(1) An RC circuit provides effective protection for circuits highly sensitive to high frequency interference. Voltage limited to 3 Uc maximum, oscillating frequency limited to 400 Hz maximum. Slight increase in drop-out time (1.2 to 2 times the usual time).

(2) For satisfactory protection, a suppressor module must be fitted across the coil of each control relay. (3) Protection is provided by limiting the transient voltage value to 2 Uc maximum. Maximum reduction of transient voltage peaks.

Slight increase in drop-out time (1.1 to 1.5 times the usual time).

(4) Protection is provided by a polarised component; no overvoltage or oscillating frequency. Slight increase in drop-out time (6 to 10 times the usual time).
