## 1 General Description

### 1.1 Scope

This specification covers the operation and operating requirements of the vacuum fluorescent graphic display module GU140X16J-7000B.

### 1.2 Construction

The module consists of a $140 \times 16$ dot graphic BD-VFD, refresh RAM, character generator, DC/DC converter, display controller, and all necessary control logic.
The module can simultaneously display graphic patterns and characters on the screen.

### 1.3 Outline

Power supply: $\quad$ Single $5 \mathrm{~V}_{\mathrm{DC}}$ power supply
Interface: Parallel interface (CMOS-level)
Serial interface (Asynchronous, can accept RS-232 level)
Function: Character display $-5 \times 7$ dot, with display attributes
$5 \times 7$ Character font (specification DS-898-0002-xx)
Graphic display
Control command
Character download function
Screen saver function
Applicable VFD Module reliability specification : TT-99-3102
Applicable VFD Module quality specification : TT-98-3413
Applicable VFD quality specification : TT-93-3336D

### 1.4 Weight

Approximately 74g

### 1.5 Block Diagram

## 2 Electrical specifications

### 2.1 Absolute Maximum Ratings

| Parameter | Symbol | Min. | Typ. | Max. | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Power Supply Voltage | $\mathrm{V}_{\mathrm{CC}}$ | -0.3 | - | +6.0 | $\mathrm{~V}_{\mathrm{DC}}$ |
| Logic Input Voltage <br> D0-D7, /WR, /RD, /RESET | $\mathrm{V}_{\mathrm{IN} 1}$ | -0.3 | - | $\mathrm{V}_{\mathrm{CC}}+0.3$ | $\mathrm{~V}_{\mathrm{DC}}$ |
| Logic Input Voltage <br> SIN | $\mathrm{V}_{\mathrm{IN} 2}$ | -20.0 | - | +20.0 | $\mathrm{~V}_{\mathrm{DC}}$ |

### 2.2 Electrical ratings

| Parameter | Symbol | Min. | Typ. | Max. | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Power Supply Voltage | $\mathrm{V}_{\mathrm{CC}}$ | 4.75 | 5.0 | 5.25 | $\mathrm{~V}_{\mathrm{DC}}$ |

Driving voltage for the VFD is obtained from the on-board DC/DC converter.

### 2.3 Electrical Characteristics

Measuring Conditions: Ambient temperature $=25{ }^{\circ} \mathrm{C}, \mathrm{V}_{\mathrm{CC}}=5.0 \mathrm{~V}_{\mathrm{DC}}$

| Parameter |  | Symbol | Min. | Typ. | Max. | Unit | Condition | Note |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 'L' Level Logic Input Current D0-D7, /WR, /RD |  | $l_{\text {lL1 }}$ | - | - | -0.15 | mA | $\mathrm{V}_{1 \times 1}=0 \mathrm{~V}$ |  |
| 'L' Level Logic Input Current /RESET |  | IIL2 | - | - | -0.6 | mA | $\mathrm{V}_{1 \times 1}=0 \mathrm{~V}$ |  |
| 'H' Level Logic Input Current D0-D7, /WR, /RD, /RESET |  | $\mathrm{IIH}^{\text {H }}$ | - | - | 1.0 | $\mu A_{D C}$ | $\mathrm{V}_{1 \times 1}=5 \mathrm{~V}$ | - |
| Logic Input Voltage D0-D7,/WR,/RD, /RESET | 'H' | $\mathrm{V}_{\mathrm{HH} 1}$ | 0.8 V Cc | - | $\mathrm{V}_{\mathrm{cc}}$ | - | - | - |
|  | 'L' | $\mathrm{V}_{\text {IL1 }}$ | 0 | - | $0.2 \mathrm{~V}_{\text {cc }}$ | $V_{\text {DC }}$ | - | - |
| Logic Output Voltage D7(Busy flag), PBUSY | 'H' | $\mathrm{V}_{\mathrm{OH} 1}$ | 3.8 | - | $\mathrm{V}_{\text {cc }}$ | $V_{D C}$ | $\mathrm{l}_{\mathrm{OH} 1}=-1.5 \mathrm{~mA}$ | - |
|  | 'L' | $\mathrm{V}_{\text {OL1 }}$ | 0 | - | 0.6 | $V_{D C}$ | $\mathrm{l}_{\mathrm{OL} 1}=1.6 \mathrm{~mA}$ | - |
| Logic Input Resistance SIN |  | RIN | 3 | - | - | k $\Omega$ | - | - |
| Logic Input Voltage SIN | 'H' | $\mathrm{V}_{1+2}$ | 3.0 | - | +15 | $V_{D C}$ | - | - |
|  | 'L' | $\mathrm{V}_{\text {IL2 }}$ | -15 | - | 0.5 | $V_{D C}$ | - | - |
| Logic Output Voltage SBUSY | 'H' | $\mathrm{V}_{\mathrm{OH} 2}$ | 4.0 | - | $\mathrm{V}_{\mathrm{Cc}}$ | $V_{D C}$ | $\mathrm{R}_{\mathrm{L}}=3 \mathrm{k} \Omega$ | - |
|  | 'L' | $\mathrm{V}_{\text {OL2 }}$ | 0 | - | 0.5 | $V_{D C}$ | $\mathrm{R}_{\mathrm{L}}=3 \mathrm{k} \Omega$ | - |
| Power Supply Current 1 |  | $\mathrm{ICC1}$ | - | 500 | 650 | $m A_{D C}$ | - | (1) |
| Power Supply Current 2 |  | $\mathrm{ICC2}$ | - | 390 | 510 | $m A_{D C}$ | - | (2) |
| Power Supply Current 3 |  | $\mathrm{I}_{\text {cc3 }}$ | - | 25 | 35 | $m A_{D C}$ | - | (3) |
| Power Consumption |  |  | - | 2.5 | 3.25 | W | - | (1) |

Note:
(1) $I_{C C 1}$ is the current when all dots in the display are on.
(2) $I_{C C 2}$ is the current when all dots in the display are off.
(3) $I_{\text {CC3 }}$ is the current in Display Power OFF Mode (power-save mode).

At power-on, inrush current can be approximately twice the current in the above table rush.
A quick-rise type power supply ( $<100 \mathrm{~ms}$ ) is recommended.

