HEF4017B

5-stage Johnson decade counter Rev. 8 — 18 November 2011

Product data sheet

General description 1.

The HEF4017B is a 5-stage Johnson decade counter with ten spike-free decoded active HIGH outputs (Q0 to Q9), an active LOW carry output from the most significant flip-flop (Q5-9), active HIGH and active LOW clock inputs (CP0, CP1) and an overriding asynchronous master reset input (MR).

The counter is advanced by either a LOW-to-HIGH transition at CP0 while CP1 is LOW or a HIGH-to-LOW transition at $\overline{CP1}$ while CP0 is HIGH (see Table 3).

When cascading counters, the Q5-9 output, which is LOW while the counter is in states 5, 6, 7, 8, and 9, can be used to drive the CP0 input of the next counter. A HIGH on MR resets the counter to zero (Q0 = \overline{Q} 5-9 = HIGH; Q1 to Q9 = LOW) independent of the clock inputs (CP0, CP1).

Automatic counter code correction is provided by an internal circuit: following any illegal code the counter returns to a proper counting mode within 11 clock pulses.

Schmitt trigger action makes the clock inputs highly tolerant of slower rise and fall times.

It operates over a recommended V_{DD} power supply range of 3 V to 15 V referenced to V_{SS} (usually ground). Unused inputs must be connected to V_{DD}, V_{SS}, or another input.

2. Features and benefits

- Automatic counter correction
- Tolerant of slow clock rise and fall times
- Fully static operation
- 5 V, 10 V, and 15 V parametric ratings
- Standardized symmetrical output characteristics
- Specified from –40 °C to +125 °C
- Complies with JEDEC standard JESD 13-B

Ordering information 3.

Table 1. **Ordering information**

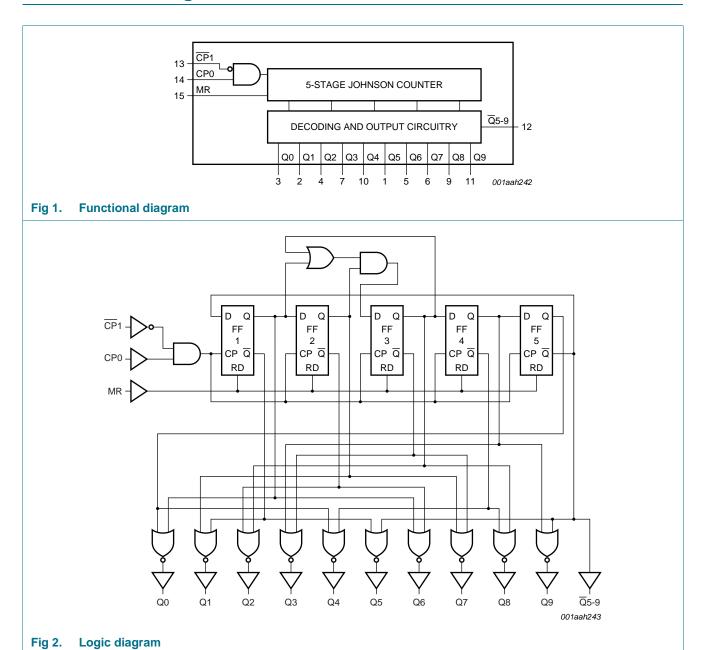

All types operate from -40 °C to +125 °C

Type number	Package	Package								
	Name	Description	Version							
HEF4017BP	DIP16	plastic dual in-line package; 16 leads (300 mil)	SOT38-4							
HEF4017BT	SO16	plastic small outline package; 16 leads; body width 3.9 mm	SOT109-1

5. Pinning information

5.1 Pinning

5.2 Pin description

Table 2. Pin description

Symbol	Pin	Description
Q0 to Q9	3, 2, 4, 7, 10, 1, 5, 6, 9, 11	decoded output
V _{SS}	8	ground supply voltage
Q 5-9	12	carry output (active LOW)
CP1	13	clock input (HIGH-to-LOW edge-triggered)

5-stage Johnson decade counter

 Table 2.
 Pin description ...continued

Symbol	Pin	Description
CP0	14	clock input (LOW-to-HIGH edge-triggered)
MR	15	master reset input
V_{DD}	16	supply voltage

