunt trip can be added to the MMP without tools

Standards and Certifications

- UL File No. E37316, Category NLRV
- CSA File No. LR12530-67M, Class 3211-05
- IEC 947-1, IEC 947-2, IEC-947-4

Product Selection

When ordering, specify Catalog Numbers according to the following stipulations:

A302 MMPs are selected based on the overload current range required for a given motor. This current range is determined from the motor Full Load Ampere rating and Motor Service Factor usually found on the motor nameplate.

For motors with service factors less than 1.15, multiply the motor FLA by .9 to select appropriate A302 MMP. Example: For motor having FLA of 6.4A and service factor of 1.0 (6.4A x .9 = 5.76A) select Catalog Number **A302JN**.

For motor with service factor of 1.15 or greater, use motor nameplate Full Load Amperes to select the appropriate MMP. Example: For motor having FLA of 6.4A and service factor of 1.15, select Catalog Number **A302KN**.

A307, A308 and A309
Manual Motor Protectors

Product Description

The Cutler-Hammer® A307, A308 and A309 family of Manual Motor Protectors (MMPs) from Eaton's electrical business feature a rotary ON/OFF manual disconnect, Class 10 adjustable bimetallic overload relay and fixed magnetic short circuit trip capability in one compact unit. Three frame sizes are available: A307 (45 mm) for motors with FLA ratings up to 25A, A308 (55 mm) covers motor FLA ratings up to 50A and the A309 (70 mm) is suitable for motor FLA ratings to 100A.

Application Description

The A307, A308 and A309 MMPs can be used in the following applications:

Manual Motor Protectors

All of the MMPs are UL Listed under UL508 as Manual Motor Controllers. They provide an economical solution for applications requiring simple manual starting and stopping of motors. When used as an MMP, they are typically installed in an enclosure. IP55 enclosures are offered as accessories for the MMPs. Separate short-circuit protective devices, such as circuit breakers or fuses, are wired ahead of the MMPs. The short-circuit protective device should be sized per the NEC code and should not exceed 400% of the maximum FLA dial setting of the MMP.

Group Motor Installations

A Group Motor Installation can be defined as more than one motor circuit protected by a single set of fuses or circuit breaker on a motor branch circuit. This eliminates the need for individual fuses or circuit breakers for each motor circuit. Substantial component cost savings, panel space savings and reduced wiring installation time can be achieved in Group Motor Installations.

Table 34-384. Short Circuit Ratings

Description	Specification
UL 508 Type E Manual Combination Starter/Motor Controller	
A307 ①	65 kA @ 240V, 480Y/277V 30 kA @ 600Y/347V up to 12.5A
A308 ①	65 kA @ 240V, 480Y/277V 25 kA @ 600Y/347V
A309 ①	65 kA @ 240V, 480Y/277V 30 kA @ 600Y/347V up to 75A

① See Pages 34-295 – 34-296 for individual ratings.

Features

- ON/OFF Rotary Handle with Lockout Provision
- Visible Trip Indication
- Class 10 Overload Protection
- Phase Loss Sensitivity
- Ambient Temperature Compensation to 140°F

- Fixed Short Circuit Trip — 13 times maximum setting of overload FLA dial
- Type 2 Coordination per IEC 947
- Identification Markers Standard on Starter Faceplate
- Motor Applications from 0.11A to 100A
- Built-in heater and magnetic trip elements to protect the motor
- Adjustment dial for setting motor FLA
- DIN Rail or Panel Mount
- Accessories include:
 - Front and Side Auxiliary Contacts
 - Trip Indicating Contacts
 - Tamperproof Cover for OLR Dial
 - Undervoltage Release
 - Shunt Trip
 - Thru-the-Door Operators
 - Enclosures
 - 3-Phase Line Side Connecting Links

Standards and Certifications

- UL File No. E176513, Category NKJH (A307, A308, A309)
UL File No. E37317, Category NKCR (Accessories)
- CSA File LR12530, Class 3211-05
- IEC 947-1; IEC 947-2; IEC947-4-1
- DIN VDE 0660 Part 100, Part 101 and Part 102

Instructional Leaflets

- IL49490 — A307 Manual Motor Protectors
- IL49491 — A308 Manual Motor Protectors
- IL49492 — A309 Manual Motor Protectors
- IL49493 — C320TR11 Trip Indicating Contacts
- IL49494 — IP55 Enclosures and Front Plates
- IL49495 — C320HN Thru-the-Door Operators
- IL49496 — Indicating Lights

See Application Note — AP03402001E.

