Vision System

FH-Series

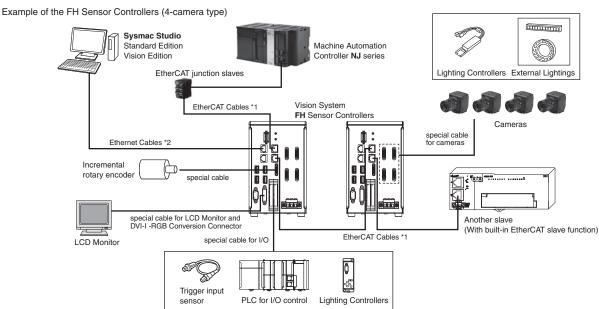

Easier to Embed in Machine, **Shorter Machine Cycle Times**

- Calculations are easy to set for the results from four parallel tasks.
- Synchronous control of devices connected via EtherCAT is possible.
- The new Shape Search III processing item enables fast, precise, and stable measurements.
- Microsoft® .NET is supported to share machine interface with PC.
- User interface customization is supported.

System configuration

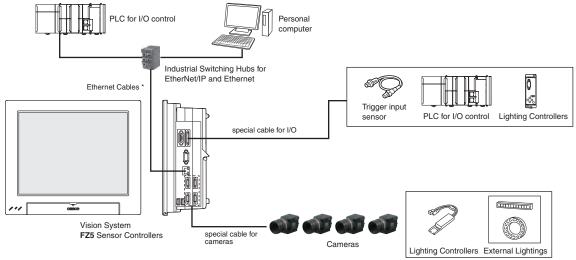

EtherCAT connections for FH series

*1. To use STP (shielded twisted-pair) cable of category 5 or higher with double shielding (braiding and aluminum foil tape) for EtherCAT and RJ45 connector.
*2. To use STP (shielded twisted-pair) cable of category 5 or higher for Ethernet and RJ45 connector.

EtherNet/IP, No-protocol Ethernet and PLC Link Connections for FZ5 series

Example of the FZ5 Sensor Controllers (4-camera type)

^{*} To use Straight or cross STP (shielded twisted-pair) cable of category 5 or higher for Ethernet and RJ45 connector

Ordering Information

FH Series Sensor Controllers

Cables

| Item | Descriptions | Model |
|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| .9 | Camera Cable Cable length: 2 m, 5 m, or 10 m *2 | FZ-VS |
| /9 | Bend resistant Camera Cable Cable length: 2 m, 5 m, or 10 m *2 | FZ-VSB |
| /9 | Right-angle Camera Cable *1 Cable length: 2 m, 5 m, or 10 m *2 | FZ-VSL |
| /9 | Long-distance Camera Cable Cable length: 15 m *2 | FZ-VS2 |
| 0 | Long-distance Right-angle Camera Cable Cable length: 15 m *2 | FZ-VSL2 |
| | Cable Extension Unit Up to two Extension Units and three Cables can be connected. (Maximum cable length: 45 m *2) | FZ-VSJ |
| .9 | Monitor Cable Cable length: 2 m or 5 m (When you connect a LCD Monitor FZ-M08 to FH sensor controller, please use it in combination with a DVI-I -RGB Conversion Connector FH-VMRGB.) | FZ-VM |
| | DVI-I -RGB Conversion Connector For FH Series only | FH-VMRGB |
| 19 | Parallel I/O Cable Cable length: 2 m or 5 m, For FZ Series only | FZ-VP |
| .\2 | Parallel I/O Cable for Connector-terminal Conversion Unit Cable length: 2 m or 5 m, For FZ Series only Connector-Terminal Block Conversion Units can be connected (Terminal Blocks Recommended Products: OMRON XW2R-J50G-T, XW2R-E50G-T, XW2R-P50G-T) | FZ-VPX |
| 7 | Parallel I/O Cable *3 Cable length: 2 m or 5 m, For FH Series only | XW2Z-S013-2/-S013-5 |
| 9 | Encoder Cable for line-driver Cable length: 1.5 m, For FH Series only | FH-VR |

 ^{*1} This Cable has an L-shaped connector on the Camera end.
 *2 The maximum cable length depends on the Camera being connected, and the model and length of the Cable being used. For further information, please refer to the "Cameras / Cables" table.
 When a high-speed CMOS camera FH-S_02/-S_04 is used in the high speed mode of transmission speed, two camera cables are required.
 *3 2 Cables are required for all I/O signals.

