### Pegler Yorkshire Kuterlite Guarantee - Terms and Conditions

Products are subject to a guarantee that is between Pegler Yorkshire and the final purchaser of the product. When correctly assembled with the stated tubes and pipe the length of guarantee is as follows:

Kuterlite fittings and valves installed with specified tubes and pipes with the exception of those listed below - 25 years.

Kuterlite Flexifit flexible connectors - 10 years

Kuterlite 600/900 fittings and valves installed with XPress Carbon Steel System tube in sizes up to 28mm - 10 years

Kuterlite 600/900 fittings and valves installed with other manufacturers carbon steel tube to DIN 2394/NEN 1982 in sizes up to 28mm - 5 years

The guarantee is subject to proof of purchase being supplied.

This guarantee does not affect any statutory rights the consumer may have in law.

The guarantee covers manufacturing or material defects when installed in accordance with our instructions on specified tube materials and applications, and does not cover parts subject to normal wear and tear.

This product range has been designed for the use of homeowners, domestic and commercial applications and therefore the Guarantee is subject to the product being properly selected for their intended service conditions.

The guarantee is not applicable where the product is fitted contrary to the conditions in the fitting instructions.

This is reinforced where valves are covered by the European Pressure Equipment Directive (PED97/23/EC) where Installation, Operating and Maintenance Instructions are supplied with each product and/or carton.

Provided it is installed correctly and receives adequate preventative maintenance it should give years of trouble–free service.

Abusive behaviour and accidental damage to the product are not covered by this guarantee.

The extent of this liability is limited to the cost of the replacement of the defective item and not to installation or consequential damages.

Size	-15°C (Min)	30°C	90°C	120°C (Max)
6mm to 10mm	70 bar*	70 bar	40 bar	25 bar
12mm to 28mm	20 bar*	20 bar	10 bar	7 bar
35mm to 54mm	16 bar*	16 bar	7 bar	5 bar

#### Care

No regular aesthetic care is required for this product

### Maintenance

No regular maintenance is required for this product.

For any further help please contact the Service Support Team on: 0800 1560050.

# Installation instructions Kuterlite 600/900

### INSTALLATION TIPS

- 1. Ensure the jointing surfaces and threads remain clean and free from grit.
- If there is a slight weep from the joint, this will be readily corrected by the application of PTFE tape or a smear of an approved jointing compound to the sealing faces.
- 3. For advice on avoidance of stress corrosion cracking see page 19.
- 4. A few drops of light oil on the threads will assist the joint making operation, particularly for sizes 35mm and above.
- More torque is required to tighten the compression nuts of 42mm and 54mm fittings, so spanners no shorter than 750mm (30") should be used.

### TAKING APART AND REMAKING KUTERLITE JOINTS

Kuterlite fittings can be easily dismantled and remade without the loss of joint efficiency, providing the components are kept clean and undamaged. No sealing compound is usually needed to remake a Kuterlite joint, but care should be taken not to trap particles of foreign matter when reassembling. When re-tightening the coupling nut use just enough torque to "nip" the ring. Do not over tighten. Kuterlite fittings can replace union fittings where an infrequent disconnection facility is required.

The following instructions illustrate just how easy it is to make a Kuterlite joint. These cover Kuterlite 600, Kuterlite 900 and waste fittings in sizes up to and including 54mm. Details of how to joint large size Kuterlite 900 fittings can be found on page 4.

### **Preliminaries**

Select the correct size of tube and fitting for the job. Ensure that both are clean, in good condition and free from damage and imperfections. If the tube is oval or damaged, use a re-rounding tool.

Copper tube should be of half-hard (R250) or hard (R290) temper. Annealed soft temper tube (R220) may be jointed using Kuterlite fittings.

### **Preparation**

**1.** Cut the tube square using a rotary tube cutter wherever possible. If a hacksaw is used to cut the tube, a fine toothed blade should be used.

**2.** Remove any burr from the inside and outside of the tube ends using a fine toothed file or a S120 deburring tool from the XPress accessories range.

### Jointing copper tube

There are two methods of assembling a Kuterlite joint.

**1a.** Insert the tube firmly into the compression fitting, ensuring that the compression ring seats centrally and that the tube makes firm contact with the tube stop in the body of the fitting.

**1b.** Remove the compression nut and compression ring, then put the nut and then the ring on the tube. Insert the tube end up to the fitting's tube stop. Slide the ring and the nut down to the fitting body.

