Electronic Temperature Measuring Equipment

WTT1
 Temperature measurement and calibration.
 • Measures temperature without imposing thermal load.
 The WTT1 digital temperature measuring system has been specifically designed for measuring the temperature of soldering iron tips.
 The probe has a double sensor system and internal heat source. The measured temperature is fed to a control system that records the flow of heat in the probe and stabilizes it with the aid of the internal heat source.
 This design ensures that no heat is drawn by the probe from the object being measured. Erroneous measurements due to the large thermal load of the probe are thus prevented. The measured temperature is indicated on a three-digit LED display to a resolution of 1°C.
 An adjustable preheat temperature ensures a rapid response even at high temperatures.
