

**MAXIM****+5V, +10V Precision  
Voltage References****General Description**

The REF01/REF02 are industry-standard precision voltage references. The stable 10V output of the REF01 can be adjusted over a  $\pm 6\%$  range with minimal effect on temperature stability. The 5V output REF02 can also be adjusted over a  $\pm 6\%$  range. The 10V REF01 has a single-supply operation over an input voltage range of 13V to 33V, while the 5V REF02 has a single-supply operation over an input voltage range of 7V to 33V. Both devices offer a low-current drain of 1mA. The REF02 also provides a TEMP pin whose output voltage varies linearly with temperature, making this device suitable for a wide variety of temperature-sensing and control applications. For new designs, refer to the MAX6035 or MAX6143 data sheets.

### Output Adjustment

The REF01 trim terminal can be used to adjust the voltage over a  $10V \pm 600mV$  range. This feature allows the system designer to trim system errors by setting the reference to a voltage other than 10V, including 10.240V for

binary applications (see the *Typical Operating Circuit*).

Adjustment of the output does not significantly affect the temperature performance of the device. The temperature coefficient change is approximately  $0.7ppm/\text{ }^\circ C$  for 100mV of output adjustment.

**Note 5:** Guaranteed by design.

**Note 9:**  $TCV_O$  is defined as  $\Delta V_{OT}$  divided by the temperature range. Guaranteed by design.

### Output Adjustment

The REF02 trim terminal can be used to adjust the output voltage over a 5V  $\pm 300mV$  range. This feature allows the system designer to trim system errors by setting the reference to a voltage other than 5V (refer to the *Typical Operating Circuit*).

Adjustment of the output does not significantly affect the temperature performance of the device. Typically, the temperature coefficient change is 0.7ppm/ $^\circ C$  for 100mV of output adjustment.

### Temperature Voltage Output

The REF02 provides a temperature-dependent output voltage on the TEMP pin. This voltage is proportional to the absolute temperature, and has a scale factor of approximately 2.1mV/ $^\circ C$  (Figure 1).

$$\text{Output Voltage} = 2.1(T + 273)mV$$

where  $T$  = Temperature in  $^\circ C$ .