## 3 Optical Specifications

Number of dots: $\quad 2,240(140 \times 16)$
Display area: $\quad 102.75 \mathrm{~mm} \times 18.8 \mathrm{~mm}(\mathrm{X} \times \mathrm{Y})$
Dot size: $\quad 0.585 \mathrm{~mm} \times 1.025 \mathrm{~mm}(\mathrm{X} \times \mathrm{Y})$
Dot pitch: $\quad 0.735 \mathrm{~mm} \times 1.185 \mathrm{~mm}(\mathrm{X} \times \mathrm{Y})$
Luminance:
$350 \mathrm{~cd} / \mathrm{m}^{2}$ Min. (1000cd/m2 Typ.)
Color of illumination: Green (Blue Green)

## 4 Environmental Specifications

Operating temperature:
-40 to $+85{ }^{\circ} \mathrm{C}$
Storage temperature: $\quad-40$ to $+85{ }^{\circ} \mathrm{C} \quad\left(-60\right.$ to $-40^{\circ} \mathrm{C}$ in less than 168 hours.)
Operating humidity:
20 to $80 \%$ RH (non-condensing)
Storage humidity:
20 to $80 \%$ RH (non-condensing)
Vibration:
$10-55-10 \mathrm{~Hz}$, all amplitude $1 \mathrm{~mm}, \mathrm{X}-\mathrm{Y}-\mathrm{Z}, 30$ minutes (non-operating)
Shock:
$392 \mathrm{~m} / \mathrm{s}^{2}(40 \mathrm{G}), 9 \mathrm{~ms}, \mathrm{X}-\mathrm{Y}-\mathrm{Z}, 3$ times each direction (non-operating)

## 5 Interface

### 5.1 Type of interface

The following interfaces are available on this module:
Parallel interface (CMOS-level)
Serial interface (Asynchronous, can accept RS-232 level)

### 5.2 Parallel interface

### 5.2.1 Basic function

The module sets the PBUSY line upon receipt of data, and clears the line when ready to receive more data. PBUSY signal can be read directly, or by bit D7 Status read.
RS terminal is not used in this module.

| Operation | WR | /RD | /RS | D0-D7 |
| :---: | :---: | :---: | :---: | :---: |
| Data write | $0 \rightarrow 1$ | 1 | X | D0-D7: Data write |
| Status read | 1 | 0 | X | D0-D6: Undefined <br> D7: PBUSY Flag <br> 1:BUSY, 0:READY |

### 5.2.2 Parallel Interface timing

Write timing

Read timing

### 5.3 Serial interface

### 5.3.1 Basic function

The asynchronous serial interface can accept RS-232 level input. The module sets the SBUSY line upon receipt of data, and clears the line when ready to receive more data.

### 5.3.2 Asynchronous serial interface timing

Interface:

| Baud rate | $9,600 / 19,200 / 38,400 / 115,200$ bps (set by Jumper) |
| :---: | :---: |
| Parity | None |
| Format | Start (1 bit) + Data $(8$ bit $)+$ Stop ( 1 bit) |
| Handshake | SBUSY |

Receive buffer capacity: 60 bytes
SBUSY change timing:

| SBUSY | 1 (BUSY) | 0 (READY) |
| :---: | :---: | :---: |
| Condition | Data in receive buffer | No data in receive buffer |

To prevent data loss, data should not be sent when SBUSY=1.

### 5.4 Reset timing

Reset pulse (active low) should be longer than 1 ms .
The module sets the SBUSY/PBUSY line upon receipt of Reset signal and clears the line when ready to receive data.

## 6 Display specification

### 6.1 Displayable image types

### 6.1.1 Graphic display

Number of dots:

### 6.1.2 Character display

Character mode:
Character font type:
Character display width:
Attribution:
$140 \times 16$ dots
$5 \times 7$ dot
$5 \times 7$ dot characters: ANK, international font
Fixed character format 1 \& 2, Proportional character format 1 \& 2
Font Magnification, Reverse

### 6.2 Display memory

Size: $512 \times 16$ dots - separated as: Display area ( $140 \times 16$ dots $)$
Hidden area ( $372 \times 16$ dots)
Display Memory is comprised of Display area and Hidden area, as shown below.
By using "User Window" function, the memory area can be separated, and each separate window can be controlled independently (refer to 7.1.37 Window command group, page 28).
Hidden area can be displayed by using scroll or other action commands (refer to 7.1.23 Display action command group, page 19).

### 6.3 Window

Window function enables the display screen to be divided into "windows" each of which can be controlled and displayed independently.
Display Memory is shared by all windows; individual windows do not have their own display memory. There are 2 types of "window": Base-Window and User-Window. Refer to "Window command group", page 28.

### 6.3.1 Base-Window

Base-Window covers the entire display screen. If no User-Windows are defined, all display operation is processed on this window. If one or more User-Windows are defined, display operation on any area not covered by a User-Window is done by selecting Base-Window.
When Base-Window is selected, even if User-Window(s) are defined, all display operation is processed under Base-Window. Therefore the current display contents of User-Window(s) is overwritten.

| Base-Window |  | ABCDEFG |
| :--- | :--- | :--- |
|  |  | $\cdots$ KLMN |
|  | 012345 | 7 QRSTU User-Window |
|  |  |  |

### 6.3.2 User-Window

User-Window is defined by User-Window definition command. Display operation is processed on the window selected by Current Window select command.
A maximum of 4 User-Windows can be defined.

| User-Window 1 | User-Window 2 | User-Window 4 |
| :---: | :--- | :--- |
|  |  |  |
| Base-Window | User-Window 3 |  |

### 6.4 Write screen mode

This setting is only applicable for Base-Window.
There are two Write screen modes, Display screen mode and All screen mode. The mode is set by command (refer to Window command group, "Write screen mode select", page 30).

### 6.4.1 Display screen mode

When the cursor is located in the Display area, all operation will be done within Display area, and when cursor is located in the Hidden area, it will be done within Hidden area.

### 6.4.2 All screen mode

Regardless of the cursor position, operation will be done over the entire area.

### 6.5 Character display format

Character display format is as follows, as set by "Character display width" command.

| Type of character | Display position | Format | Fixed character width 1 | Fixed character width 2 | Proportional character width 1 | Proportional character width 2 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Standard character and Download character $5 \times 7$ dot | $\bar{Y}=0$ <br> (Top line) | Character format | $5 \times 7$ | $5 \times 7$ | $\mathrm{n} \times 7$ | $\mathrm{n} \times 7$ |
|  |  | Upper space | 0 | 0 | 0 | 0 |
|  |  | Lower space | 1 | 1 | 1 | 1 |
|  |  | Left space | 0 | 1 | 0 | 1 |
|  |  | Right space | 1 | 1 | 1 | 1 |
|  | $\begin{aligned} & \hline \mathrm{Y}=1 \\ & \text { (Bttom line) } \end{aligned}$ | Character format | $5 \times 7$ | $5 \times 7$ | $\mathrm{n} \times 7$ | $\mathrm{n} \times 7$ |
|  |  | Upper space | 1 | 1 | 1 | 1 |
|  |  | Lower space | 0 | 0 | 0 | 0 |
|  |  | Left space | 0 | 1 | 0 | 1 |
|  |  | Right space | 1 | 1 | 1 | 1 |
| Download character $7 \times 8$ | $\begin{aligned} & \hline Y=0 \\ & (\text { Top line }) \\ & Y=1 \\ & \text { (Bottom line) } \end{aligned}$ | Character format | $6 \times 8$ * | $7 \times 8$ | $6 \times 8$ * | $7 \times 8$ |
|  |  | Upper space | 0 | 0 | 0 | 0 |
|  |  | Lower space | 0 | 0 | 0 | 0 |
|  |  | Left space | 0 | 0 | 0 | 0 |
|  |  | Right space | 0 | 0 | 0 | 0 |

* The left-most $6 \times 8$ dot part of the $7 \times 8$ dot character is displayed.

Note: When a proportional character width is specified, the blank character (20h) is treated as a 2-dot width character.

