### muRata **P** Murata Power Solutions

### **PQC250 Series** 250W 3" x 5" Convection Cooled AC-DC Power Supply

DESCRIPTION The PQC250 series switching power supplies utilize advanced component and circuit technologies to

deliver high efficiency and low power dissipation in both operational and standby operation in a compact 3.0" x 5.0" x 1.40" package. Designed for industrial, medical, computing, communications, telecom, consumer, and other OEM applications, deployable in 1U customer systems. All models offer universal AC input capability with active power factor correction (PFC) and compliance to worldwide safety and EMC standards.

#### ORDERING GUIDE (BASIC MODEL NUMBER)

|                               | Main output (V1)           |                           |                                   | Aı  | ıx Output (V2)           | Max. Load                  |  |  |

Optional cover kit assembly see PQC-COVER datasheet for details POC-COVER Output De-Rating at 70°C is for horizontal orientation with component side up only. Please refer to ACAN-77 for details 29V model available, consult with factory for more information

#### **FEATURES**

- Industry leading MTBF
- Certified to IEC60601 Ed.3 medical (2 x MOPP Pri-Sec; 1 x MOPP Pri-Chassis Ground), AC input models.
- 60950-1 compliant
- IEC60335-1 Certificate
- Designed to comply with IEC60601-1-2 4<sup>th</sup> Edition EMC Standard Requirements<sup>1</sup>
- 250W Convection, 100Vac to 264Vac +50C operation Very low no load standby power; designed to meet ENERGY STAR® Program Requirements for Single Voltage
- External AC-DC Power Supplies True zero load operation of the Main (V1) output; no minimum load requirements
- 3" x 5" industry standard footprint
- Optional DC input capability
- High efficiency 94% typical
- Remote sense, main output
- Universal AC input with active PFC
- Less than 1U high
- RoHS compliant
- Active inrush protection
- Compatibility with MVAC250 Series products<sup>1</sup>
- Droop current share, output Terminal block option
- Two-year warranty

1 fan output of MVAC250 series not available on this product

### muRata P. Murata Power Solutions

### 250W 3" x 5" Convection Cooled AC-DC Power Supply

#### CURRENT SHARING OPTION – PQC250-XX-DXX

| Model Number  | Description  |
|---|--|
| PQC250-XX-Dxx<br>Refer to <u>ACAN-78</u><br>for additional<br>details | Main Output current share is achieved using "the droop method". Nominal output voltage is achieved at 50% load and output voltage increases/decreases approximately $\pm$ 3% of nominal voltage. This regulation window does not include the additional tolerance due to line, temperature, long term stability etc. Startup of parallel power supplies is not internally synchronized. If more than 250W combined power is needed, start-up synchronization must be provided by system using a common PS_ON signal. To account for $\pm$ 10% full load current sharing accuracy and the reduction in full load output voltage due to droop, available output power must be derated by 15% when units are operated in parallel. Current sharing can be achieved with or without remote sense connected to the common load. ORing protection is available on the PQC250-xxDRT models (see Application notes, <u>ACAN-78</u> for additional details); Aux (V2) output can be tied together for redundancy but total combined output power must not exceed 2.5W, external ORing devices are recommended to preserve redundancy. |

| Characteristic                     | Standard             | Compliance   |
|------------------------------------|----------------------|--|
| Input Current Harmonics            | IEC/EN 61000-3-2     | Class A  |
| Voltage Fluctuation and Flicker    | IEC/EN 61000-3-3     | Complies   |
| Conducted Emissions                | EN 55022             | Class B  |
| Conducted Emissions                | FCC Part 15          | Class B  |
| Radiated Emissions                 | CISPR 22 -3 meter    | Class B  |
|                                    | FCC 15.109 - 3 meter | Class B  |
| ESD Immunity                       | IEC/EN 61000-4-2     | Level 4, Criterion 2   |
| Radiated Field Immunity            | IEC/EN 61000-4-3     | Level 3, Criterion A   |
| Electrical Fast Transient Immunity | IEC/EN 61000-4-4     | Level 4, Criterion A   |
| Surge Immunity                     | IEC/EN 61000-4-5     | Level 3, Criterion A (Com. Mode: 2kV 12 OHM, Diff<br>Mode: 1kV, 2 OHM) |
| Radiated Field Conducted Immunity  | IEC/EN 61000-4-6     | Level 3, 10V/m, Criterion A  |
| Magnetic Field Immunity            | IEC/EN 61000-4-8     | Level 3, Criterion A   |
| Voltage dips, interruptions        | IEC/EN 61000-4-11    | Level 3, Criterion B   |