Recommended EtherCAT and EtherNet/IP Communications Cables
Use Straight STP (shielded twisted-pair) cable of category 5 or higher with double shielding (braiding and aluminum foil tape) for EtherCAT.
Use Straight or cross STP (shielded twisted-pair) cable of category 5 or higher for EtherNet/IP.

| | I OI LUIGINGUIF | Pairs: 0.5 mm, 4-pair Cable | RJ45 Connectors | Panduit Corporation | MPS588 *6 | | | | |

Note: Please be careful while cable processing, for EtherCAT, connectors on both ends should be shield connected and for EtherNet/IP, connectors on only one end should be shield connected.

- The FH series supports the EtherCAT communication. It cannot be used in FZ series.

 The lineup features Low Smoke Zero Halogen cables for in-cabinet use and PUR cables for out-of-cabinet use.

 For details, refer to Cat.No.G019.

 We recommend you to use above cable for EtherCAT and EtherNet/IP, and RJ45 Connector together.

 We recommend you to use above cable for EtherCAT and EtherNet/IP, and RJ45 Assembly Connector together.

 We recommend you to use above cable For EtherNet/IP and RJ45 Connectors together.

^{*1} Insert the iris range into \(\sum \subset \) in the model number as follows. F=aperture: blank F=5.6: FN056 F=8: FN080 *2 F-number can be selected from maximum aperture, 5.6, and 8.0.

Extension Tubes

| Lenses | For C mounut Lenses * | For Small Digital CCD Cameras |
|----------|--------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|
| Model | 3Z4S-LE SV-EXR | FZ-LESR |
| Contents | Set of 7 tubes (40 mm, 20 mm, 10 mm, 5 mm, 2.0 mm, 1.0 mm, and 0.5 mm) Maximum outer diameter: 30 mm dia. | Set of 3 tubes (15 mm,10 mm, 5 mm) Maximum outer diameter: 12 mm dia. |

Do not use the 0.5-mm, 1.0-mm, and 2.0-mm Extension Tubes attached to each other. Since these Extension Tubes are placed over the threaded section of the Lens or other Extension Tube, the connection may loosen when more than one 0.5-mm, 1.0-mm or 2.0-mm Extension Tube are used together. Reinforcement is required to protect against vibration when Extension Tubes exceeding 30 mm are used.

The image logging capacity changes when multiple cameras of different types are connected at the same time.

The current consumption when the maximum number of cameras supported by each controller are connected.

If a strobe controller model is connected to a lamp, the current consumption is as high as when an intelligent camera is connected.

The image logging capacity changes when multiple cameras of different types are connected at the same time.

Do not ground the positive terminal of the 24-VDC power supply to a Lite Controller.

If the positive terminal is grounded, electrical shock may occur when an SG (0-V) part, such as the case of the Controller or Camera, is touched. The current consumption when the maximum number of cameras supported by each controller are connected.