6. Functional description

Table 3. Function table [1]

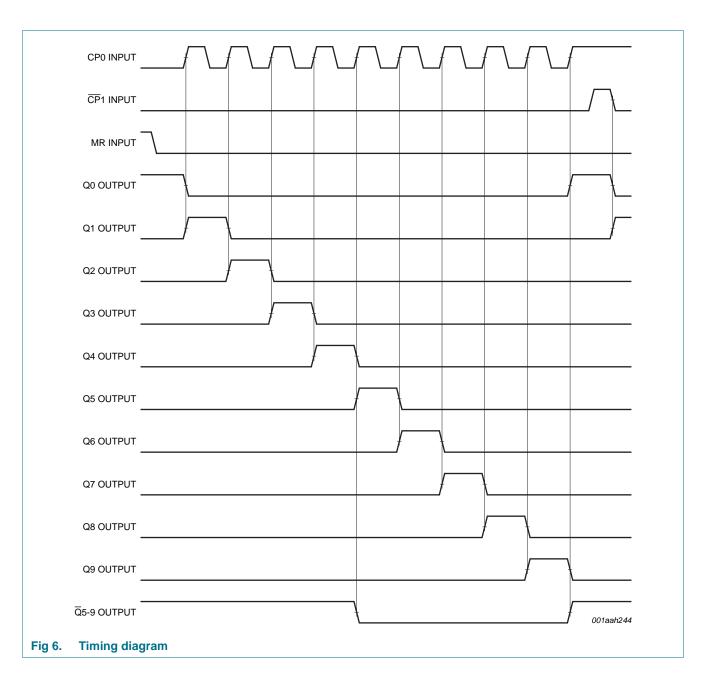

MR	CP0	CP1	Operation
Н	X	X	$Q0 = \overline{Q}5-9 = H$; Q1 to Q9 = L
L	Н	\	counter advances
L	↑	L	counter advances
L	L	X	no change
L	X	Н	no change
L	Н	↑	no change
L	\	L	no change

^[1] H = HIGH voltage level; L = LOW voltage level; X = don't care;

 $[\]uparrow$ = positive-going transition; \downarrow = negative-going transition.

			15 V			15	30	-	MHz

^[1] The typical values of the propagation delay and transition times are calculated from the extrapolation formulas shown (C_L in pF).

^[2] t_t is the same as t_{THL} and t_{TLH} .

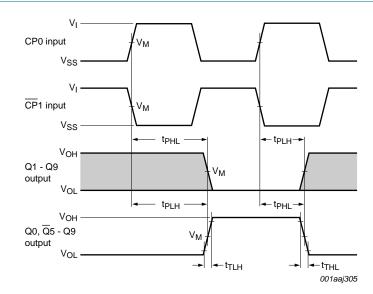

5-stage Johnson decade counter

Table 8. Dynamic power dissipation P_D

 P_D can be calculated from the formulas shown. $V_{SS} = 0 \ V$; $t_r = t_f \le 20 \ ns$; $T_{amb} = 25 \ ^{\circ}C$.

Symbol	Parameter	V_{DD}	Typical formula for P _D (μW)	where:
P_D	dynamic power	5 V	$P_D = 500 \times f_i + \Sigma (f_o \times C_L) \times V_{DD}^2$	f _i = input frequency in MHz;
	dissipation		$P_D = 2200 \times f_i + \Sigma (f_o \times C_L) \times V_{DD}^2$	f _o = output frequency in MHz;
		15 V	$P_D = 6000 \times f_i + \Sigma (f_o \times C_L) \times V_{DD}^2$	C_L = output load capacitance in pF;
				V _{DD} = supply voltage in V;
				$\Sigma(C_L \times f_0)$ = sum of the outputs.