Fixed character width 1

Proportional character width 1

Fixed character width 2

Proportional character width 2

## 7 Function

### 7.1 Commands

This section describes the operation of each command.
Note: The character size ( $\mathrm{X} \times \mathrm{Y}$ dot) referred to in this section, depends on the "Character display width" and "Font magnified display" settings.
The number of $X$ dots and $Y$ dots for 1 character for each character display width are as follows:

| Character type | Fixed character <br> width 1 | Fixed character <br> width 2 | Proportional <br> character width 1 | Proportional <br> character width 2 |
| :---: | :---: | :---: | :---: | :---: |
| Number of X dots | $5+1$ | $5+2$ | $5+1$ | $5+2$ |
| Number of Y dots | $7+1$ | $7+1$ | $7+1$ | $7+1$ |

MD1 mode, MD2 mode, and MD3 mode, described below, refer to Over-write mode, Vertical scroll mode, and Horizontal scroll mode respectively. (To select the mode, refer to the commands "US MD1", "US MD2", and "US MD3".)

### 7.1.1 Character display

Code:
20h - FFh
Name: Character display
Function: Display character at cursor position.
This command operates on the currently-selected window (refer to Window select).

MD1 (Over-write mode)

| Cursor position |  | Display Operation |
| :--- | :---: | :---: |
| X direction | Y direction |  |
| Space for character on right <br> side. | - | HT >> Display >> HT |
| Right end | Space for character in next <br> lower line. | No space for character in <br> next lower line. |

MD2 (Vertical scroll mode)

| Cursor position |  | Display <br> Operation |
| :--- | :--- | :---: |
| X direction | Y direction |  |
| Space for character on right side. | - | HT >> Display >> HT |
| Right end | Space for character in next <br> lower line. | No space for character in next <br> lower line. |
|  |  |  |

MD3 (Horizontal scroll mode)

| Cursor position |  | Display Operation |
| :--- | :---: | :---: |
| X direction | Y direction |  |
| The space for 1 character size is in <br> right side. | - | HT >> Display >> HT |
| Right end | - |  |

### 7.1.2 BS (Back Space)

## Code: <br> 08h

Function: Cursor moves to the left by one character.
This command has effect for the currently-selected window.

MD1 (Over-write mode) and MD2 (Vertical scroll mode)

| Cursor position |  | Display Operation |
| :---: | :---: | :---: |
| X direction | Y direction |  |
| Space for character on left side. | - | Cursor moves left by one character. |
| Left end | Space for one line above. | Cursor moves to right end of next upper line. |
|  | No space for one line above | Cursor does not move. |

MD3 (Horizontal scroll mode)

| Cursor position |  | Display Operation |
| :--- | :---: | :--- |
| X direction | Y direction |  |
| Space for character on left side. | - | Cursor does not move. |
| Left end | - |  |

### 7.1.3 HT (Horizontal Tab)- 1 character to right

Code: 09h
Function: Cursor moves to the right by one character.
This command has effect for the currently-selected window.
MD1 (Over-write mode)

| Cursor position |  | Display Operation |
| :--- | :--- | :--- |
| X direction | Y direction |  |
| Space for character on right side. | Cursor moves right by one <br> character. |  |
|  | Space for character in next <br> lower line. | Cursor moves to left end of next <br> lower line. |
|  | No space for character in next <br> lower line. | Cursor moves to left end of top line. |

MD2 (Vertical scroll mode)

| Cursor position |  | Display Operation |  |  |  |
| :--- | :--- | :--- | :---: | :---: | :---: |
| X direction | Y direction | Cursor moves right by one character. |  |  |  |
| Space for character on <br> right side. | Right end |  |  | Space for character in next <br> lower line. | Cursor moves to left end of next lower line. |

MD3 (Horizontal scroll mode)

| Cursor position |  | Display Operation |  |
| :--- | :---: | :--- | :---: |
| X direction | Y direction |  |  |
| Space for character on right side. | - | Cursor moves right by one character. |  |
| Right end | - | Contents of current line scroll left until sufficient space for <br> character is available at the right end <br> Cursor moves to the left edge of newly-created space. |  |

### 7.1.4 LF (Line Feed) <br> Code: OAh

Function: Cursor moves to next lower line.
This command has effect for the currently-selected window.
MD1 (Over-write mode)

| Cursor position |  | Display Operation |  |
| :---: | :--- | :--- | :---: |
| $\mathbf{X}$ direction | Y direction | Cursor moves to the same position on next <br> lower line. |  |
| - | Space for character in next lower <br> line. | No space for character in next lower <br> line. |  | | Cursor moves to the same position on top line. |
| :--- |

MD2 (Vertical scroll mode)

| Cursor position |  | Display Operation |  |
| :--- | :--- | :--- | :---: |
| $\mathbf{X}$ direction | Y direction | Space for character in next lower <br> line. |  |
| - | Cursor moves to the same position on next lower <br> line. |  |  |
|  |  |  |  |  |
|  |  |  |  |
|  |  |  | | Display contents are scrolled up the required |
| :--- |
| number of dots, and the bottom line is cleared. |
| Cursor does not move. |

MD3 (Horizontal scroll mode)

| Cursor position |  | Display Operation |
| :---: | :---: | :---: |
| X direction | Y direction |  |
| - | - | Cursor does not move. |

### 7.1.5 HOM (Home Position)

Code: OBh
Function: Cursor moves to home position (top left).
This command has effect for the currently-selected window.

### 7.1.6 CR (Carriage Return)

Code: ODh
Function: Cursor moves to left end of current line.
This command has effect for the currently-selected window.

### 7.1.7 US \$ xL xHyLyH <br> (Cursor Set)

Code: 1Fh 24h xL xH yL yH
xL: $\quad$ Cursor position $x$, lower byte (1 dot / unit)
$x H: \quad$ Cursor position $x$, upper byte (1 dot / unit)
$y \mathrm{~L}: \quad$ Cursor position y , lower byte ( 8 dots / unit)
$\mathrm{yH}: \quad$ Cursor position y , upper byte (8 dots / unit)
Definable area: $\quad 0000 \mathrm{~h} \leq(x L+x H \times 100 h) \leq 01 F F h$ $0000 \mathrm{~h} \leq(\mathrm{yL}+\mathrm{yH} \times 100 \mathrm{~h}) \leq 0001 \mathrm{~h}$
Function: Cursor moves to the specified ( $\mathrm{X}, \mathrm{Y}$ ) position on Display Memory. If the specified $X, Y$ position ( $X$ and/or $Y$ ) is outside the definable area, or outside the currently-selected window, the command is ignored and the cursor remains in the same position.
This command has effect for the currently-selected window.

### 7.1.8 CLR (Display Clear) <br> Code: OCh

Function: Display screen is cleared and cursor moves to home position.
This command has effect for the currently-selected window.

### 7.1.9 US C $n$ (Cursor display) <br> Code: 1Fh 43h n

n : Cursor display setting
Definable area: $\quad 00 h \leq n \leq 01 h$
$\mathrm{n}=00 \mathrm{~h}$ : Cursor display OFF
$\mathrm{n}=01 \mathrm{~h}$ : Cursor display ON
Default: $\quad \mathrm{n}=00 \mathrm{~h}$ (Cursor OFF)
Function: Cursor display setting.
When cursor display is ON , cursor position appears as reverse blinking, $1 \times 8$ dots.
When cursor is in hidden area, it does not appear, even when cursor display is set ON.
This command has effect for the currently-selected window.