If a strobe controller model is connected to a lamp, the current consumption is as high as when an intelligent camera is connected.

| [12] | EtherNet NET LINK/ACK1 LED | Lit when connected with an EtherNet device, and blinks while performing communications. |
| [13] | EtherNet NET RUN2 LED | Lit when EtherNet communications are usable. |
| [14] | EtherNet NET LINK/ACK2 LED | Lit when connected with an EtherNet device, and blinks while performing communications. |

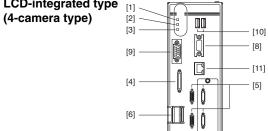

| | Name | Description |
|---|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| А | SD memory card installation connector | Install the SD memory card. Do not plug or unplug the SD card during measurement operation. Otherwise measurement time may be affected or data may be destroyed. |
| В | EtherNet connector | Connect an EtherNet device. |
| С | USB connector | Connect a USB device. Do not plug or unplug it during measurement operation. Otherwise measurement time may be affected or data may be destroyed. |
| D | RS-232C connector | Connect an external device such as a programmable controller. |
| Е | DVI-I connector | Connect a monitor. |
| F | I/O connector (control lines, data lines) | Connect the controller to external devices such as a sync sensor and PLC. |
| G | EtherCAT address setup volume | Used to set a node address (00 to 99) as an EtherCAT communication device. |
| Н | EtherCAT communication connector (IN) | Connect the opposed EtherCAT device. |
| ı | EtherCAT communication connector (OUT) | Connect the opposed EtherCAT device. |
| J | Encoder connector | Connect an encoder. |
| K | Camera connector | Connect cameras. |
| L | Power supply terminal connector | Connect a DC power supply. Wire the controller independently on other devices. Wire the ground line. Be sure to ground the controller alone. Perform wiring using the attached power supply connector. |

Example of the FZ5 Sensor Controllers

LCD-integrated type (4-camera type)

| | Name | Description |
|------|-------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| [1] | POWER LED | Lit while power is ON. |
| [2] | RUN LED | Lit while the controller is in Run Mode. |
| [3] | ERROR LED | Lit when an error has occurred. |
| [4] | I/O connector (control lines, data lines) | Connect the controller to external devices such as a sync sensor and PLC. |
| [5] | Camera connector | Connect cameras. |
| [6] | Power | Connect a DC power supply. Wire the power supply unit independently of other devices. After wiring, replace the terminal cover. |
| [7] | Ground terminal | Connect the ground wire. Make sure that the controller is grounded with a separate ground wire. |
| [8] | Monitor connector (analog RGB) | Connect a monitor. (Provided with Lite controller type only) |
| [9] | RS-232C/RS-422 connector | Connect an external device such as a personal computer or PLC. |
| [10] | USB connector | Connect a track ball, mouse and USB memory. A total of four USB ports are provided and any of them can be used. However, when connecting two or more USB memories, do not connect them to adjacent ports. Doing so may cause the USB memories to come into contact, resulting in malfunction or damage. |
| [11] | EtherNet connector | Connect the controller to a personal computer. |
| [12] | Touch pen (holder) | A touch pen is stored. (Provided with the LCD integrated type only) |