2. Tighten the nut using your fingers until tight.

3. Tighten the nut further using high quality open ended or adjustable spanners. Spanner flats are incorporated into the design of Kuterlite fitting bodies. The second spanner must be used to prevent the fitting rotating as the nut is tightened. For normal joint making, tighten the nut 1 turn  $(360^{\circ})$  for fittings in sizes from 6mm to 12mm, or 3/4 turn (270°) for fittings in sizes from 15mm to 54mm. A few drops of light oil on the threads will assist, especially on sizes 35mm and above. When jointing stainless steel or R220 copper tube some variation may be needed - the nut may be tightened further if necessary. Take care not to over tighten the compression nut, as this will not result in a stronger joint and could lead to problems in service.

# Installation instructions Kuterlite 600/900

# Jointing half-hard thick walled R250 copper tube

This copper tube is significantly thicker than other varieties – refer to Table 1 on page 8 for specifications. Special care needs to be taken during installation. Follow steps one to three opposite, but with the following additional precautions:

- 1. Ensure pipework is supported during and after installation, as thick-walled copper tube is less tolerant of stress on the joints. The pipework should be clipped as close as possible to the fittings, particularly where long runs are involved.
- 2. Use spanners of the correct size and length. More torque is required to tighten Kuterlite fittings with thick walled copper tube, and care should be taken to ensure neighbouring joints are not disturbed.
- **3.** Apply a light oil to the threads and chamfers where possible. This will reduce assembly torque and minimise the risk of damage. This is essential on sizes above 28mm.
- 4. If a sealant is required, use a suitable PTFE based compound, eg Loctite 577 or PTFE tape.

### Jointing imperial copper tube

Selected Kuterlite 600 and Kuterlite 900 fittings can be used in maintenance applications to connect copper tube to former imperial sizes, such as BS 3931. For 3/8" use 12mm, 1/2" use 15mm, 1" use

28mm, 2" use 54mm, 2½" use 67mm. For other Kuterlite sizes up to and including 42mm, the use of an imperial by metric adaptor ring (K978C) will convert any metric compression fitting to be used with imperial tube. A K910IM can be used to convert sizes 22mm, 76mm and 108mm.

### Jointing PEX and PB pipe

Part 2 can be jointed using Kuterlite 600 or Kuterlite 900 fittings in sizes up to 28mm. To achieve sound joints, ensure the pipe is cut square, and is not damaged or scored in any way. The correct sized pipe support liner must be fully inserted into the PEX or PB pipe before jointing commences. Use the appropriate liner as recommended by the pipe manufacturer.

# Jointing carbon steel and stainless steel tube

XPress Stainless System tube or other stainless steel tube to BS EN 10312 (formerly BS 4127), DVGW GW541; and XPress Carbon steel System tube or other carbon steel tube to DIN 2394/ NEN 1982, can be jointed in sizes up to and including 28mm using Kuterlite 600 or Kuterlite 900 compression fittings. Carbon steel tubes are for use on non potable closed circuit systems only. To achieve sound joints, the following precautions should be taken:

- **1.** Ensure no flats or score marks are visible on the outside surface of the tube. The weld bead should not be visible.
- **2.** A suitable jointing compound should be applied to the sealing faces prior to tightening of the compression nuts. Sealants with PTFE fillers are preferred, with PTFE tape as an alternative.

### SYSTEM TESTING

We recommend all systems are thoroughly tested upon completion. In hydraulic based installations the system may be tested to 1.5 times the working pressure of the system (see tables on page 9 for data). If higher test pressures are required advice should be sought from Yorkshire Fittings.

On completion, compressed air pipeline systems must be properly tested. The system designer and installation contractor must ensure safe methods are selected for system testing which will comply with all current Health and Safety regulations.

This may include testing compressed air lines with fluids or compressed air at a limited pressure, or a combination. In any event we do not recommend the maximum working pressure of the product be exceeded during this procedure.

N.B. The maximum temperature and pressure range in any system is dictated by the component with the lowest performance rating.

### THREADED CONNECTORS

**Kuterlite threaded connectors** have taper male or parallel female BSP threads, and the most popular sizes have parallel male BSP threads. These are for jointing pipework to boilers, pumps or backplate elbows. For taper male threads, a small amount of inert jointing compound or PTFE tape should be applied before installation. When installing parallel male threads, for example to cisterns and cylinders, a good quality jointing washer should be used.