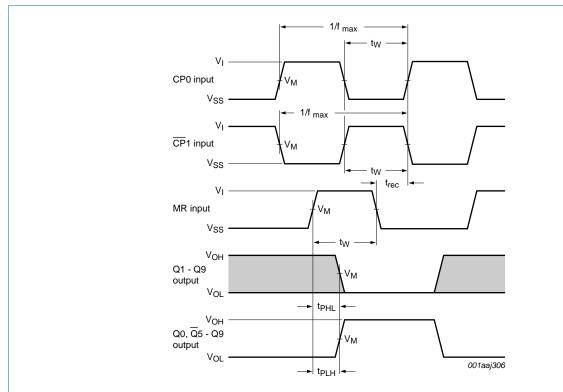

11. Waveforms

Conditions: $\overline{CP}1$ = LOW, while CP0 triggers on a LOW-to-HIGH transition. $\overline{CP}1$ triggers on a HIGH-to-LOW transition; The shaded areas indicate where the output state is set by the input count. Measurement points given in Table 9.

Fig 7. Waveforms showing the propagation delays for CP0, $\overline{\text{CP}}1$ to Qn, $\overline{\text{Q}}5$ -9 outputs and the output transition times

5-stage Johnson decade counter

 $\overline{\text{CP}}$ 1 = LOW, while CP0 triggers on a LOW-to-HIGH transition, t_{W} and t_{rec} are measured when CP0 = HIGH and $\overline{\text{CP}}$ 1 triggers on a HIGH-to-LOW transition.

The shaded areas indicate where the output state is set by the input count.

Measurement points given in Table 9.

Fig 8. Waveforms showing the minimum pulse width for CP0, CP1 and MR input; the maximum frequency for CP0 and CP1 input; the recovery time for MR and the MR input to Qn and Q5-9 output propagation delays

Hold times are shown as positive values, but may be specified as negative values;

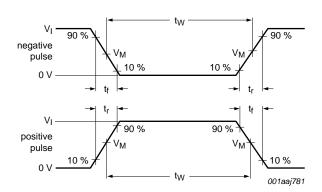

Measurement points given in Table 9.

Fig 9. Waveforms showing hold times for CP0 to CP1 and CP1 to CP0

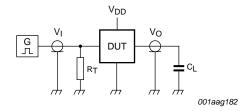

Table 9. Measurement points

Supply voltage	Input	Output
V_{DD}	V _M	V _M
5 V to 15 V	0.5V _{DD}	0.5V _{DD}

5-stage Johnson decade counter

a. Input waveforms

b. Test circuit

Test data is given in Table 10.

Definitions for test circuit:

DUT = Device Under Test;

C_L = load capacitance including jig and probe capacitance;

 R_T = termination resistance should be equal to the output impedance Z_0 of the pulse generator.

Fig 10. Test circuit for measuring switching times

Table 10. Test data

Supply voltage	Input	Input				
V_{DD}	V _I	t _r , t _f	CL			
5 V to 15 V	V _{SS} or V _{DD}	≤ 20 ns	50 pF			

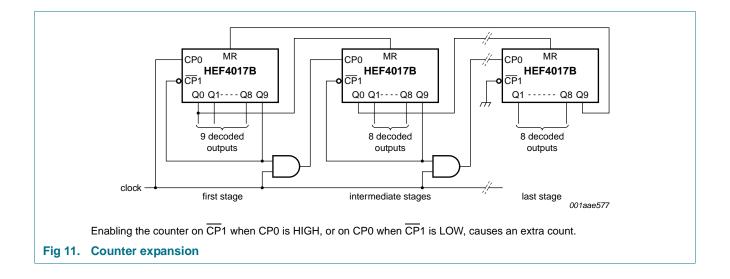

12. Application information

Some examples of applications for the HEF4017B are:

- · Decade counter with decimal decoding
- 1 out of n decoding counter (when cascaded)
- Sequential controller
- Timer

<u>Figure 11</u> shows a technique for extending the number of decoded output states for the HEF4017B. Decoded outputs are sequential within each stage and from stage to stage, with no dead time (except propagation delay).

15. Legal information

15.1 Data sheet status

Document status[1][2]	Product status[3]	Definition
Objective [short] data sheet	Development	This document contains data from the objective specification for product development.
Preliminary [short] data sheet	Qualification	This document contains data from the preliminary specification.
Product [short] data sheet	Production	This document contains the product specification.

- [1] Please consult the most recently issued document before initiating or completing a design.
- [2] The term 'short data sheet' is explained in section "Definitions"
- [3] The product status of device(s) described in this document may have changed since this document was published and may differ in case of multiple devices. The latest product status information is available on the Internet at URL http://www.nxp.com.