Processing Items

| Group | lcon | | Processing Item | Corresponding Page in the Catalog |
|------------------------------|------------|--------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------|
| | å | Search | Used to identify the shapes and calculate the position of measurement objects. | P16 |
| | moto. | Flexible Search | Recognizing the shapes of workpieces with variation and detecting their positions. | P16 |
| | -0- | Sensitive Search | Search a small difference by dividing the search model in detail, and calculating the correlation. | P16 |
| | - | ECM Search | Used to search the similar part of model form input image. Detect the evaluation value and position. | P16 |
| | | EC Circle Search | Extract circles using "round " shape information and get position, radius and quantity in high preciseness. | P16 |
| | * | Shape Search II | Used to search the similar part of model from input image regardless of environmental changes. Detect the evaluation value and position. | P16 |
| | <u>*</u> | Shape Search III | Robust detection of positions is possible at high-speed and with high precision incorporating environmental fluctuations, such as differences in individual shapes of the workpieces, pose fluctuations, noise superimposition and shielding. | P16 |
| | 4 | EC Corner | This processing item measures a corner position (corner) of a workpiece. | P16 |
| | * | Ec Cross | The center position of a crosshair shape is measured using the lines created by the edge information on each side of the crosshair. | P16 |
| | 8 | Classification | Used when various kinds of products on the assembly line need to be sorted and identified. | P17 |
| | + | Edge Position | Measure position of measurement objects according to the color change in measurement area. | P16 |
| | UUU | Edge Pitch | Detect edges by color change in measurement area. Used for calculating number of pins of IC and connectors. | P16 |
| | # | Scan Edge Position | Measure peak/bottom edge position of workpieces according to the color change in separated measurement area. Measure max/min/average width of | P16 |
| | = | Scan Edge Width | workpieces according to the color change in separated measurement area. | P16 |
| Inspections / Measurement | Ø | Circular Scan Edge Position | Measure center axis, diameter and radius of circular workpieces. | P16 |
| Measurement | 0 | Circular Scan Edge Width | Measure center axis, width and thickness of ring workpieces. | P16 |
| | | Intersection | Calculate approximate lines from the edge information on two sides of a square workpiece to measure the angle formed at the intersection of the two lines. | P16 |
| | * | Color Data | Used for detecting presence and mixed varieties of products by using color average and deviation. | P17 |
| | | Gravity and Area | Used to measure area, center of gravity of workpices by extracting the color to be measured. | P17 |
| | | Labeling | Used to measure number, area and gravity of workpieces by extracting registered color. | P17 |
| | 9 • | Label Data | Selecting one region of extracted Labeling, and get that measurement. Area and Gravity position can be got and judged. | |
| | M | Defect | Used for appearance measurement of plain-color measurement objects such as defects, stains and burrs. Check the defect on the object. | P17 |
| | A | Precise Defect | Parameters for extraction defect can be set precisely. Difference can be detected by overlapping | P17 |
| | | Fine Matching | and comparing (matching) registered fine images with input images. Recognize character according | P16 |
| - | AB | Character Inspect | correlation search with model image registered in [Model Dictionary]. Reading character string is verified | P17 |
| | 08-02-1 | Date Verification | with internal date. Register character pattern as | P17 |
| | A | Model Dictionary | dictionary. The pattern is used in [Character Inspection]. | |
| | 188 | 2DCode *2 | Recognize 2D code and display where the code quality is poor. | P17 |
| | IIIII | Barcode *1 | Recognize barcode, verify and output decoded characters. | P17 |
| | | Circle Angle | Used for calculating angle of inclination of circular measurement objects. | P17 |
| | | Glue Bead Inspection | You can inspect coating of a specified color for gaps or runoffs along the coating path. | P17 |
| Image | | Camera Image Input | To input images from cameras. And set up the conditions to input images from cameras. | |
| Capturing | 噢 | Camera Image Input FH | This is a processing item specific to the FH Sensor Controller to input images from high-speed cameras. | |