Product Selection

Product Selection for Group Motor Installations

When ordering, specify Catalog Numbers according to the following stipulations:

A307, A308 and A309 Manual Motor Protectors are selected based on the overload current range required for a given motor. This current range is determined from the motor Full Load Ampere rating and Motor Service Factor usually found on the motor nameplate.

For motors with service factors less than 1.15, multiply the motor FLA by .92 to select appropriate MMP.

Example: For motor having FLA of 6.4A and service factor of 1.0 (6.4A x .92 = 5.88A) select Catalog Number A307TN.

See Application Note — AP03402001E.

① Select Manual Motor Protectors for use with group motor installations by full load amperes. Horsepower ratings are for reference only.

A307

A308

A309

For motor with service factor of 1.15 or greater, use motor nameplate Full Load Amperes to select the appropriate MMP.

Example: For motor having FLA of 6.4A and service factor of 1.15, select Catalog Number A307UN.

Types A307, A308, A309 Manual Motor Protectors

Product Selection for UL 508 Type E Self-Protected Manual Combination Starter Applications

When ordering, specify Catalog Numbers according to the following stipulations:

A307, A308 and A309 Manual Motor Protectors are selected based on the overload current range required for a given motor. This current range is determined from the motor Full Load Ampere rating and Motor Service Factor usually found on the motor nameplate.

For motors with service factors less than 1.15, multiply the motor FLA by .92 to select appropriate MMP.

Example: For motor having FLA of 6.4A and service factor of 1.0 (6.4A x .92 = 5.88A) select Catalog Number A307TN.

See Application Note — AP03402001E.

① A C320LSA1 Line Side Adapter is required to be installed on the line side of all A307 MMPs when they are used as non-Group Installation Self-Protected Manual Combination Starters. See Page 34-299.

② A C320LSA2 Line Side Adapter is required to be installed on the line side of all A309 MMPs when they are used as non-Group Installation Self-Protected Manual Combination Starters. See Page 34-299.

③ Select UL 508 Type Manual Combination Starter by full load amperes. Horsepower ratings are for reference only.

④ A308 MMPs do not require Line Side Adapters.

Note: A UL 508 Type F Combination Motor Controller consists of a UL 508 Type E Self-protected Manual Combination Starter, a UL Listed Contactor and a UL Listed Line Side Adapter (depending on the application). The Type E Self-Protected Manual Combination Starter alone is a legitimate short-circuit protective device and disconnect means for the downstream motor, while the contactor has been added to provide remote operation of the motor circuit.

For motor with service factor of 1.15 or greater, use motor nameplate Full Load Amperes to select the appropriate MMP.

Example: For motor having FLA of 6.4A and service factor of 1.15, select Catalog Number A307UN.

AE317 Freedom IEC Open Non-reversing Combination Motor Controller

Product Description

The new Cutler-Hammer® Freedom IEC Open Non-reversing and Reversing Combination Motor Controllers from Eaton's electrical business combine a Manual Motor Protector with an IEC Contactor(s) to provide a complete motor protection solution by combining motor disconnect function, thermal overload protection, magnetic short circuit protection and remote control operation in one compact, assembled unit. These assembled Combination Motor Controllers cover motors with FLA ratings from 0.11A to 100A.

Application Description

The Freedom IEC Non-reversing and Reversing Combination Motor Controllers can be used in the following applications:

- Combination Motor Controller (UL 508, Type F), for Single and Multi Motor Panels — The IEC Combination Motor Controllers combine a Manual Motor Protector with an IEC Contactor. The A307, A308, and A309 Manual Motor Protectors are UL listed as UL 508, Type E Self-Protected Manual Combination Starters. This UL listing allows these devices to be used in motor circuits without having to add separate branch short circuit protection with a Line Side Adapter. An IEC magnetic contactor has been added to provide remote operation of the motor circuit.

- Group Motor Installations — Since the Manual Motor Protectors (Manual Combination Starters) are UL listed for Group Motor Installations, the IEC Combination Motor Controllers provide a compact, assembled package for Group Motor Installations up to 480V.

For Group Installations or UL 508 Type E/F applications, the A307, A308 and A309 Manual Motor Protectors have a maximum 600Y/347V rating.

For Group Installations (in-panel SCPD) applying the traditional 1/3 tap rule, Freedom Combination Motor Controllers may be used on 480V Delta systems. For Group Installations, applying the more recent 1/10 tap conductor rule, a maximum 240V Delta is permitted or 480Y/277V.

For actual UL 508 Type E/F applications (out-of-panel upstream feeder SCPD only), the Freedom CMCs may be used on a maximum 240V Delta or 480Y/277V system.