### 7.1.10 ESC @ (Initialize Display) <br> Code: 1Bh 40h

Settings return to default values.
Jumper settings are not re-loaded.
Contents of receive buffer remain in memory.

### 7.1.11 ESC \% n (Download character ON/OFF) <br> Code: 1Bh 25h n

Function: Enable or disable display of download characters.
$\mathrm{n}=01 \mathrm{~h}$ : Enable (If download character is not defined, built-in character is displayed)
$\mathrm{n}=00 \mathrm{~h}$ : Disable
Characters already displayed are not affected.

### 7.1.12 ESC \& ac1 c2 [x1 d1...d(axx1)]...[xk d1...d(a×xk)] (Download character definition) <br> Code: 1Bh 26h a c1 c2 [x1 d1...d(axx1)]...[xk d1...d(axxk)]

a: Select character type
c1: Start character code
c2: End character code
x : $\quad$ Number of dots for X-direction
d: Definition data
Definable area: $\quad a=01 h$

$$
\begin{aligned}
& x=05 \mathrm{~h}: 5 \times 7 \text { dot } \\
& \mathrm{x}=07 \mathrm{~h}: 7 \times 8 \mathrm{dot} \\
& 20 \mathrm{~h} \leq \mathrm{c} 1 \leq \mathrm{c} 2 \leq \mathrm{FFh} \\
& 00 \mathrm{~h} \leq \mathrm{d} \leq \mathrm{FFh} \\
& \mathrm{x}=05 \mathrm{~h}: \text { Upper } 7 \text { bits are valid. } \\
& \mathrm{x}=07 \mathrm{~h}: \text { All } 8 \text { bits are valid. } \\
& \mathrm{k}=\mathrm{c} 2-\mathrm{c} 1+1
\end{aligned}
$$

Function: Define download characters into RAM.
A maximum of 16 download characters can be defined.
$x=05 \mathrm{~h}$ : Defined as $5 \times 7$ dot. Surrounding space is same as standard character display.
$x=07 \mathrm{~h}$ : Defined as $7 \times 8$ dot. Displayed as $6 \times 8$ or $7 \times 8$ dot character (refer to 6.5 "Character display format").
After the maximum number of download characters are defined, in order to define other character codes, space must first be obtained using the Download character delete command.
Downloaded characters are valid until redefined, an initialize (ESC @) sequence is executed, or the power is turned off.
To display download characters the commands Download character definition and Download character ON/OFF (set to ON) are required.
If a currently-displayed download character is re-defined, there is no affect on the currently-displayed character. It is effective only for newly input characters.

d1 d2 d3 d4 d5

d1 d2 d3 d4 d5 d6 d7

### 7.1.13 ESC ? a c (Download character delete)

Code: 1Bh 3Fh a c
a: Select character type
c: Delete Character code
Definable area: $\quad a=01 h$

$$
20 \mathrm{~h} \leq \mathrm{c} \leq \mathrm{FFh}
$$

Function: Delete defined download character.
Built-in character is displayed after download character is deleted.
Characters already displayed are not affected.
Command is ignored if download character is not defined for the given character code.

### 7.1.14 ESC R $\mathbf{n}$ (International font set)

Code: 1Bh 52h n
Definable area: $00 h \leq n \leq 0 D h$
Default: $\mathrm{n}=00 \mathrm{~h}$
Function: Select international font set.
Characters already displayed are not affected.

| $\mathbf{n}$ | Font set |
| :---: | :---: |
| 00 h | America |
| 01 h | France |
| 02 h | Germany |
| 03 h | England |
| 04 h | Denmark 1 |
| 05h | Sweden |
| 06h | Italy |
| 07h | Spain1 |
| 08 h | Japan |
| 09 h | Norway |
| 0Ah | Denmark2 |
| 0Bh | Spain2 |
| 0Ch | Latin America |
| 0Dh | Korea |

### 7.1.15 ESC t n (Character table type)

Code: 1Bh 74h n
Definable area:

$$
\begin{aligned}
\mathrm{n}= & 00 \mathrm{~h}, 01 \mathrm{~h}, 02 \mathrm{~h}, 03 \mathrm{~h}, 04 \mathrm{~h}, 05 \mathrm{~h}, 10 \mathrm{~h}, 11 \mathrm{~h}, \\
& 12 \mathrm{~h}, 13 \mathrm{~h}
\end{aligned}
$$

Default: $\mathrm{n}=00 \mathrm{~h}$
Function: Select Character table type.
Characters already displayed are not affected.

| $\mathbf{n}$ | Font code type |
| :---: | :---: |
| 00 h | PC437(USA - Euro std) |
| 01 h | Katakana - Japanese |
| 02 h | PC850 (Multilingual) |
| 03 h | PC860 (Portuguese) |
| 04 h | PC863 (Canadian-French) |
| 05 h | PC865 (Nordic) |
| 10 h | WPC1252 |
| 11 h | PC866 (Cyrillic \#2) |
| 12 h | PC852 (Latin 2) |
| 13 h | PC858 |

### 7.1.16 US MD1 (Over-write mode)

Code: 1Fh 01h
Function: Display mode set to Over-write mode.
This command has effect for the currently-selected window.

### 7.1.17 US MD2 (Vertical scroll mode)

Code: 1Fh 02h
Function: Display mode set to Vertical scroll mode.
This command has effect for the currently-selected window.

### 7.1.18 US MD3 (Horizontal scroll mode)

## Code: 1Fh 03h

Function: Display mode set to Horizontal scroll mode.
This command has effect for the currently-selected window.

### 7.1.19 US s n (Horizontal scroll speed)

Code: 1Fh 73h n
Definable area: $\quad 00 \leq n \leq 1$ Fh
Default: $\mathrm{n}=00 \mathrm{~h}$
Function: Set speed for Horizontal scroll mode.
Scroll speed is set by ' $n$ '.
Subsequent commands are not processed until scroll is completed.

Scroll base time period ' $T$ ' depends on screen mode and character size, etc.

| $\mathbf{n}$ | Speed |
| :---: | :---: |
| 00 h | Instantaneous |
| 01 h | $\mathrm{~T} \mathrm{~ms} / 2$ dots |
| $02 \mathrm{~h}-1 \mathrm{Fh}$ | $(\mathrm{n}-1) \times \mathrm{T} \mathrm{ms} / \mathrm{dot}$ |

### 7.1.20 US rn (Reverse display)

## Code: 1Fh 72h n

n: Reverse display ON/OFF
Definable area: $\quad 00 \mathrm{~h} \leq \mathrm{n} \leq 01 \mathrm{~h}$
$\mathrm{n}=00 \mathrm{~h}$ : Reverse OFF
$\mathrm{n}=01 \mathrm{~h}$ : Reverse ON
Default: $\mathrm{n}=00 \mathrm{~h}$
Function: Reverse display ON/OFF for character and image display.
Changing this setting only affects subsequent data. Content already displayed is not affected.

### 7.1.21 US w n (Write mixture display mode)

Code: 1Fh 77h n
n : Display write mode
Definable area: $\quad 00 \mathrm{~h} \leq \mathrm{n} \leq 03 \mathrm{~h}$
$\mathrm{n}=00 \mathrm{~h}$ : Normal display write (not mixture display)
$\mathrm{n}=01 \mathrm{~h}$ : OR display write
$\mathrm{n}=02 \mathrm{~h}$ : AND display write
$\mathrm{n}=03 \mathrm{~h}$ : EX-OR display write
Default: $\mathrm{n}=00 \mathrm{~h}$
Function: Specifies write mixture mode.
Newly-written characters and images are combined with current display contents in Display Memory.