# Installation underground and using reducers

# JOINTING CHROME PLATED COPPER TUBE

Kuterlite chrome plated fittings can be used on chrome plated copper tube without the need for any additional preparation.

Assemble the joint in the usual way – refer to instructions on page 14.

### TYPE A & B FITTINGS

## TYPE A COMPRESSION FITTINGS

Type A, or non-manipulative fittings enable the installer to make a compression joint without carrying out any work on the tube ends other than ensuring that they are clean, burr free, and cut square.

## TYPE B COMPRESSION FITTINGS

Type B, or manipulative fittings are used with soft (R220) copper tube and require the installer to flare the tube end before the ioint is assembled.

# TYPE B ADAPTORS If soft copper is found in

existing installations, the use of an 1870 Kufit adaptor allows conversion of the standard Kuterlite 900 Type A fitting to a Type B connection. The adaptor consists of an adaptor body, compensating ring and a DZR compression nut.

DZR compression

Compensating ring

Adaptor body

### Jointing R220 soft copper tube.

Kuterlite 600 and 900 fittings can be used to joint R220 soft copper tube in the applications in Table 1.

### Using K900 fittings underground

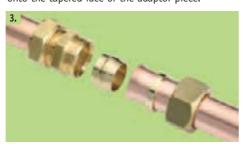

Kuterlite 900 fittings can be used underground in conjunction with soft copper tube (R220) and an 1870 Kufit adaptor. A hacksaw should be used to cut the tube – a tube cutter must not be used for this application. All jointing surfaces must be kept clean throughout the process. Following preparation of the fitting and tube, assembly is carried out as follows:

**1.** Slip the compression nut and compensating ring over the tube.

**2.** Flare the end of the tube using a clean K1822 forming tool of the correct size by dealing a few blows with a hammer. This operation can be made easier with the use of a few drops of light oil.

**3.** Insert the parallel end of the adaptor piece in the fitting socket and locate the flared tube end onto the tapered face of the adaptor piece.

**4.** Slide the ring and the nut down to the fitting body and first tighten by hand. Then, using spanners, tighten the nut one full turn. This is generally sufficient to provide a sound, leakproof joint.

R220 soft coppe		atible with K600/K900
Application	K600 fittings	K900 fittings
Above ground water and heating	In sizes up to 15mm, no pipe support liner is required. In sizes 15mm and above, use a K690 pipe support liner.	In sizes up to 15mm, no pipe support liner is required. In sizes 15mm and above, use a K690 pipe support liner.
Above ground fuel oil	Use a K690 pipe support liner.	Use a K690 pipe support liner.
Below ground water and oil	Not suitable.	In sizes 15mm to 42mm in conjunction with an 1870 Kufit adaptor.
Fuel oil below ground in access chambers as per	Not suitable.	In sizes 15mm to 42mm in conjunction with an 1870 Kufit adaptor.
BS 5410 Part 1		In sizes 6mm to 22mm in conjunction with a K690 pipe support liner.

### Jointing K947 and K948 reducers

Reducing sets can be used to convert the size of a socket in the fitting. Kuterlite K947 one-piece reducers and Kuterlite K948 reducing sets are used as follows:

1. The use of a suitable PTFE based compound or PTFE tape between the fitting body and reducing set is required when assembling the reducer into the fitting.

**2a. K947 only.** Tighten the nut until sufficient force is achieved to snap the reducer. This can be confirmed by an audible click, which is part of the design and does not indicate a fault.

**2b. K948 only.** Tighten the nut slowly until the tube is just prevented from rotating.

3. Tighten the nut a further ½ to ½ of a turn. An arrowhead stamped on the bottom of the nut provides a reference point for this.

Only one reducing set can be used per end. For multiple diameter reductions (eg  $54 \, \text{mm} \times 28 \, \text{mm}$ ) or double diameter reductions (eg  $35 \, \text{mm} \times 22 \, \text{mm}$ ), use only the correct reducing sets.

# Installation instructions Kuterlite 900 large size

# Making a large size Kuterlite 900 joint 67mm to 108mm

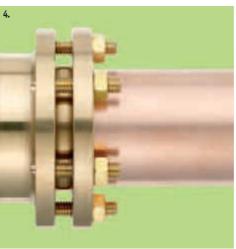

The same preliminaries and preparation guidelines as Kuterlite 600 and Kuterlite 900 in sizes up to 54mm apply.