For Manual "At Motor" Disconnect applications, a maximum 240V Delta is permitted or 480Y/277V and 600Y/347V slash rated Wye systems.

Features

- ON/OFF rotary handle with lockout provision
- Visible trip indication
- Test trip function
- Motor applications from 0.11A to 100A
- Class 10 overload protection
- Built-in heater and magnetic trip elements to protect the motor
- Phase loss sensitivity
- Type 2 coordination
- Ambient compensated up to 140°F (60° C)
- High Fault Short Circuit Ratings:
 - 65 kA at 480V for AE317/357, AM317/357 and AE318/358 motor controllers
 - 50 kA at 480V for AE319/359 motor controllers

Table 34-388. Short Circuit Ratings — UL 508 Type E Manual Combination Starter/Motor Controller

Description	Specification
A307 ①	65 kA @ 240V, 480Y/277V 30 kA @ 600Y/347V up to 12.5A
A308 ①	65 kA @ 240V, 480Y/277V 25 kA @ 600Y/347V
A309 ①	65 kA @ 240V, 480Y/277V 30 kA @ 600Y/347V up to 75A

① See Pages 34-295 – 34-296 for individual ratings.

- Magnet coil terminals located at bottom of Contactor for easy access and wiring

- AC and DC coils offered in a variety of voltages
- 1NO and 1NC auxiliary contacts front mounted on MMP — standard on all combination motor controllers
- 1NO auxiliary contact — standard on all magnetic contactors
- DIN rail or panel mount — AE317, AM317 and AM357 motor controllers
- Mounting plates — standard on AE318, AE319, AE358 and AE359 motor controllers
- Adjustment dial for setting motor FLA
- Short circuit trip at 13 times the maximum setting of the FLA adjustment dial

Standards and Certifications

- IEC Type 2 Approved per IEC 60947-4-1
- UL Listed File No. E218618
- CE Mark

Product Selection

AM317 — Miniature Freedom IEC Open Non-reversing Combination Motor Controller

For use as CMCs in Group Installation or UL 508 Type F applications.

When Ordering Specify —

- Select required assembled motor controller by Catalog Number from **Table 34-389** and replace underscore (_) in the Catalog Number with the proper Magnetic Coil Code Suffix Letter from **Table 34-390**.
- All Non-reversing and Reversing motor controllers are selected based on the overload current range required for a given motor. This current range is determined from the motor Full Load Ampere rating and Motor Service Factor usually found on the motor nameplate.

- **For motors with service factors less than 1.15**, multiply the motor FLA by .92 to select the appropriate motor controller. Example: For a motor having FLA of 6.4A and a service factor of 1.0 (6.4A x .92 = 5.88A) select Catalog Number AM317TNS3_.
- **For motors with service factor of 1.15 or greater**, use motor nameplate Full Load Amperes to select the appropriate motor controller. Example: For motor having FLA of 6.4A and service factor of 1.15, select Catalog Number AM317UNS3_.

Instructional Leaflets

See **Page 34-300** for Listing.

DC Coils	
120V DC	A1
12V DC	R1
24V DC	T1
48V DC	W1

Notes —

- Each Combination Motor Controller Includes: (1) C320FMC11 Front Mount Auxiliary Contact 1NO/1NC.
 - The auxiliary contact is designated by the **S** in the following Catalog Number example: AE317ANS3A.
- The CE15***C* signifies a black base, A1 & A2 coil terminals at the bottom and black printing on the label.
- For information on the usage of Line Side Adapters, see **Table 34-403, Page 34-307**.

Note: For more information on Manual Motor Protectors and Wiring Connector Links refer to **Pages 34-294 - 34-299**. For Freedom Contactors refer to **Pages 34-261 - 34-289**.

Types AM/AE317/357, AE318/358, AE319/359 Freedom IEC Combination Motor Controllers

AE357 — Freedom IEC Open Reversing Combination Motor Controller

For use as CMCs in Group Installation or UL 508 Type F applications.

When Ordering Specify —

- Select required assembled motor controller by Catalog Number from **Table 34-395** and replace underscore (_) in the Catalog Number with the proper Magnetic Coil Code Suffix Letter from **Table 34-396**.
- All Non-reversing and Reversing motor controllers are selected based on the overload current range required for a given motor. This current range is determined from the motor Full Load Ampere rating and Motor Service Factor usually found on the motor nameplate.