### 7.1.22 US X $n \quad$ (Brightness level setting)

Code: 1Fh 58h n
n : Brightness level setting
Definable area: $\quad 00 \mathrm{~h} \leq \mathrm{n} \leq 08 \mathrm{~h}$
Default: $\mathrm{n}=08 \mathrm{~h}$
Function: Set display brightness level.
n : Level
01h: 12.5\% 02h: 25\%
03h: 37.5\% 04h: 50\%
05h: 62.5\% 06h: 75\%
07h: 87.5\% 08h: 100\%

### 7.1.23 US ( a n [parameter] (Display action command group)

Function: Execute processing of display action command.

| $\mathbf{n}$ | Function No. | Function |
| :---: | :---: | :---: |
| 01 h | Function 01h | Wait |
| 10 h | Function 10h | Scroll display action |
| 11 h | Function 11h | Blink display action |
| 40 h | Function 40h | Screen saver |

n : Function code.
Subsequent commands are not processed until display action processing is completed.

```
7.1.24 <Function 01h> US (a 01h t (Wait)
Code: 1Fh 28h 61h 01h t
    t: Wait time
    Definable area: }00\textrm{h}\leq\textrm{t}\leq\textrm{FFh
    Function: Waits for the specified time (command and data processing is stopped).
    Wait time = t }\times\mathrm{ approximately 0.5s
```

### 7.1.25 <Function 10h> US (a 10h wL wH cL cH s

## (Scroll display action)

## Code: $\quad 1 \mathrm{Fh} 28 \mathrm{~h} 61 \mathrm{~h} 10 \mathrm{~h} \mathbf{w} \mathbf{w H} \mathrm{cL} \mathrm{cH}$ s

$w L: \quad$ Display screen shift byte count, lower byte
wH : Display screen shift byte count, upper byte
cL: Number of cycles, lower byte
cH: $\quad$ Number of cycles, upper byte
s: Scroll speed
Definable area: $\quad 0000 \mathrm{~h} \leq(w L+w H \times 100 h) \leq 03 F F h$
$0001 \mathrm{~h} \leq(\mathrm{cL}+\mathrm{cH} \times 100 \mathrm{~h}) \leq$ FFFFh
$00 \mathrm{~h} \leq \mathrm{s} \leq \mathrm{FFh}$
Function: Shift the display screen.
Horizontal scrolling is possible by specifying as the shift byte count a multiple of (Display screen 'y' dot /8). Display switching is possible by specifying shift byte count as (Display screen ' $x$ ' dot $\times$ Display screen ' $y$ ' dot /8). Scroll speed is specified by ' $s$ '.
Scroll speed: s $\times 14 \mathrm{~ms}$ (approximately) / shift

For example: 1 dot scroll to the left: $w L=02 h, w H=00 h$

### 7.1.26 <Function 11h> US (a 11h pt1 t2 c

## Code: 1Fh 28h 61h 11h p t1 t2 c

p: Blink pattern
t1: $\quad$ Normal display time
t2: $\quad$ Blank or reverse display time
C: Number of cycles
Definable area: $\quad 00 \mathrm{~h} \leq \mathrm{p} \leq 02 \mathrm{~h}$
$p=00 h$ : Normal display.
p = 01h: Blink display (alternately Normal and Blank display).
$p=02 h$ : Blink display (alternately Normal and Reverse display).
$01 \mathrm{~h} \leq \mathrm{t} 1 \leq \mathrm{FFh}$
$01 \mathrm{~h} \leq \mathrm{t} 2 \leq \mathrm{FFh}$
$00 \mathrm{~h} \leq \mathrm{c} \leq \mathrm{FFh}$
Function: Blink display action Blink pattern specified by ' $p$ '.
Time is specified by 't1' and 't2'
A: t1 $\times 14 \mathrm{~ms}$ (approximately) Normal display
B: t2 $\times 14 \mathrm{~ms}$ (approximately) Blank or Reverse display
Repeated 'c' times.

This command does not affect Display Memory.
$\mathrm{C}=00 \mathrm{~h}$ : Blink continues during subsequent command and data processing, until $\mathrm{C}=01 \mathrm{~h}-\mathrm{FFh}$ is set, or Initialize command.
$\mathrm{c}=01 \mathrm{~h}$ - FFh: Blink display is repeated $1-255$ times while command and data processing is stopped. After display blinking is completed, Normal display returns and command and data processing resumes. Command / data processing does not resume until operation is completed.

### 7.1.27 <Function 40h> US ( a 40h p (Screen saver)

## Code: 1Fh 28h 61h 40h p

p: Screen saver mode
Definable area: $\quad 00 \mathrm{~h} \leq \mathrm{p} \leq 04 \mathrm{~h}$
$p=00 h$ : Display power OFF (Power save mode)
$p=01 \mathrm{~h}$ : Display power ON
$p=02 h$ : All dot OFF
$p=03 \mathrm{~h}$ : All dot ON
$\mathrm{p}=04 \mathrm{~h}$ : Repeat blink display with normal and Reverse display
(Normal: 2s, Reverse: 2s)

Function: Control Power ON or OFF, and Start Screen saver mode.
$p=00 h-01 \mathrm{~h}$ : Control Power ON or OFF. This setting is applied until this command is re-specified. $p=02 h-04 h$ : Start Screen saver mode. This setting is cancelled when next data is input.

### 7.1.28 US ( f n [parameter] <br> (Bit image display group)

Function: Display bit image data.

| $\mathbf{n}$ | Function No. | Function |
| :---: | :---: | :---: |
| 11 h | Function 11h | Real-time bit image display |

$\mathrm{n}: \quad$ Function code.

### 7.1.29 <Function $11 \mathrm{~h}>$ US ( $\mathrm{f} 11 \mathrm{n} \mathrm{xL} \mathrm{xH} \mathrm{yL} \mathrm{yH} \mathrm{g} \mathrm{d}(1)$...d(k)

(Real-time bit image

## display)

Code: 1Fh 28h 66h 11h xL xH yL yH g d(1)...d(k)
$\mathrm{xL}: \quad$ Bit image X size, lower byte (by 1 dot$)$
$\mathrm{xH}: \quad$ Bit image X size, upper byte (by 1 dot)
yL: $\quad$ Bit image $Y$ size, lower byte (by 8 dots)
yH: $\quad$ Bit image Y size, upper byte (by 8 dots)
g: $\quad$ Image information = 1 (fixed)
$\mathrm{d}(1)-\mathrm{d}(\mathrm{k})$ : Bit Image data (see below)
Definable area: $\quad 0001 \mathrm{~h} \leq(x L+x H \times 100 \mathrm{~h}) \leq 0200 \mathrm{~h}$ $0001 \mathrm{~h} \leq(\mathrm{yL}+\mathrm{yH} \times 100 \mathrm{~h}) \leq 0002 \mathrm{~h}$
$\mathrm{g}=01 \mathrm{~h}$
$\mathrm{k}=\mathrm{x} \times \mathrm{y} \times \mathrm{g}$
$00 h \leq \mathrm{d} \leq \mathrm{FFh}$
Function: Display the bit image data at the cursor position in real-time.
Cursor position does not change.
If bit image exceeds the bounds of the current window, only the portion within the currently-selected window is displayed.
If Display position or display size etc, are outside the definable area, the command is cancelled at the point where the error is detected, and the remaining data is treated as standard data.