**1.** Place the flange and compression ring onto the tube.

**2.** Insert the tube firmly into the compression fitting, ensuring that the compression ring seats centrally in the fitting body and that the tube makes firm contact with the tube stop.

**5.** If after assembling the joint in accordance with the instructions above a slight weep is experienced - as occasionally may happen - it will readily be corrected by the application of a smear of an approved sealing compound to the sealing faces.

### **EXTENDED RANGE**

The Kuterlite 900 range now includes large size fittings in sizes 67mm, 76mm and 108mm.

3. Bring up the compression flange, and tighten the nuts by hand. Using a spanner, continue to tighten the nuts diagonally in increments of ½ turn, to a total minimum of 2 turns and maximum of 2½ turns. DO NOT OVERTIGHTEN THE NUTS as this may distort the flange or shear the nuts.

Udstedt: Gyldig til:

2012.11.14 2015.10.01

Udstedt i medfør af byggelovens § 28 stk. 2

### GODKENDELSESINDEHAVER:

Pegler Yorkshire Ltd. Haigh Park Road, Stourton GB-LS10 IRT. Leeds Telefon: +44 113 2701104 Telefax: 44 113 2725291

### Kompressionsfittings til kobberrør og PEX-rør KUTERLITE K600 og K900 PRO RANGE dim. 6 - 54 mm

### **FABRIKAT:**

Pegler Yorkshire Ltd, England Yorkshire Fittings Gyártó Kft., Ungarn

### MÆRKNING:

- Fabrikantmærke: KUTERLITE (på omløber)
- Dimension (på omløber)
- Materiale: CR (hvis afzinkningsbestandig messing)

### KVALITETSKONTROL:

Godkendelsesindehaver opretholder obligatorisk kontrolaftale med Teknologisk Institut, Aarhus.

### BETINGELSER FOR MONTERING OG BRUG:

Højeste forekommende driftstryk i installationen må ikke overstige 1000 kPa.

For rør i bygning skal samlingerne være udskiftelige og anbragt, så de er fritliggende eller monteret i udsparinger eller foringsrør på en måde, så eventuelle utætheder umiddelbart kan konstateres.

Koblingen anvendes i brugsvandsinstallationer til samling af bløde og hårde kobberrør i dimensionerne 6-54 mm og PEX-rør i dimensionerne 10-28 mm.

Ved samling af bløde kobberrør og PEX-rør skal den til koblingen hørende støttebøsning anvendes.

Samlingen udføres i øvrigt i overensstemmelse med godkendelsesindehaverens monteringsvejeledning.

### **BESKRIVELSE OG TEKNISKE DATA:**

Udførelse	Koblingen består af 3 dele, koblingshus (nippel), kompressionsring og omløbermøtrik. Til samling af bløde kobberrør og PEX-rør anvendes desuden en støttebøsning.
Materiale	Alle dele i kompressionskoblingen er af messing. Koblingen kan også leveres i afzinkningsbestandig messing.
Dimension	6-54 mm (kobberrør) 10-28 mm (PEX-rør)

# **GASTEC QA agreement**

Pegler Yorkshire Ltd., Leeds, United Kingdom

Gastec Certification BV

# CERTIFICATION CONTRACT GASTEC QA-PRODUCT CERTIFICATE

Number: Q 09/002

Kiwa Gastec Certification, with its registered office in Apeldoorn, represented by M.C.A. Mekes, Unit Manager Gas Distribution Materials, on the one hand,

and

Pegler Yorkshire Ltd., with its registered office Leeds, United Kingdom, hereinafter referred to as "manufacturer", represented by Phil Thornton, Quality Manager - Systems/Approvals, on the other,

whereas the manufacturer has requested to use the GASTEC QA certificate and the certification label for the products manufactured and/or assembled and to be delivered by him, as specified in the appendix to this certification contract, which is an integral part of it;

whereas Kiwa Gastec Certification is willing to grant the manufacturer the right to use them under the conditions mentioned below.

declare to have agreed the following:

### Article 1 - Regulations

The GASTEC QA regulations apply to this certification contract.

### Article 2 - Reimbursement

The reimbursement payable to Kiwa Gastec Certification for concluding this certification contract is given in the appendix to this certification contract, which is an integral part of it.

### Article 3 - Terms of Delivery

The manufacturer's terms of delivery in respect of the products delivered under the certificate concerned shall not contravene the provisions in the GASTEC QA regulations for product certification and shall in particular not contravene the requirements for using the certificate.

