## 1 Features and Benefits

- Programmable parameters in application:
- Wide magnetic Latch range: $\pm 0.4 \mathrm{mT}$ to $\pm 80 \mathrm{mT}$
- Wide magnetic Switch range: $\pm 1.5 \mathrm{mT}$ to $\pm 66 \mathrm{mT}$
- Programmable Hysteresis: 1 mT to 36 mT
- Programmable Active Pole: North or South
- Programmable Output Behaviour: Direct or Inverted
- Built-in Negative TC coefficient: 0 to -2000 ppm/ ${ }^{\circ} \mathrm{C}$
- Increased Traceability: 32 bits ID on chip
- Wide operating voltage range: from 2.7 V to 24 V
- Reverse Supply Voltage Protection
- Output Current Limit with Auto-Shutoff
- Under-Voltage Lockout Protection
- Thermal Protection
- Lateral Sensitivity and dual die option

## 2 Application Examples

- Automotive, Consumer and Industrial
- Solid-state switch
- 3-phase BLDC motor commutation
- Wiper motor
- Window lifter
- Sunroof/Tailgate opener
- Seat motor adjuster
- Electrical power steering
- Brake Light switch

## 3 Ordering Information

| Product Code | Temperature Code | Package Code | Comment |
| :---: | :---: | :---: | :---: |

Datasheet

## 4 Functional Diagram

## 5 General Description

The Melexis MLX92232 is the second generation programmable Hall-effect sensor designed in mixed signal CMOS technology. The device integrates a voltage regulator, Hall sensor with advanced offset cancellation system and an open-drain output driver, all in a single package.

With the built-in reverse voltage protection, a serial resistor or diode on the supply line is not required so that even remote sensors can be specified for low voltage operation down to 2.7 V while being reverse voltage tolerant. In the event of a drop below the minimum supply voltage during operation, the under-voltage lock-out protection will automatically freeze the device, preventing the electrical perturbation to affect the magnetic measurement circuitry.

The open drain output is fully protected against short-circuit with a built-in current limit. An additional automatic output shut-off is activated in case of a prolonged short-circuit condition. A self-check is then periodically performed to switch back to normal operation if the short-circuit condition is released.

The on-chip thermal protection also switches off the output if the junction temperature increases above an abnormally high threshold. It will automatically recover once the temperature decreases below a safe value.

Furthermore the MLX92232 features a full set of programmable parameters that can be adjusted in the application in order to achieve the highest possible system accuracy by compensating the mechanical tolerances.

An Integrated Magnetic Concentrator option (IMC) has been added to sense the lateral field component. This is adding more flexibility in the module design. A dual die option is also available for applications that need a secondary output; these can be programmed independently from each other.

## 11 Application Information

### 11.1 Typical Three-Wire Application Circuit

11.1.1 92232LSE-AAA-xxx, 92232LUA-AAA-xxx

## Notes:

1. For proper operation, a 10 nF to 100 nF bypass capacitor should be placed as close as possible to the $V_{D D}$ and ground pin.
2. The pull-up resistor $R_{\text {Pu }}$ value should be chosen in to limit the current through the output pin below the maximum allowed continuous current for the device.
3. A capacitor connected to the output is not needed, because the output slope is generated internally.
11.1.2 92232LVA-AAA-xxx

Notes:

1. For proper operation, a 10 nF to 100 nF bypass capacitor should be placed as close as possible to the $V_{D D}$ and ground pin.
2. The pull-up resistors $R_{\text {pu }}$ values should be chosen in to limit the current through the output pin below the maximum allowed continuous current for the device.
3. A capacitors connected to the outputs are not needed, because the output slope is generated internally.

### 11.2 Automotive and Harsh, Noisy Environments Three-Wire Circuit

11.2.1 92232LSE-AAA-xxx, 92232LUA-AAA-xxx

Notes:

1. For proper operation, a 10 nF to 100 nF bypass capacitor should be placed as close as possible to the $\mathrm{V}_{\mathrm{DD}}$ and ground pin.
2. The device could tolerate negative voltage down to -24 V , so if negative transients over supply line $\mathrm{V}_{\text {PEAK }}<-30 \mathrm{~V}$ are expected, usage of the diode D1 is recommended. Otherwise only R1 is sufficient.
When selecting the resistor R1, three points are important:

- the resistor has to limit $I_{D D} / I_{\text {DDREV }}$ to 50 mA maximum
- the resistor has to withstand the power dissipated in both over voltage conditions ( $\mathrm{V}_{\mathrm{R} 1}{ }^{2} / \mathrm{R} 1$ )
- the resulting device supply voltage $\mathrm{V}_{\mathrm{DD}}$ has to be higher than $\mathrm{V}_{D D} \min \left(\mathrm{~V}_{D D}=\mathrm{V}_{C C}-\mathrm{R} 1 . \mathrm{I}_{\mathrm{DD}}\right)$

3. The device could tolerate positive supply voltage up to +27 V (until the maximum power dissipation is not exceeded), so if positive transients over supply line with $\mathrm{V}_{\text {PEAK }}>32 \mathrm{~V}$ are expected, usage a zener diode $\mathrm{Z1}$ is recommended. The R1-Z1 network should be sized to limit the voltage over the device below the maximum allowed.