15.2 Definitions

Draft — The document is a draft version only. The content is still under internal review and subject to formal approval, which may result in modifications or additions. NXP Semiconductors does not give any representations or warranties as to the accuracy or completeness of information included herein and shall have no liability for the consequences of use of such information.

Short data sheet — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local NXP Semiconductors sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

Product specification — The information and data provided in a Product data sheet shall define the specification of the product as agreed between NXP Semiconductors and its customer, unless NXP Semiconductors and customer have explicitly agreed otherwise in writing. In no event however, shall an agreement be valid in which the NXP Semiconductors product is deemed to offer functions and qualities beyond those described in the Product data sheet.

15.3 Disclaimers

Limited warranty and liability — Information in this document is believed to be accurate and reliable. However, NXP Semiconductors does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information.

In no event shall NXP Semiconductors be liable for any indirect, incidental, punitive, special or consequential damages (including - without limitation - lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort (including negligence), warranty, breach of contract or any other legal theory.

Notwithstanding any damages that customer might incur for any reason whatsoever, NXP Semiconductors' aggregate and cumulative liability towards customer for the products described herein shall be limited in accordance with the *Terms and conditions of commercial sale* of NXP Semiconductors.

Right to make changes — NXP Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

Suitability for use — NXP Semiconductors products are not designed, authorized or warranted to be suitable for use in life support, life-critical or safety-critical systems or equipment, nor in applications where failure or

malfunction of an NXP Semiconductors product can reasonably be expected to result in personal injury, death or severe property or environmental damage. NXP Semiconductors accepts no liability for inclusion and/or use of NXP Semiconductors products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

Applications — Applications that are described herein for any of these products are for illustrative purposes only. NXP Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Customers are responsible for the design and operation of their applications and products using NXP Semiconductors products, and NXP Semiconductors accepts no liability for any assistance with applications or customer product design. It is customer's sole responsibility to determine whether the NXP Semiconductors product is suitable and fit for the customer's applications and products planned, as well as for the planned application and use of customer's third party customer(s). Customers should provide appropriate design and operating safeguards to minimize the risks associated with their applications and products.

NXP Semiconductors does not accept any liability related to any default, damage, costs or problem which is based on any weakness or default in the customer's applications or products, or the application or use by customer's third party customer(s). Customer is responsible for doing all necessary testing for the customer's applications and products using NXP Semiconductors products in order to avoid a default of the applications and the products or of the application or use by customer's third party customer(s). NXP does not accept any liability in this respect.

Limiting values — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) will cause permanent damage to the device. Limiting values are stress ratings only and (proper) operation of the device at these or any other conditions above those given in the Recommended operating conditions section (if present) or the Characteristics sections of this document is not warranted. Constant or repeated exposure to limiting values will permanently and irreversibly affect the quality and reliability of the device.

Terms and conditions of commercial sale — NXP Semiconductors products are sold subject to the general terms and conditions of commercial sale, as published at http://www.nxp.com/profile/terms, unless otherwise agreed in a valid written individual agreement. In case an individual agreement is concluded only the terms and conditions of the respective agreement shall apply. NXP Semiconductors hereby expressly objects to applying the customer's general terms and conditions with regard to the purchase of NXP Semiconductors products by customer.

No offer to sell or license — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.

Export control — This document as well as the item(s) described herein may be subject to export control regulations. Export might require a prior authorization from competent authorities.

5-stage Johnson decade counter

Non-automotive qualified products — Unless this data sheet expressly states that this specific NXP Semiconductors product is automotive qualified, the product is not suitable for automotive use. It is neither qualified nor tested in accordance with automotive testing or application requirements. NXP Semiconductors accepts no liability for inclusion and/or use of non-automotive qualified products in automotive equipment or applications.

In the event that customer uses the product for design-in and use in automotive applications to automotive specifications and standards, customer (a) shall use the product without NXP Semiconductors' warranty of the product for such automotive applications, use and specifications, and (b) whenever customer uses the product for automotive applications beyond

NXP Semiconductors' specifications such use shall be solely at customer's own risk, and (c) customer fully indemnifies NXP Semiconductors for any liability, damages or failed product claims resulting from customer design and use of the product for automotive applications beyond NXP Semiconductors' standard warranty and NXP Semiconductors' product specifications.