# Fittings with compression ends for use with copper tubes

### STATEMENT BY KIWA

With this product certificate, issued in accordance with the Kiwa Regulations for Product Certification, Kiwa declares that legitimate confidence exists that the products supplied by

## Pegler Yorkshire Group Ltd.

complying with the technical specifications as laid down in this product certificate and marked with the Kiwa®-mark in the manner as indicated in this product certificate, on delivery, may be relied upon to comply with Kiwa evaluation guideline BRL-K639/02 "Fittings with compression ends for use with copper tubes".

Which covers the requirements of

EN 1254 "Copper and copper alloys – Plumbing fittings" and particularly Part 2: Fittings with compression ends for use with copper tubes.

3. Heenne

Bouke Meekma

Director Kiwa Nederland B.V.

Publication of the certificate is allowed.

Advice: consult www.kiwa.nl in order to ensure that this certificate is still valid.

As	a complete fitting and not as a loose part.	

### APPLICATION AND USE

The compression fittings are designed for the making of couplings in semi-hard copper tubes with external diameters in conformity with the evaluation guideline BRL-K760.

### MARKING

The products are marked with the wordmark "KIWA"

### Place of the mark:

"KIWA" on the fitting.

### Compulsory specifications:

- name or mark of manufacturer on the body captive nut;
- nominal size of the tube on the captive nut.

### Method of marking:

- indelible;
- visible after assembly.

### RECOMMENDATIONS FOR CUSTOMERS:

- 1. Check at the time of delivery whether:
  - 1.1 the producer has delivery in accordance with the agreement;
  - 1.2 the mark and the marking method are correct;
  - 1.3 the products show no visible defects as a result of transport etc.
- If you should reject a product on the basis of the above, please contact:
  - Pegler Yorkshire Group Ltd. in Doncaster; United Kingdom and, if necessary,
  - 2.2 Kiwa Nederland B.V.

- Consult the producer's processing guidelines for the proper storage and transport methods.
- Check whether this certificate is still valid by consulting www.1kiwa.com

This certifies that

### PEGLER YORKSHIRE GROUP LTD.

has had the undermentioned product examined, tested and found, when correctly installed, to comply with the requirements of the United Kingdom Water Supply (Water Fittings) Regulations/Scottish Water Byelaws.

### KUTERLITE K600 RANGE OF NON-MANIPULATIVE COMPRESSION FITTINGS FOR USE WITH COPPER TUBE

This certificate by itself is not evidence of a valid WRAS Approval. Confirmation of the current status of an approval must be obtained from the WRAS Directory (www.wras.co.uk/directory)

The product so mentioned will be listed in the Water Fittings and Materials Directory for a period until:

31 DECEMBER 2016

# Kitemark® Licence

### No. KM 05505

The licence is granted to:

Yorkshire Fittings Gyártó Kft H-1106 Budapest Maglódi út 16 Budapest Hungary

In respect of:

### BS EN 1254/BS 864 Pt2 Copper and copper alloys - Plumbing fittings

This issues the right and licence to use the Kitemark in accordance with the Kitemark Licence Conditions of Contract governing the use of the Kitemark, as may be updated from time to time by The British Standards Institution, and as approved by the Registrar under the Trade Marks Act 1994 (the "Conditions"). All defined terms in this Licence shall have the same meaning as in the Conditions.

The use of the Kitemark is authorized in respect of the Product(s) detailed on this Licence provided at or from the above address.

For and on behalf of BSI:

Gary Fenton, Global Assurance Director

First Issued: 17/12/1971 Latest Issue: 14/09/2012

\$

### No. KM 05505

BS EN 1254 Copper and Copper Alloys - Copper Fittings:

BS EN 1254-2:1998 Compression ends for copper tube

BS EN 1254-4:1998 Other ends

Note. With the exception of marking, the products listed are also deemed to conform to the requirements of the obsolescent British Standard BS 864 Part 2.

