

## WW25Q

$\pm 1 \%, \pm 5 \%$
Metal low ohm power chip resistors

## Size 2512 （6432），1W

## Sensing Type

## FEATURE

1．Ultra low and stable TCR performance
2．High power rating and compact size
3．High reliability and stability
4．Reduced size of final equipment
5．RoHS compliant \＆Lead free
6．Excellent Heat dissipation and inrush withstand

## APPLICATION

－Power supply
－PDA
－Digital meter
－Computer
－Automotives
－Battery charger
－DC－DC power converter

## DESCRIPTION

The resistors are constructed in a high grade low resistive metal body．The structure applies no trimming configuration to provide excellent heat dissipation and inrush withstand capability．The resistive layer is covered with a protective coat and printed a resistance marking code over it．Finally，the two external end terminations are added．For ease of soldering the outer layer of these end terminations is a Lead free terminations．

## MARKING

Each resistor is marked with a four－digit code on the protective coating to designate the nominal resistance value．

Example：

$$
\begin{aligned}
& \mathrm{R} 005=0.005 \Omega \\
& \mathrm{R} 010=0.010 \Omega
\end{aligned}
$$

## FUNCTIONAL DESCRIPTION

## Derating curve

The power that the resistor can dissipate depends on the operating temperature；see Fig． 2

Fig． 2 Maximum dissipation in percentage of rated power As a function of the ambient temperature

## MOUNTING

Due to their rectangular shapes and small tolerances，Surface Mountable Resistors are suitable for handling by automatic placement systems．

Chip placement can be on ceramic substrates and printed－circuit boards（PCBs）．
Electrical connection to the circuit is by individual soldering condition．
The end terminations guarantee a reliable contact．

## SOLDERING CONDITIONS

The robust construction of chip resistors allows them to be completely immersed in a solder bath of $260^{\circ} \mathrm{C}$ for 10 seconds．Therefore，it is possible to mount Surface Mount Resistors on one side of a PCB and other discrete components on the reverse（mixed PCBs）．

Surface Mount Resistors are tested for solderability at $235^{\circ} \mathrm{C}$ during 2 seconds within lead－free solder bath． The test condition for no leaching is $260^{\circ} \mathrm{C}$ for 30 seconds．Typical examples of soldering processes that provide reliable joints without any damage are given in Fig
