Input / Output Mode Setting

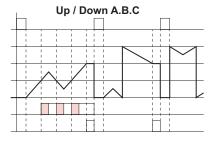

One-shot output from Output 1 Self-holding output

One-shot output from Output 2 Self-holding output

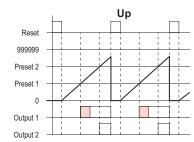

Output mode N: Output and present value display are maintained until reset.

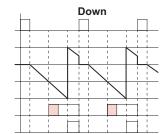

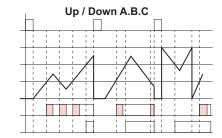

Output mode **F**: Present value display runs continuously. Outputs are maintained until reset.

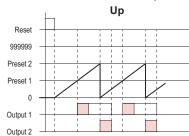

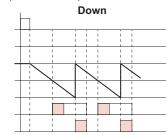

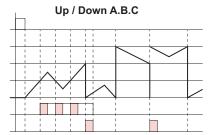

Output mode **C**:

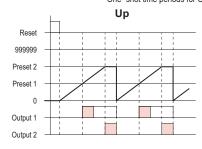

Present value is placed in reset start status as soon as count up is reached. The count up is not displayed. Outputs are 1-shot and operate repeatedly. Output 1 is self-holding, and goes off after expiration of the 1-shot period for Output 2. One -shot time periods for Output 1 and 2 are independent.

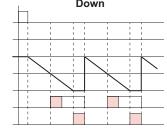

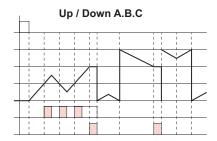

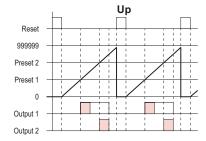

Output mode R: Present value is placed in reset start status as soon as count up is reached. Outputs are 1-shot and operate repeatedly. Output 1 is self-holding, and goes off after expiration of the 1-shot period for Output 2. One -shot time periods for Output 1 and 2 are independent.

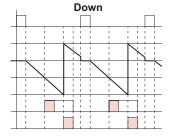

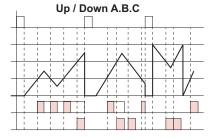

Output mode K: Present value runs continuously. Output 1 is self-holding, and goes off after expiration of the 1-shot period for Output 2. One-shot time periods for Output 1 and 2 are independent.

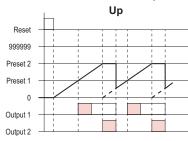

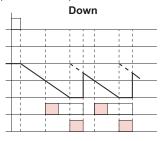

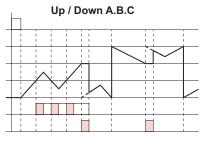

Output mode **P**:

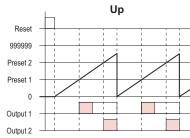

Present value display does not change during 1-shot time period, but reset start status is returned to as soon as count is reached. Outputs are 1-shot and operate repeatedly. Output 1 is self-holding, and goes off after expiration of the 1-shot period for Output 2. One -shot time periods for Output 1 and 2 are independent.

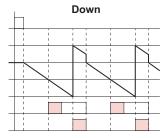

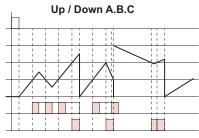

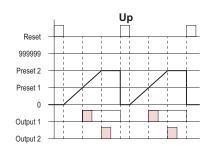

Output mode Q: Present value runs continuously through 1-shot time period and returns to reset start status immediately afterward. Outputs are 1-shot and operate repeatedly. Output 1 is self-holding, and goes off after expiration of the 1-shot period for Output 2. One -shot time periods for Output 1 and 2 are independent.

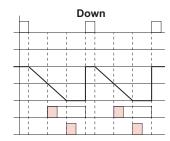

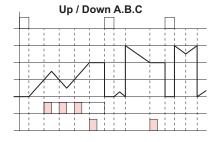

Output mode A: Present value and output 1 maintain status until reset. Output 1 and 2 operate independently.

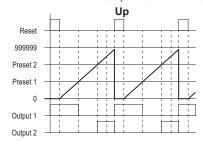

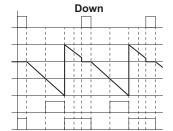

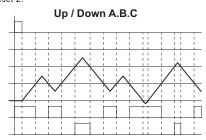

Output mode **L**:

The display continues to increase/decrease until the overflow or underflow value is reached. Output 1 is held while the present value is less than or equal to Preset 1. Output 2 is held while the present value is greater than or equal to Preset 2.

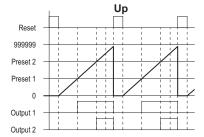

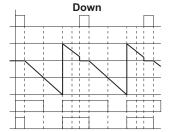

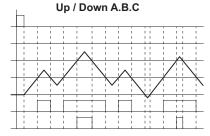

Output mode H: The display continues to increase/decrease until the overflow or underflow value is reached. Output $\dot{\mathbf{1}}$ is held while the present value is greater than or equal to Preset 1.
