

SMART RTD/RESISTANCE/SLIDE WIRE SIGNAL CONDITIONER

SEM1600T

- SUITABLE FOR RTD, THERMOCOUPLE AND SLIDE WIRE SENSORS
- CURRENT, VOLTAGE OR BIPOLAR VOLTAGE OUTPUT
- POWERED (10 to 32) V AC / (10 to 48) V DC SUPPLY
- 22 SEGMENT USER LINEARISATION
- SENSOR OFFSET AND OUTPUT ALIGNMENT
- ADJUSTABLE INPUT FILTER
- USB PROGRAMMABLE

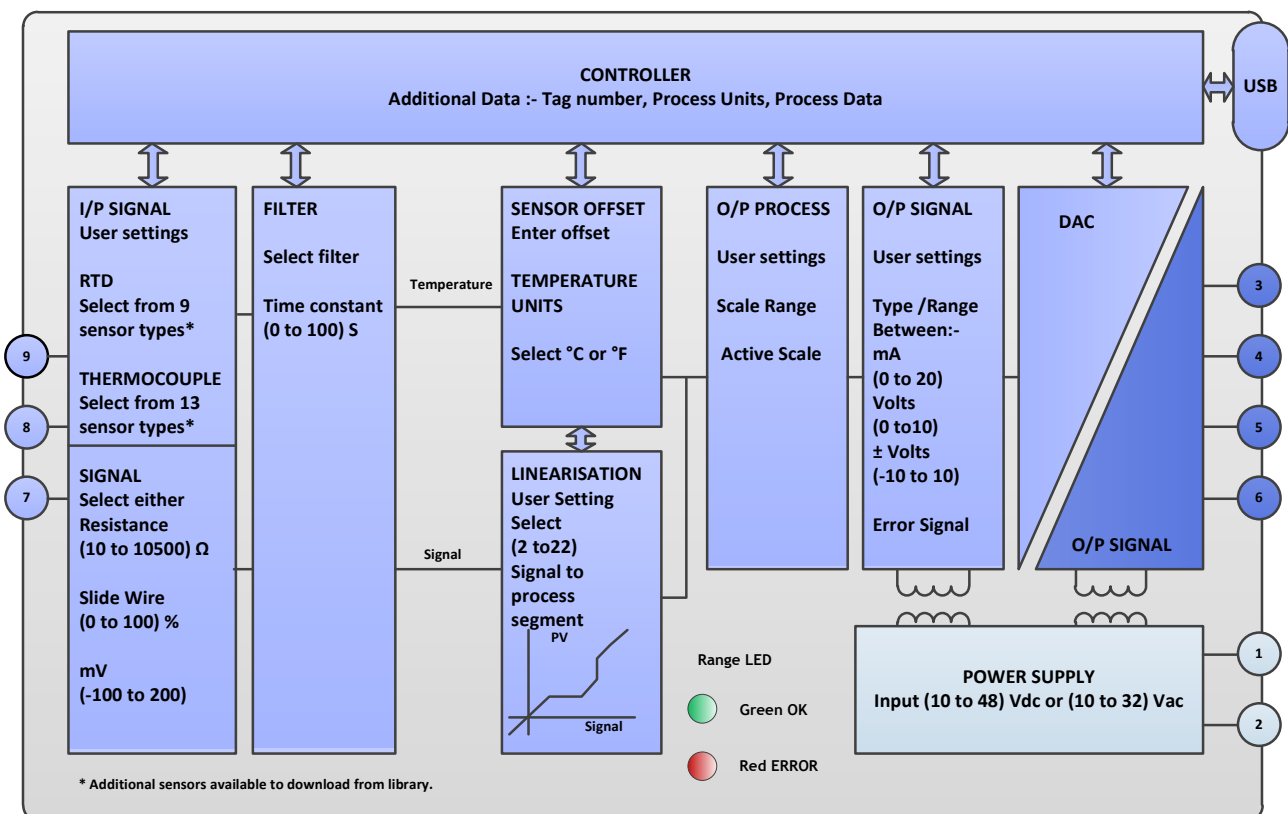

INTRODUCTION

The SEM1600T accepts resistance or mV signals from RTD, Slidewire or Thermocouple sensors. The flexible design allows the use of any resistive sensor within the range of (10 to 10500) Ω. Including Pt100, 500, 1000, Ni or Cu sensors, slide wire sensors up to 100 KΩ and 13 different thermocouple types. Other sensor characteristics or your own 22 point linearisation characteristic (for slidewire, linear resistance or mV) can be downloaded into the product enabling you to adapt it exactly to your application.

The output stage offers either voltage, bipolar voltage or current re-transmission signals. The retransmission signal can be ranged to a scale anywhere within the input process range. A transmitter power supply is provided on the output meaning the product can accept sink or source mA applications. While the voltage output will drive 2 mA into 5 KΩ @ 10 V

For ease of use, a high efficiency switch mode power supply is fitted as standard and does not require any adjustment between ac or dc applications. Operating voltages are (10 to 48) V dc and (10 to 32) V ac

Our USB interface is fitted for quick and easy configuration. Just connect a standard USB cable between the SEM1600T and your PC. Using our free configuration software, your PC will automatically upload the existing configuration data and guide you through any changes you wish to make. To further help save time, the SEM1600T does not need to be wired to a power supply during the configuration process, it is powered via the USB interface from your PC.