### 7.1.30 US ( d n [parameter] (Dot unit command group)

Function: Dot unit display bit image data or character.

| $\mathbf{n}$ | Function No. | Function |
| :---: | :---: | :--- |
| 20 h | Function 20h | Dot unit downloaded bit image display |
| 21 h | Function 21h | Dot unit real-time bit image display |
| 30 h | Function 30h | Dot unit character display |

n: Function code.
7.1.31 <Function 20h> US (d 20h xPL xPH yPL yPH maL aH aE ySL ySH xOL xOH yOL yOH xL xH yL yHg g (Dot unit downloaded bit image display)

Code: 1Fh 28 h 64h 20 h xPL xPH yPL yPH maL aH aE ySL ySH xOL xOH yOL yOH xL xH yL yH g
xPL: Display position $x$, lower byte (by 1 dot)
xPH: Display position $x$, upper byte (by 1 dot)
yPL: $\quad$ Display position $y$, lower byte (by 1 dot)
yPH: $\quad$ Display position y, upper byte (by 1 dot)
m : Image data display memory select
$\mathrm{aL}: \quad$ Bit image data definition address, lower byte
$\mathrm{aH}: \quad$ Bit image data definition address, upper byte
$\mathrm{aE}: \quad$ Bit image data definition address, extension byte
ySL: $\quad$ Bit image defined, Y size, lower byte (by 8 dots)
ySH: $\quad$ Bit image defined, $Y$ size, upper byte (by 8 dots)
$x O L$ : Image data offset $x$, lower byte (by 1 dot)
xOH : Image data offset x , upper byte (by 1 dot)
yOL: Image data offset $y$, lower byte (by 1 dot)
$\mathrm{yOH}: \quad$ Image data offset y , upper byte (by 1 dot)
xL: $\quad$ Bit image display $X$ size, lower byte (by 1 dot)
xH : $\quad$ Bit image display X size, upper byte (by 1 dot)
$y \mathrm{~L}: \quad \quad$ Bit image display $Y$ size, lower byte (by 1 dot)
$\mathrm{yH}: \quad$ Bit image display Y size, upper byte (by 1 dot)
g: $\quad$ Image information $=1$ (fixed)
Definable area: $\quad 0000 \mathrm{~h} \leq(x P L+x P H \times 100 h) \leq 01 F F h$
$0000 \mathrm{~h} \leq(\mathrm{yPL}+\mathrm{yPH} \times 100 \mathrm{~h}) \leq 000 \mathrm{Fh}$
$m=02 h$ : Display Memory bit image

## Display Memory bit image

$(a L+a H \times 100 h+a E \times 10000 h)=000000 h$
$(y S L+y S H \times 100 h)=0000 h$
$0000 \mathrm{~h} \leq(x \mathrm{OL}+\mathrm{xOH} \times 100 \mathrm{~h}) \leq 01 \mathrm{FFh}$
$0000 \mathrm{~h} \leq(\mathrm{yOL}+\mathrm{yOH} \times 100 \mathrm{~h}) \leq 000 \mathrm{Fh}$
$0001 \mathrm{~h} \leq(x L+x H \times 100 h) \leq 0200 h$
$0001 \mathrm{~h} \leq(\mathrm{yL}+\mathrm{yH} \times 100 \mathrm{~h}) \leq 0010 \mathrm{~h}$

[^0]
## real-time bit image display)

Code: 1Fh 28h 64h 21h xPL xPH yPL yPH xL xH yL yH g d(1)...d(k)
$x P L: \quad$ Display position $x$, lower byte (by 1 dot)
xPH: Display position $x$, upper byte (by 1 dot)
yPL: Display position y, lower byte (by 1 dot)
yPH: Display position y , upper byte (by 1 dot)
$\mathrm{xL}: \quad$ Bit image display X size, lower byte (by 1 dot)
$\mathrm{xH}: \quad$ Bit image display X size, upper byte (by 1 dot)
yL: $\quad$ Bit image display Y size, lower byte (by 1 dot)
yH: $\quad$ Bit image display Y size, upper byte (by 1 dot)
$\mathrm{g}: \quad$ Display information $=1$ (fixed)
$\mathrm{d}(1)-\mathrm{d}(\mathrm{k})$ : Bit image data (see below)
Definable area: $\quad 0000 \mathrm{~h} \leq(x P L+x P H \times 100 \mathrm{~h}) \leq 01 \mathrm{FFh}$
$0000 \mathrm{~h} \leq(\mathrm{yPL}+\mathrm{yPH} \times 100 \mathrm{~h}) \leq 000 \mathrm{Fh}$
$0001 \mathrm{~h} \leq(\mathrm{xL}+\mathrm{xH} \times 100 \mathrm{~h}) \leq 0200 \mathrm{~h}$
$0001 \mathrm{~h} \leq(\mathrm{yL}+\mathrm{yH} \times 100 \mathrm{~h}) \leq 0010 \mathrm{~h}$
$\mathrm{g}=01 \mathrm{~h}$
$00 h \leq d \leq F F h$
Function: Display the bit image data at the specified ( $x, y$ ) position in real-time.
Display position and display size are specified in units of 1 dot.
If bit image exceeds the bounds of the current window, only the portion within the currently-selected window is displayed.
If Display position or display size are outside the definable area, the command is cancelled at the point where the error is detected, and the remaining data is treated as standard data.

Example: $x P=2, y P=1$, Display size $x=8, y=14$
Image data

| b7 | d1 | d3 | d5 |  | d7 | d9 | d11 | d13 | d15 |

Display Memory

### 7.1.33 <Function 30h> US ( d 30h xPL xPH yPL yPH m bLen d(1)...d(bLen)

(Dot unit character display)

Code: 1Fh 28h 64h 30h xPL xPH yPL yPH m bLen d(1)...d(bLen)
$x P L$ : Display position $x$, lower byte (by 1 dot)
xPH: Display position $x$, upper byte (by 1 dot)
yPL: Display position y, lower byte (by 1 dot)
yPH: $\quad$ Display position y , upper byte (by 1 dot)
m:
bLen: Character data length
d(1)-d(bLen): Character data / reverse select
Definable area: $\quad 0000 \mathrm{~h} \leq(x \mathrm{PL}+\mathrm{xPH} \times 100 \mathrm{~h}) \leq 01 \mathrm{FFh}$, FFFFh
$0000 \mathrm{~h} \leq(\mathrm{yPL}+\mathrm{yPH} \times 100 \mathrm{~h}) \leq 000 \mathrm{Fh}$
$\mathrm{m}=00 \mathrm{~h}$
$00 \mathrm{~h} \leq \mathrm{bLen} \leq \mathrm{FFh}$
$00 \mathrm{~h} \leq \mathrm{d} \leq \mathrm{FFh}$
d=10h: Reverse OFF
$\mathrm{d}=11 \mathrm{~h}$ : Reverse ON
Function: Display the specified text characters at the specified ( $\mathrm{x}, \mathrm{y}$ ) position.
Display position is specified in units of 1 dot.
For display position $\mathrm{xP}=\mathrm{FFFFh}$, write position continues from previous writes done using this command.
The current settings for character size and table type, etc are used.
Character magnification and bold settings are not used.
If character display exceeds the bounds of the current window, only the portion within the currently-selected window is displayed.
If Display position is outside the definable area, the command is cancelled at the point where the error is detected, and the remaining data is treated as standard data.
Example: Display position $\mathrm{xP}=2, \mathrm{yP}=3,6 \times 8$ dot character " AB "
Display Memory

### 7.1.34 US ( g n [parameter] <br> (Font command group)

Function: Font Width and Font Magnification settings.

| $\mathbf{n}$ | Function No. | Function |
| :---: | :---: | :---: |
| 03 h | Function 03h | Font Width |
| 40 h | Function 40h | Font Magnification |

n: Function code.

