# SLCD-61N2

Solderable Planar Photodiode

Features
- Fast response
- High reliability, long life
- Ideal for moderate reverse bias voltage operation
- Linear short circuit current
- Low capacitance

Description

The Silonex 5.1 x 5.1 solderable planar photodiodes chips feature low cost, high reliability, and linear short circuit current over a wide range of illumination. These devices are widely used for light sensing and power generation because of their stability and high efficiency. They are particularly suited to power conversion applications due to their low internal impedance, relatively high shunt impedance, and stability. These devices also provide a reliable and inexpensive detector for instrumentation and light beam sensing applications.