### Strojírenský zkušební ústav, s. p., autorizovaná osoba 202 Hudcova 56b, Brno, Česká republika Rozhodnutí o autorizaci č. 31/2002 ze dne 2002-09-18

# CERTIFIKÁT VÝROBKU

č: AO 202/C5/2006/reg. č: B-30-00083-06

V souladu s ustanovením § 5 odst. 2 nařízení vlády č. 163/2002 Sb., kterým se stanoví technické požadavky na vybrané stavební výrobky, ve znění pozdějších změn a doplňků, autorizovaná osoba potvrzuje, že u stavebních výrobků:

Tvarovky pro spoje trubek sevřením

typové označení:

Kuterlite série K600

Kuterlite série K900

bližší specifikace výrobků je uvedena na 2. a 3. straně

výrobce:

YORKSHIRE Fittings Gyártó Kft. Maglódi út 16., H-1106 Budapešť

Maďarsko

přezkoumala podklady předložené výrobcem, provedla počáteční zkoušku typu výrobku na vzorku, posoudila systém fizení výroby a zjistila, že uvedené výrobky splňují základní požadavky nafízení vlády č. 163/2002 Sb., ve znění pozdějších změn a doplňků. Při posuzování shody použila autorizovaná osoba následující normativní dokumenty:

ČSN EN 1254-2:2000, ČSN EN 1254-4:2000 a vyhlášku č. 409/2005 Sb.

Autorizovaná osoba zjistila, že systém řízení výroby odpovídá příslušné technické dokumentaci podle § 5 odst. 1 písm. d) a zabezpečuje, aby výrobky uváděné na trh splňovaly požadavky stanovené výše uvedenými určenými normami, technickými předpisy a odpovídaly technické dokumentaci podle § 4 odst. 3.

Nedílnou součástí tohoto certifikátu je závěrečný protokol č. 30-5367 ze dne 2006-02-23, který obsahuje závěry zjišťování, ověřování, výsledky zkoušek a základní popis, nezbytně pro identifikací certifikovaných výrobků.

Tento certifikát zůstává v platnosti po dobu, po kterou se požadavky stanovené určenými normami, technickými předpisy, na které byl uveden odkaz nebo výrobní podmínky v místě výroby či systém řízení výroby, výrazně nezmění.

Autorizovaná osoba provádí nejméně jedenkrát za 12 měsíců dohled nad řádným fungováním systému řízení výroby v místě výroby, odebírá vzorky výrobků v místě výroby, provádí jejich zkoušky a posuzuje, zda vlastnosti výrobků odpovídají určeným normám a technickým předpisům podle ustanovení § 5 odst. 4 výše uvedeného nařízení vlády.

Brno 2006-02-23

Ing. Petr Mašek ředitel

B-30-00083-06, strana 1 (3)

### Specifikace výrobků:

Tvarovky se vyrábí ze slitin mědí a svěrný připoj může být kombinován s pájecími nebo závitovými konci.

Účel použití: - pro nezakryté domácí a komerční instalace uvnitř nebo vně budov a to ke kompletaci rozvodů vody (včetně vody pitné podle vyhlášky č. 252/2004 Sb.), otopné vody, stlačeného vzduchu a jiných neagresivních tekutin, vedených měděnými trubkamí. Pro použití na rozvody tekutin jsou určeny tvarovky o rozměrech od 6 mm do 108 mm. Tvarovky do 54 mm používají k sevření matice, nad 54 mm se používají přiruby se šrouby.

### Maximální teploty a přetlaky:

jmenovitý průměr konce tvarovky	pracovní teplota					
Interiovity pramer konce tvarovky	min15 °C	30 °C	65 °C	110 °C	max. 120 °C	
od 6 mm do 54 mm včetně	16 bar	16 bar	10 bar	6 bar	5 bar	
nad 54 mm do 108 mm včetně	10 bar	10 bar	6 bar	4 bar	3 bar	

```
Typy:
K604

    T odbočka se závity (TF x C x TM) − ½ x 15 x ½

K609

Jmenovitý průměr konce tvarovky = vnější průměr připojované trubky v mm: 6, 8, 10, 12, 15, 18, 22, 28, 35, 42, 54, 67, 76, 108.

Velikost závitu v palcích: ¼, ¼, ¼, ½, ¾, 1, 1¼, 1½, 2, 2½, 3, 4 - závit podle ČSN EN 10226-1:2005 (ČSN ISO 7-1:1996) nebo ČSN EN ISO 228-1:2003 podle druhu spoje.

Velikost závitu převlečně matice v palcích: 1/4, 1/4 - závit podle ČSN EN ISO 228-1:2003, tvarovka má konec pro ploché těsnění.

C = svěrný spoj S = pájený spoj T = závit F = vnitřní M = vnější L = délka tvarovky