### 7.1.35 <Function 03h> US ( g 03h w

(Font Width)
Code: 1Fh 28h 67h 03h w
w: Font width setting
Definable area: $\quad 00 \mathrm{~h} \leq \mathrm{w} \leq 03 \mathrm{~h}$
$\mathrm{w}=00 \mathrm{~h}$ : Fixed character width 1 ( 1 dot space on right side)
$\mathrm{w}=01 \mathrm{~h}$ : Fixed character width 2 ( 1 dot space on right side and left side)
$\mathrm{w}=02 \mathrm{~h}$ : Proportional character width 1 ( 1 dot space on right side)
$\mathrm{w}=03 \mathrm{~h}$ : Proportional character width 2 ( 1 dot space on right side and left side)
Default: w=01h
Function: Sets the character width.
Fixed character width 1 \& 2: Character is written with fixed character width (6 or 7 dot).
Proportional character width: Character is written with proportioned character width.

### 7.1.36 <Function 40h> US ( g 40h x y (Font Magnification)

Code: $\quad 1 F h 28 \mathrm{~h} 67 \mathrm{~h} 40 \mathrm{~h} x \mathrm{y}$
$\mathrm{x}: \quad \mathrm{X}$ magnification factor
$\mathrm{y}: \quad \mathrm{Y}$ magnification factor
Definable area: $01 \mathrm{~h} \leq x \leq 04 h$
$01 \mathrm{~h} \leq \mathrm{y} \leq 02 \mathrm{~h}$
Default: $x=01 \mathrm{~h}$
$y=01 \mathrm{~h}$
Function: Set character magnification ' $x$ ' times to the right and ' $y$ ' times downward.
Character magnification includes the space specified by Font Width command.

$(x=2, y=2)$

### 7.1.37 US ( w n [parameter] (Window command group)

Function: Window / screen commands

| $\mathbf{n}$ | Function No. | Function |
| :---: | :---: | :---: |
| 01 h | Function 01h | Current window select |
| 02 h | Function 02h | User-Window definition and cancel |
| 10 h | Function 10h | Write screen mode select |

n : Function code.

### 7.1.38 <Function 01h> US (w 01h a <br> (Window select)

Code: 1Fh 28h 77h 01h a
a: Window number

$$
\begin{array}{ll}
\mathrm{a}=00 \mathrm{~h}: & \text { Base-Window } \\
\mathrm{a}=01 \mathrm{~h}-04 \mathrm{~h}: & \text { User-Window }
\end{array}
$$

Definable area: $\quad 00 \mathrm{~h} \leq \mathrm{a} \leq 04 \mathrm{~h}$
Function: Select current window.
Command is ignored if Window number is for a User-Window that is not defined.

### 7.1.39 <Function 02h> US ( w 02h a b[xPL xPH yPL yPH xSL xSH ySL ySH] (User Window define / cancel)

Code: 1Fh 28h 77h 02h a b [xPL xPH yPL yPH xSL xSH ySL ySH]
a: Definable window No. No.1-4
b: Define or Cancel $\quad b=00 h$ : Cancel, $b=01 h:$ Define
xPL: Left position of window $x$, lower byte (by 1 dot)
xPH: Left position of window $x$, upper byte (by 1 dot)
yPL: $\quad$ Top position of window $y$, lower byte (by 8 dot)
yPH: Top position of window y , upper byte (by 8 dot)
xSL: $\quad X$ size of window, lower byte (by 1 dot)
xSH : $\quad \mathrm{X}$ size of window, upper byte (by 1 dot)
ySL: $\quad Y$ size of window, lower byte (by 8 dot)
ySH: $\quad$ Y size of window, upper byte (by 8 dot)
Definable area: $\quad 01 \mathrm{~h} \leq \mathrm{a} \leq 04 \mathrm{~h}$
$00 h \leq b \leq 01 h$
$0000 \mathrm{~h} \leq(x P L+x P H \times 100 h) \leq 01 F F h$
$0000 \mathrm{~h} \leq(\mathrm{yPL}+\mathrm{yPH} \times 100 \mathrm{~h}) \leq 0001 \mathrm{~h}$
$0001 \mathrm{~h} \leq(x S L+x S H \times 100 h) \leq(0200 h-(x P L+x P H \times 100 h))$
$0001 \mathrm{~h} \leq(\mathrm{ySL}+\mathrm{ySH} \times 100 \mathrm{~h}) \leq(0002 \mathrm{~h}-(\mathrm{yPL}+\mathrm{yPH} \times 100 \mathrm{~h}))$
Function: Define or cancel User-Window
Display contents are not changed by this command.
User-Window define ( $b=01 \mathrm{~h}$ ):
Specify User-Window number, window position, and window size. Window position and Window size are specified in units of one block ( $1 \times 8$ dot).

Up to 4 User-Windows can be defined.
The cursor position for the window is initialized to top left $(X=0, Y=0)$.

User-Window cancel ( $b=00 h$ ):
For User-Window cancel, window range parameters [xPL - ySH] are not used.
If the currently-selected window is cancelled, the Base-Window becomes the currently-selected window.

If any of ' $a$ ', ' $b$ ', ' $x P$ ', ' $y P$ ', ' $x S$ ', or ' $y S$ ' are outside the definable area, the command is cancelled at that point and the following data is treated as standard data.

### 7.1.40 <Function 10h> US ( w 10h a (Write screen mode select)

Code: 1Fh 28h 77h 10h a
a: Write screen mode
$\mathrm{a}=00 \mathrm{~h}$ : Display screen mode
$\mathrm{a}=01 \mathrm{~h}$ : All screen mode
Definable area: $00 h \leq a \leq 01 h$
Default: $a=00 h$
Function: Select the write screen mode. This setting is only applicable for Base-Window.
Display screen mode: Display action is valid within area of either Display area or Hidden area, depending on cursor position.
All screen mode: Display action is valid over the entire display memory.
For details, refer to 6.4 Write screen mode.

