SKRC 440/660 are economic RC Snubber Networks for up to 500A RMS load current applications. The modules are primarily designed to limit the rate of rise of voltage spikes which may exceed the Dv/Dt rating of SCR's. Besides protection, the module will also assist in latching SCR's used for low level inductive load currents.

The SKRC Module can also be supplied incorporating an optional MOV* (Metal Oxide Varistor) forming an excellent protection unit for semiconductor devices against high energy level voltage spikes. The packaging concept allows modules to be mounted directly alongside SEMIPACKS and the electrical connections are made using 2.8mm push on connectors.