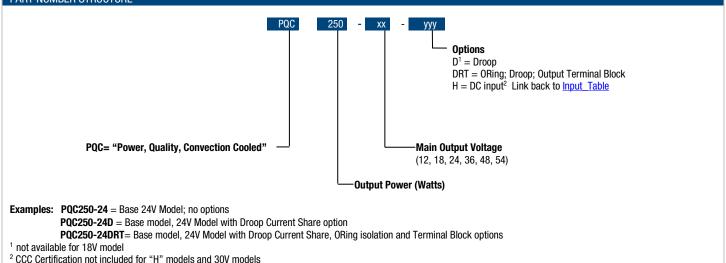

#### EMI CONSIDERATIONS

For optimum EMI performance, the power supply should be mounted to a metal plate grounded to all 4 mounting holes of the power supply. To comply with safety standards, this plate must be properly grounded to protective earth (see mechanical dimension notes). Pre-compliance testing has shown the stand-alone power supply to comply with EN55022 class B radiated emissions with a metal enclosure with grounded base plate. See <u>PQC-COVER</u> for details - testing was based on adding a toroid, Fair-Rite#5961004901 with five turns of both of the output leads. Radiated emission results vary with system enclosure and cable routing paths.

### STATUS AND CONTROL SIGNALS

| Parameter | Models     | Conditions  |
|-----------|------------|---|
| PS_ON     | All Models | This pin must be pulled low (sink current $>2mA$ ) to $+5V_AUX_RTN$ to turn on the main output. The $+5V_AUX$ output is independent of the PS_ON signal, and comes up automatically when the input AC or input DC voltage is applied within their specified operating ranges.         |
| PWR_0K    | All Models | Open collector logic goes high 40-100ms after the main output is within regulation; it goes low at least 2msecs before loss of regulation. Internal 10K pull up to +5V_Aux is provided. Applications using the PWR_OK signal should maintain a minimum load of 5W on the main output. |

#### THERMAL CONSIDERATIONS

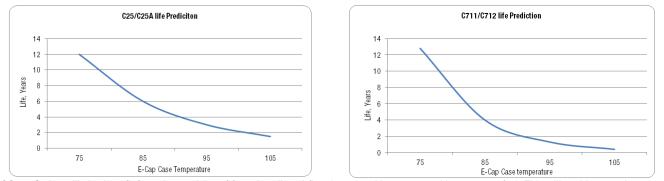

System thermal management is critical to the performance and reliability of the PQC250 series power supplies. Performance <u>derating curves</u> are provided which can be used as a guideline for what can be achieved in a system configuration with controlled airflow at various input voltage conditions.

The product is designed to provide 250W using natural convection cooling when mounted horizontally with un-obstructed convection current airflow flow at room temperature. At elevated temperature the power supply data is taken while it is surrounded by a large vented enclosure to minimize forced cross flows inherent in the elevated temperature test.

The product is capable of operation when mounted in other orientations; operational/derating curves shall be provided to show the effect of such mounting. See <u>ACAN-77</u> for additonal details

#### Capacitor case temperature and Mounting Orientation:

The power supply can operate in any orientation; however, the power supply contains overtemperature protection that will shut off the output as the temperature of the power supply heatsinks approach the limt specified in the <u>protection table</u>. Additonally, life expectantcy of the power supply is inversely proportional to the case temperature of electrolytic capacitors <u>C25, C25A, C711 & C712</u>. The designer of the system in which this power supply is deployed should consider this relationship to ensure optium product life. The following charts illustrate this relationship:

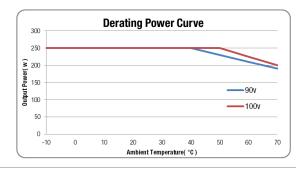

The PQC250 Series will also benefit from the provision of forced cooling airflow (generated by an external host system fan). This will enable operation at potentially higher local surrounding ambient temperatures.

Please refer to <u>ACAN-78</u> for additonal details

Derating Curve vs. Temperature (based on horizontal mounting, PTH components facing up, natural convection)

Derating curves are provided to indicate operation at varying input voltages with respect to temperature. See <u>ACAN-77</u> for more details Link <u>Back to Thermal Considerations</u>; <u>Ordering Guide</u>