| Group | Icon | | Processing Item | Corresponding Page in the Catalog |
|------------------------------------|----------|--------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| | 9 | Camera Image Input HDR | Create high-dynamic range images by acquiring several images with different conditions. | - |
| Image Capturing | Life | Camera Image Input HDRLite | HDR function for FZ-SQ□ Intelligent Compact Cameras. | |
| | 1 | Camera Switch | To switch the cameras used for measurement. Not input images from cameras again. | |
| | | Measurement Image Switching | To switch the images used for measurement. Not input images from camera again. | |
| | M | Position Compensation | Used when positions are differed. Correct measurement is performed by correcting position of input images. | P18 |
| | | Filtering | Used for processing images input from cameras in order to make them easier to be measured. | P18 |
| | | Backgrond Suppression | To enhance contrast of images by extracting color in specified brightness. | P18 |
| | | Brightness Correct Filter | Track brightness change of entire screen and remove gradual brightness change such as uneven brightness. | P18 |
| | | Color Gray Filter | Color image is converted into monochrome images to emphasize specific color. | P18 |
| | | Extract Color Filter | Convert color image to color extracted image or binary image. | P18 |
| | - | Anti Color Shading | To remove the irregular color/pattern by uniformizing max.2 specified colors. | P18 |
| Correcting | | Stripes Removal | Remove the background pattern of vertical, horizontal and diagonal stripes. | P18 |
| images | ABC | Polar Transformation | Rectify the image by polar transformation. Useful for OCR or pattern inspection printed on circle. | P18 |
| | 4 | Trapezoidal Correction | Rectify the trapezoidal deformed image. | P18 |
| | 34-/ | Machine Simulator | How the alignment marks would move on the image when each stage or robot axis is controlled can be checked. | |
| | | Image Subtraction | The registered model image and measurement image are compared and only the different pixels are extracted and converted to an image. | |
| | | Advanced filter | Process the images acquired from cameras in order to make them easier to measure. This processing item consolidates existing image conversion filtering into one processing item and adds extra functions. | P19 |
| | | Panorama | Combine multiple image to create one big image. | P18 |
| | Ô | Macro | Advanced arithmetic processing can be easily incorporated into workflow as macro processing items. | P20 |
| | | Macro Calculation | This function is convenient when the user wants to calculate a value using an original calculation formula or change the set value or system data of a processing item. | P20 |
| | ABC | Calculation | Used when using the judge results and measured values of ProcItem which are registered in processing units. | |
| | + | Line Regression | Used for calculating regression line from plural measurement coodinate. | |
| | 0 | Circle Regression | Used for calculating regression circle from plural measurement coordinate. | |
| | | Precise Calibration | Used for calibration corresponding to trapezoidal distortion and lens distortion. | P15 |
| | User | User Data | Used for setting of the data that can be used as common constants and variables in scene group data. | P21 |
| Assisting | | Set Unit Data | Used to change the ProcItem data (setting parameters,etc.) that has been set up in a scene. | |
| Assising inspections / measurement | 1 | Get Unit Data | Used to get one data (measured results, setting parameters,etc.) of ProcItem that has been set up in a scene. | |
| | | Set Unit Figure | Used for re-setting the figure data (model, measurement area) registered in an unit. | |
| | (B) | Get Unit Figure | Used for get the figure data (model, measurement area) registered in an unit. | |
| | | Trend Monitor | Used for displaying the information about results on the monitor, facilitating to avoid NG and analyze causes. | P21 |
| | 1 | Image Logging | Used for saving the measurement images to the memory and USB memory. | |
| | | Image Conversion Logging | Used for saving the measurement images in JPEG and BMP format. | |
| | £1# | Data Logging | Used for saving the measurement data to the memory and USB memory. | |
| | 8 | Elapsed Time | Used for calculating the elapsed time since the measurement trigger input. | |
| | 豆 | Wait | Processing is stopped only at the set time. The standby time is set by the | |

| Group | Icon | | Processing Item | Corresponding Page in the Catalog |
|-------------------------------------|---------------|------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| | 4 | Focus | Focus setting is supported. | P15 |
| | * | Iris | Focus and aperture setting is supported. | P15 |
| | 000 | Parallelize | A part of the measurement flow is divided into two or more tasks and processed in parallel to shorten the measurement time. This processing item is placed at the top of processing to be performed in parallel. | |
| | Ja 000 | Parallelize Task | A part of the measurement flow is divided into two or more tasks and processed in parallel to shorten the measurement time. This processing item is placed immediately before processing to be performed in parallel between Parallelize and Parallelize End. | |
| | | Statistics | Used when you need to calculate an average of multiple measurement results. | |
| Assisting inspections / measurement | be the | Referrence Calib Data | Calibration data and distortion compensation data held under other processing items can be referenced. | |
| | | Position Data Calculation | The specified position angle is calculated from the measured positions. | P14 |
| | +1 | Stage Data | Sets and stores data related to stages. | |
| | <u> </u> | Robot Data | Sets and stores data related to robots. | |
| | | Vision Master Calibration | This processing item automatically calculates the entire axis movement amount of the control equipment necessary for calibration. | P15 |
| | 4 | PLC Mastoer Calibration | Calibration data is created using a communication command from PLC. | P15 |
| | ز | Convert Position Data | The position angle after the specified axis movement is calculated. | P14 |
| - | 4/ | Movement Single Position | The axis movement that is required to match the measured position angle to the reference position angle is calculated. | P14 |
| | 112/ | Movement Multi Points | The axis movements that are required to match the measured position angles to the corresponding reference position angles are calculated. | P14 |
| | + | Detection Point | Obtains position/angle information by r eferring to the coordinate values measured with the Measurement Processing Unit. | |
| | | Camera Calibration | By setting the camera calibration, the measurement result can be converted and output as actual dimensions. | P15 |
| | # | Data Save | The set data can be saved in the controller main unit or as scene data. The data is held even after the FH/FZ power is turned off. | |

