July 2005

## Single－channel：6N135，6N136，HCPL－2503，HCPL－4502 Dual－Channel：HCPL－2530，HCPL－2531 High Speed Transistor Optocouplers

Features
－High speed－1 MBit／s
－Superior CMR－10 kV／us
■ Dual－Channel HCPL－2530／HCPL－2531
■ Double working voltage－480V RMS
－CTR guaranteed $0-70^{\circ} \mathrm{C}$
－U．L．recognized（File \＃E90700）

## Applications

－Line receivers
－Pulse transformer replacement
■ Output interface to CMOS－LSTTL－TTL
■ Wide bandwidth analog coupling

## Description

The HCPL－4502／HCPL－2503，6N135／6 and HCPL－2530／HCPL－ 2531 optocouplers consist of an AIGaAs LED optically coupled to a high speed photodetector transistor．
A separate connection for the bias of the photodiode improves the speed by several orders of magnitude over conventional phototransistor optocouplers by reducing the base－collector capacitance of the input transistor．
An internal noise shield provides superior common mode rejec－ tion of $10 \mathrm{kV} / \mu \mathrm{s}$ ．An improved package allows superior insulation permitting a 480 V working voltage compared to industry stan－ dard of 220 V ．

## Notes

1. Derate linearly above $70^{\circ} \mathrm{C}$ free-air temperature at a rate of $0.8 \mathrm{~mA} /{ }^{\circ} \mathrm{C}$.
2. Derate linearly above $70^{\circ} \mathrm{C}$ free-air temperature at a rate of $1.6 \mathrm{~mA} /{ }^{\circ} \mathrm{C}$.
3. Derate linearly above $70^{\circ} \mathrm{C}$ free-air temperature at a rate of $0.9 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$.
4. Derate linearly above $70^{\circ} \mathrm{C}$ free-air temperature at a rate of $2.0 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$.
5. Current Transfer Ratio is defined as a ratio of output collector current, $\mathrm{I}_{\mathrm{O}}$, to the forward LED input current, $\mathrm{I}_{\mathrm{F}}$ times $100 \%$.
6. The $4.1 \mathrm{k} \Omega$ load represents 1 LSTTL unit load of 0.36 mA and $6.1 \mathrm{k} \Omega$ pull-up resistor.
7. The $1.9 \mathrm{k} \Omega$ load represents 1 TTL unit load of 1.6 mA and $5.6 \mathrm{k} \Omega$ pull-up resistor.
8. Common mode transient immunity in logic high level is the maximum tolerable (positive) $\mathrm{dV}_{\mathrm{cm}} / \mathrm{dt}$ on the leading edge of the common mode pulse signal $\mathrm{V}_{\mathrm{CM}}$, to assure that the output will remain in a logic high state (i.e., $\mathrm{V}_{\mathrm{O}}>2.0 \mathrm{~V}$ ). Common mode transient immunity in logic low level is the maximum tolerable (negative) $\mathrm{dV}_{\mathrm{cm}} / \mathrm{dt}$ on the trailing edge of the common mode pulse signal, $\mathrm{V}_{\mathrm{CM}}$, to assure that the output will remain in a logic low state (i.e., $\mathrm{V}_{\mathrm{O}}<0.8 \mathrm{~V}$ ).
9. Device is considered a two terminal device: Pins 1,2,3 and 4 are shorted together and Pins 5, 6, 7 and 8 are shorted together.
10. Measured between pins 1 and 2 shorted together, and pins 3 and 4 shorted together.