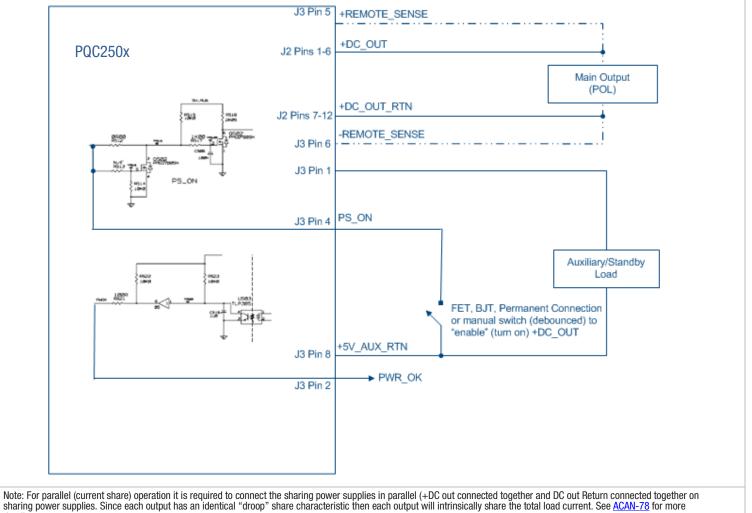

## **PQC250 Series**

250W 3" x 5" Convection Cooled AC-DC Power Supply

WIRING DIAGRAM FOR OUTPUT

Dotted lines show optional remote sense connections, that can be extended to the Point of Load (POL) which can be some physical distance from the power module output connector (J2). The intent is to compensate for any voltage drop in the cables to the to maintain voltage regulation at the POL .

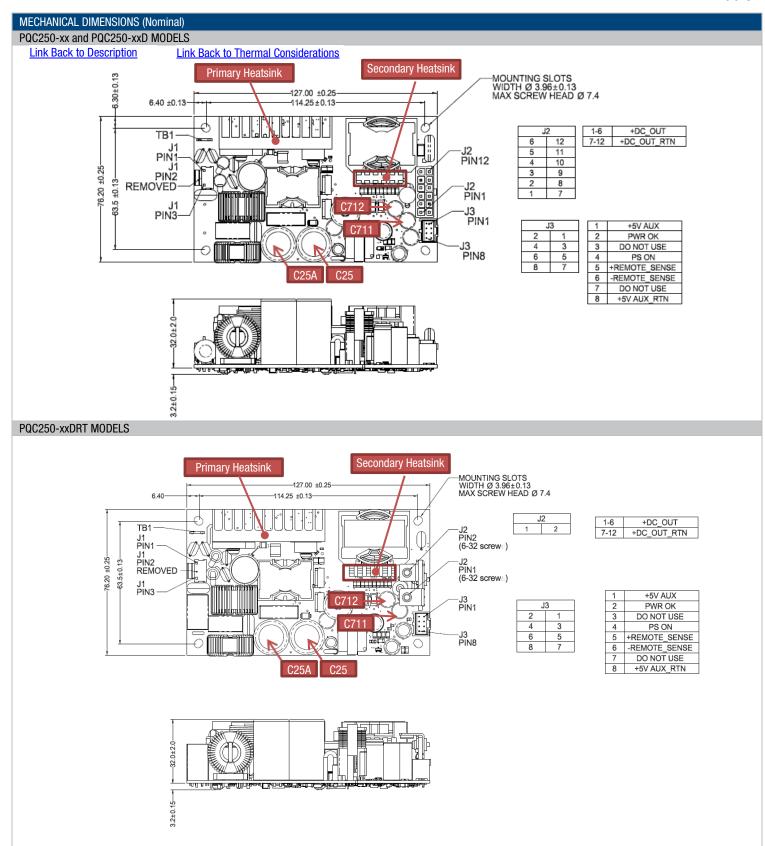

details.

#### SAFETY CONSIDERATIONS This power supply is a component level power supply intended for use in Class I or Class II applications. Secondary ground traces need to be suitably 1. isolated from primary ground traces when used in Class II applications. When the power supply is used in Class II equipment, all ground traces and components connected to the primary side are considered primary for spacing 2. and insulation considerations. 3. Protective bonding conductor from the end product protective earthing terminal must be tied to TB1. For optimum EMI performance, while maintaining class I safety isolation all 4 mounting holes must be tied to the end product protective earthing terminal. To maintain Class II safety isolation mounting holes MTG1 and MTG2 need to be isolated from protective earth and should use standoffs of non-conductive material. This power supply requires mounting standoffs of minimum 6mm in height. If there is risk of chassis deformation or shorter standoff height is required, an appropriate insulator must be used under the power supply with adequate extension beyond the outline of the power supply. In all cases, the applicable safety standards must be applied to ensure proper creepage and clearance requirements are met. The primary heatsink is considered a live primary circuit, and should not be touched. It is recommended that the primary heatsink be kept at least This product is subject to the following operating requirements and the Life and Safety Critical Application Sales Policy: 4. 5. 6. http://www.murata-ps.com/requirements/ 7. Used only in non-tropical conditions.