| Group | Icon | | Processing Item | Corresponding Page in the Catalog |
|-----------------------------------|------------|------------------------------|--------------------------------------------------------------------------------------------------------------------|-----------------------------------------|
| | chich. | Conditional Branch | Used where more than two kinds of products on the production line need to detected separately. | |
| | कै | End | This Procltem must be set up as the last processing unit of a branch. | |
| | 1 2 | DI Branch | Same as ProcItem "Branch". But you can change the targets of conditional branching via external inputs. | |
| Branching | 2 | Control Flow Normal | Set the measurement flow processing into the wait state in which the specific no-protocol command can be executed. | |
| processing | 35 | Control Flow PLC Link | Set the measurement flow processing into the wait state in which the specific PLC Link command can be executed. | |
| | 200 | Control Flow Parallel | Set the measurement flow processing into the wait state in which the specific parallel command can be executed. | |
| | \$ t | Control Flow Fieldbus | Set the measurement flow processing into the wait state in which the specific Fieldbus command can be executed. | |
| | SHITCH | Selective Branch | Easily branch to multiple destinations. | |
| Outputting results | Ш | Data Output | Used when you need to output data to the external devices such as PLC or PC via serial ports. | |
| | | Parallel Data Output | Used when you need to output data to the external devices such as PLC or PC via parallel ports. | |
| | | Parallel Judgement Output | Used when you need to output judgement results to the external devices such as PLC or PC via parallel ports. | |
| | | Fieldbus Data Output | Outputs data to an external device, such as a Programmable Controller, through a fieldbus interface. | |
| Displaying results on the monitor | 660 | Result Display | Used for displaying the texts or the figures in the camera image. | |
| | | Display Image File | Display selected image file. | |
| | | Display Last NG Image | Display the last NG images. | |

Meaning of Optical Chart

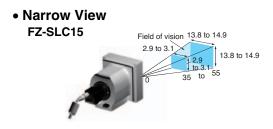

The X axis of the optical chart shows the field of vision (mm) (*1), and the Y axis of the optical chart shows the camera installation distance (mm) (*2).

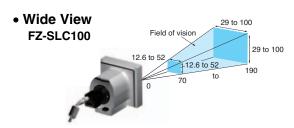

Х

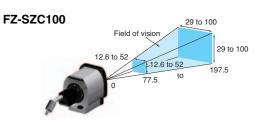

- *1. The lengths of the fields of vision given in the optical charts are the lengths of the Y axis.
- *2. The vertical axis represents WD for small cameras.

Intelligent CCD Cameras, Autofocus CCD Cameras

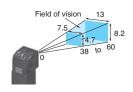

Field of vision 13.8 to 14.9
2.9 to 3.1
13.8 to 14.9
147.5 to 67.5

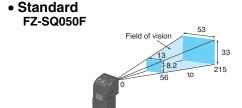

Field of Vision of Intelligent Cameras and Autofocus Cameras
The images displayed on the monitor will be rectangular images of 640×480 pixels.
The valid processing area for measurements is the 480×480-pixel area in the middle.
The above figures show the dimensions of the middle 480×480 pixels.

Terms and Conditions Agreement

Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.

- (a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.
- (b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See http://www.omron.com/global/ or contact your Omron representative for published information.

Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions.

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.