- **For motors with service factors less than 1.15**, multiply the motor FLA by .92 to select the appropriate motor controller. Example: For a motor having FLA of 6.4A and a service factor of 1.0 (6.4A x .92 = 5.88A) select Catalog Number AE357TNS3_.
- **For motors with service factor of 1.15 or greater**, use motor nameplate Full Load Amperes to select the appropriate motor controller. Example: For motor having FLA of 6.4A and service factor of 1.15, select Catalog Number AE357UNS3_.

Instructional Leaflets

See **Page 34-300** for Listing.

AE318 & AE358 — Freedom IEC Open Non-reversing and IEC Open Reversing Combination Motor Controllers

For use as CMCs in Group Installation or UL 508 Type F applications.

When Ordering Specify —

- Select required assembled motor controller by Catalog Number from **Table 34-397** or **Table 34-398** and replace underscore (_) in the Catalog Number with the proper Magnetic Coil Code Suffix Letter from **Table 34-399**.
- All Non-reversing and Reversing motor controllers are selected based on the overload current range required for a given motor. This current range is determined from the motor Full Load Ampere rating and Motor Service Factor usually found on the motor nameplate.

- **For motors with service factors less than 1.15**, multiply the motor FLA by .92 to select the appropriate motor controller. Example: For a motor having FLA of 45A and a service factor of 1.0 (45A x .92 = 41.40A) select Catalog Number AE318SNS3_.
- **For motors with service factor of 1.15 or greater**, use motor nameplate Full Load Amperes to select the appropriate motor controller. Example: For motor having FLA of 45A and service factor of 1.15, select Catalog Number AE318TNS3_.

Instructional Leaflets

See **Page 34-300** for Listing.

 Discount Symbol **1CD7**

Accessories

Table 34-403. Line Side Adapters (C320LSA1 and C320LSA2) — When to Use Them for U.S. Applications

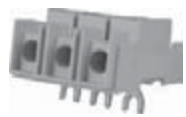

① SCPD = Short Circuit Protective Device (Circuit Breaker, Fuses).

② MMP = Manual Motor Protector.

Reference: Technical Paper AP03402001E.

Note: Line Side Adapters are not required for non-U.S. applications. Most countries outside of the U.S. classify the MMP as a thermal magnetic circuit breaker.

Table 34-404. Accessories

	Description	Catalog Number	Price U.S. \$
	Line Side Adapter for A307 MMPs (Required for use with A307 MMPs only when used as Self-Protected Manual Combination Starters. Not required for Group Installation.)	C320LSA1	
	Line Side Adapter for A309 MMPs ③ (Required for use with A309 MMPs only when used as Self-Protected Manual Combination Starters. Not required for Group Installation.)	C320LSA2	
	Wiring Connector Link (Electrical and mechanical interconnection between A307 MMP + CE12 Freedom Miniature FVNR/FVR Contactor)	C320WC25	
	Wiring Connector Link (Electrical and mechanical interconnection between A307 MMP + CE15 Freedom 45 mm IEC FVNR Contactor — Sizes A – F)	C320WC45	
	Wiring Connector Link (Electrical and mechanical interconnection between A308 MMP + CE15 Freedom 65 mm IEC FVNR Contactor — Sizes G – K)	C320WC65	

③ A308 MMP does not require a Line Side Adapter.

Protection in Different Controller Types

A UL 508 Type E Self-protected Manual Combination Starter/Motor Controller consists of a single device having integral short circuit protection, a main set of contacts, motor overload protection, and may also include a UL Listed Line Side Adapter (see **Table 34-403**). This type of controller is a legitimate short-circuit protective device and disconnect means for the downstream motor. It does require an upstream feeder short circuit protective device, but does not require a dedicated branch circuit protection or a disconnect means. A UL 508 Type E rating means that the unit clears a fault and does not experience any welding of the power poles. A UL 508 Type E self-protected manual motor controller will remain fully functional should a short circuit within its ratings occur. E.g. A307, A308 and A309.

A UL 508 Type F Combination Motor Controller consists of a UL Listed Type E Self-protected Manual Combination Starter/Motor Controller, a UL Listed Contactor, and possibly a UL Listed Line Side Adapter (see **Table 34-403**). While the UL 508 Type E self-protected manual motor controller device is a legitimate short circuit protective device and disconnect means for the downstream motor, the contactor is *not* “self-protected.” E.g. AM317 – AE319 and AM357 – AE359.

In addition, as a complete assembly or with modular components, the device may have Type 2 Coordination certification. Type 2 Coordination means the Starter or Controller must exhibit little or no damage following a major short circuit fault and should be able to be returned to proper service without replacing any parts. E.g. All Freedom CMCs and MMPs.

Discount Symbol **1CD1**
