### Main Features

- Proven, Ready-to-use Serial to WiFi : brings Wi-Fi connectivity to any device with UART or SPI
- No need of RF design
- High Efficiency in Operation : Ultra low-power consumption through dynamic power management
- Easy Configuration : comprehensive serial command or built-in web server
- Advanced Wi-Fi Security
- Regulatory Certification : CE (EU), KC (Korea), FCC (US), TELEC (Japan)

### Main Features

- Ethernet SoC solution with MCU and Hardwired TCP/IP Core
- Optimized for the embedded application platform requiring 'Internet of Things'
- Industrial standard MCU core integrated
- Market-proven hardwired TCP/IP stack supports TCP, UDP, IPv4, ICMP, ARP, IGMP and PPPoE

### Main Features

- Un-attackable hardware network engine for preventing network attacks such as flooding spoofing, injection
- Supports hardwired TCP/IP protocols : TCP, UDP, ICMP, IPv4, ARP, IGMP, PPPoE
- Easy to use (Easy & simple control like memory)
- Guarantee stable & high network performance & data communication
- 3.3 V operation with 5V I/O signal tolerance

## Application Module

### WIZ550WEB

#### Main Features

- Web Server built-in module to control digital I/O or analog input on the web browser
- Customizable web page : provides various demo pages for PC & mobile device
- 16 digital I/Os & 4 analog inputs
- Supports "Serial to Web(Ethernet)" data transmission
- Module configuration : web, AT commands & configuration tool program
- Provides JAVA based configuration tool program
- Supports firmware uploading using TFTP

# WIZnet OSHW Products

## WizArduino M0 ETH

WizArduino M0 ETH is the WIZnet's Arduino platform. As it is based on 32bit ARM Cortex-M0, it enables you to develop high performing applications.

## WizArduino MEGA WiFi

WizArduino MEGA WiFi is based on Arduino's MEGA 2560 board and added WizFi310, which is as simple as the Arduino UNO platform and has basic functions for implementing IoT function.