### 7.1.41 WINx (Window select shortcut)

Function: Select current window (1-byte command).
Refer to 7.1.38 for more detail.

| WINx | Function |
| :---: | :--- |
| WIN0 (10h) | Select Base-Window |
| WIN1 (11h) | Select User-Window 1 |
| WIN2 (12h) | Select User-Window 2 |
| WIN3 (13h) | Select User-Window 3 |
| WIN4 (14h) | Select User-Window 4 |

### 7.2 Bit image data format

The Bit image consists of the data for image size ( $x \times y$ ) as follows;

| Data | Pattern position |
| :---: | :---: |
| $\mathrm{d}(1)$ | $P 1$ |
| $\mathrm{~d}(2)$ | P 2 |
|  |  |
| $\mathrm{~d}(\mathrm{x} \times \mathrm{y})$ | $P(x \times y)$ |

## 8 Setup

### 8.1 Jumper

| No. | Function | Default |
| :---: | :---: | :---: |
| J0 | Baud Rate select | OPEN |
| J1 |  |  |
| J2 | Reserved (do not change) | OPEN |
| J3 |  |  |
| JRB | Parallel interface through-holes <br> Pin \#3 signal setting | OPEN |

Note: "BT" is for factory use only.

### 8.1.1 Baud rate setting (for serial interface)

| J0 | J1 | Baud rate |
| :---: | :---: | :---: |
| OPEN | OPEN | $38,400 \mathrm{bps}$ |
| SHORT | OPEN | $19,200 \mathrm{bps}$ |
| OPEN | SHORT | $9,600 \mathrm{bps}$ |
| SHORT | SHORT | $115,200 \mathrm{bps}$ |

### 8.1.2 Parallel interface through-holes Pin \#3 signal setting

| JRB | Signal of Pin\#3 |
| :---: | :---: |
| OPEN | NC |
| C-R SHORT | /RESET (Input) |
| C-B SHORT | PBUSY (Output) |
| R-C-B SHORT | Do not use. |

## 9 Connector

### 9.1 Parallel interface 14 through-holes (CN3)

| Pin <br> No. | Signal <br> name | Function | Direction | Pin <br> No. | Signal name | Function | Direction |
| :---: | :---: | :--- | :---: | :---: | :---: | :---: | :---: |
| 1 | GND | Ground | Input | 8 | D1 | Data input | Input/output |
| 2 | V $_{\text {CC }}$ | Power supply | Input | 9 | D2 | Data input | Input/output |
| 3 | NC *1 | No connection | - | 10 | D3 | Data input | Input/output |
| 4 | RS *2 | Switch signal | Input | 11 | D4 | Data input | Input/output |
| 5 | WR | Data write | Input | 12 | D5 | Data input | Input/output |
| 6 | /RD | Data read | Input | 13 | D6 | Data input | Input/output |
| 7 | D0 | Data input | Input/output | 14 | D7(PBUSY) | Data input | Input/output |

* 1: Pin \#3 can be changed to /RESET or PBUSY terminal, selected by jumper.
* 2: Factory use only.

### 9.2 Serial interface 7 through-holes (CN2)

| Pin No. | Signal name | Function | Direction |
| :---: | :---: | :---: | :---: |
| 1 | $\mathrm{~V}_{\mathrm{CC}}$ | Power supply | Input |
| 2 | SIN | Data receive | Input |
| 3 | GND | Ground | Input |
| 4 | SBUSY | Display busy | Output |
| 5 | NC | No connection | - |
| 6 | RESET | Reset | Input |
| 7 | NC | No connection | - |

## 10 Firmware Version Notation

The firmware version is written in the following position.
Soldering Side

DS-1711-0100-00

## Notice for the Cautious Handling of VFD Modules

Handling and Usage Precautions:
Please carefully follow the appropriate product application notes and operation standards for proper usage, safe handling, and maximum performance.
[VFD tubes are made of glass]

- The edges of the VFD glass envelope are not smooth, so it is necessary to handle carefully to avoid injuries to hands.
- Use caution to avoid breaking the VFD glass envelope, to prevent injury from sharp glass particles.
- The tip of the exhaust pipe is fragile so avoid shock from impact.
- It is recommended to allow sufficient open space surrounding the exhaust pipe to avoid possible damage.
- Please design the PCB for the VFD module within 0.3 mm warping tolerance to avoid any forces that may damage the display due to PCB distortion causing a breakdown of the electrical circuit leading to VFD failure.
[High voltage]
- Avoid touching conductive electrical parts, because the VFD module uses high voltage exceeding 30-100 volts.
- Even when electric power is turned off, it may take more than one minute for the electrical current to discharge.
[Cable connection]
- Do not unplug the power and/or data cables of VFD modules during operation, because unrecoverable damage may result.
- $\quad$ Sending input signals to the VFD module when not powered can cause I/O port damage.
- It is recommended to use a 30 cm or shorter signal cable to prevent functional failures
[Electrostatic charge]
- VFD modules need electrostatic-free packaging and protection from electrostatic charges during handling and usage.
[Structure]
- During operation, VFD and VFD modules generate heat. Please consider sufficient heat radiation dissipation using heat sink solutions.
- Preferably, use UL-grade materials or components in conjunction with VFD modules.
- Warp and twist movement causes stress and may break VFDs and VFD modules. Please adhere to allowances within 0.3 mm at the point of attachment.
[Power]
- Apply regulated power to the VFD module within specified voltages to protect from failures.
- VFD modules may draw in-rush current exceeding twice the typical current at power-on, so a power supply with sufficient capacity and quick starting of the power regulator is recommended.
- VFD module needs a specified voltage at the point of connection. Please use an adequate power cable to avoid a decrease in voltage. As a safety measure, a fuse or other over-current protection is recommended.
[Operating consideration]
- Illuminating phosphor will decrease in brightness during extended operation. If a fixed pattern illuminates for an extended period (several hours), the phosphor efficiency will decrease compared to the non-operating phosphor, causing non-uniform brightness. Please consider programming the display patterns to use all phosphor segments evenly. Scrolling may be a consideration for a period of time to refresh the phosphor condition and improve even illumination of the pixels.
- A signal cable 30 cm or less is recommended to avoid possible disturbances to the signal.
[Storage and operating environment]
- Please use VFD modules under the recommended specified environmental conditions. Salty, sulfuric and dusty environments may damage the VFD module even during storage.

## [Disposal]

- VFD uses lead-containing materials (RoHS directive exempts these lead compounds in the glass for electronic devices). When discarding VFDs or VFD modules, please adhere to applicable laws and regulations.
[Other cautions]
- Although the VFD module is designed to be protected from electrical noise, please plan your circuitry to exclude as much noise as possible.
- Do not reconstruct or repair the VFD module without our authorization. We cannot assure the quality or reliability of unauthorized reconstructed VFD modules.

Notice:

- We do not authorize the use of any patents that may be inherent in these specifications.
- Neither whole nor partial copying of these specifications is permitted without our approval. If necessary, please ask for assistance from our sales consultant.
- This product is not designed for military, aerospace, medical or other life-critical applications. If you choose to use this product for these applications, please ask us for prior consultation or we cannot accept responsibility for problems that may occur.

## Revision Note

[^0]:    Function: Display the bit image defined in Display Memory at the specified ( $\mathrm{x}, \mathrm{y}$ ) position. Display position, display size, and image data offset are specified in unit of 1 dot. If bit image exceeds the bounds of the current window, only the portion within the curre ntly-selected window is displayed.
    If Display position or image size, etc are outside the definable area, the command is cancelled at the point where the error is detected, and the remaining data is teated as standard data.