### 11.2.2 92232LVA-AAA-xxx

Notes:

1. For proper operation, a 10 nF to 100 nF bypass capacitor should be placed as close as possible to the $V_{D D}$ and ground pin.
2. The device could tolerate negative voltage down to -24 V , so if negative transients over supply line $\mathrm{V}_{\text {PEAK }}<-30 \mathrm{~V}$ are expected, usage of the diode D1 is recommended. Otherwise only R1 is sufficient.
When selecting the resistor R1, three points are important:

- the resistor has to limit $I_{D D} / I_{\text {DDREV }}$ to 50 mA maximum
- the resistor has to withstand the power dissipated in both over voltage conditions ( $\mathrm{V}_{\mathrm{R} 1}{ }^{2} / \mathrm{R} 1$ )
- the resulting device supply voltage $\mathrm{V}_{\mathrm{DD}}$ has to be higher than $\mathrm{V}_{\mathrm{DD}} \min \left(\mathrm{V}_{\mathrm{DD}}=\mathrm{V}_{C C}-\mathrm{R1} . \mathrm{I}_{\mathrm{DD}}\right)$

3. The device could tolerate positive supply voltage up to +27 V (until the maximum power dissipation is not exceeded), so if positive transients over supply line with $\mathrm{V}_{\text {PEAK }}>32 \mathrm{~V}$ are expected, usage a zener diode Z 1 is recommended. The R1-Z1 network should be sized to limit the voltage over the device below the maximum allowed.

## 12 Standard information regarding manufacturability of Melexis products with different soldering processes

Our products are classified and qualified regarding soldering technology, solderability and moisture sensitivity level according to following test methods:

Reflow Soldering SMD's (SUurface Mount Devices)

- IPC/JEDEC J-STD-020

Moisture/Reflow Sensitivity Classification for Nonhermetic Solid State Surface Mount Devices (classification reflow profiles according to table 5-2)

- EIA/JEDEC JESD22-A113

Preconditioning of Nonhermetic Surface Mount Devices Prior to Reliability Testing
(reflow profiles according to table 2)

## Wave Soldering SMD's (́ㅗurface Mount Devices) and THD's (Through Hole Devices)

- EN60749-20

Resistance of plastic- encapsulated SMD's to combined effect of moisture and soldering heat

- EIA/JEDEC JESD22-B106 and EN60749-15

Resistance to soldering temperature for through-hole mounted devices

Iron Soldering THD's (Through Hole Devices)

- EN60749-15

Resistance to soldering temperature for through-hole mounted devices

## Solderability SMD's (SUurface Mount Devices) and THD's (Through Hole Devices)

- EIA/JEDEC JESD22-B102 and EN60749-21

Solderability
For all soldering technologies deviating from above mentioned standard conditions (regarding peak temperature, temperature gradient, temperature profile etc) additional classification and qualification tests have to be agreed upon with Melexis.

The application of Wave Soldering for SMD's is allowed only after consulting Melexis regarding assurance of adhesive strength between device and board.

Melexis is contributing to global environmental conservation by promoting lead free solutions. For more information on qualifications of RoHS compliant products (RoHS = European directive on the Restriction Of the use of certain Hazardous Substances) please visit the quality page on our website: http://www.melexis.com/quality.aspx

## 13 ESD Precautions

Electronic semiconductor products are sensitive to Electro Static Discharge (ESD).
Always observe Electro Static Discharge control procedures whenever handling semiconductor products.

Notes:

1. Dimension " $D$ " and "E1" do not include mold flash or protrusions. Mold flash or protrusion shall not exceed 0.15 mm on " $D$ " and 0.25 mm on " $E$ " per side.
2. Dimension "b" does not include dambar protrusion.

| SE Pin № | Name | Type | Function |
| :--- | :--- | :--- | :--- |
| 1 | VDD | Supply | Supply Voltage pin |
| 2 | OUT | Output | Open Drain output |
| 3 | GND | Ground | Ground pin |

Datasheet

### 14.2 UA (TO92-3L) Package Information

Notes:

1. All dimensions are in millimeters
2. Package dimension exclusive molding flash.
3. The end flash shall not exceed 0.127 mm on the top side.

Marking:
$1^{\text {st }}$ Line : 31WW $\rightarrow$ WW - calendar week
$2^{\text {nd }}$ Line : YLLL: $\rightarrow \quad \mathrm{Y}$ - last digit of year LLL- Lot nr (3 digits)

Hall plate location

## Notes:

1. All dimensions are in millimeters

## 16 Disclaimer

The information furnished by Melexis herein ("Information") is believed to be correct and accurate. Melexis disclaims (i) any and all liability in connection with or arising out of the furnishing, performance or use of the technical data or use of the product(s) as described herein ("Product") (ii) any and all liability, including without limitation, special, consequential or incidental damages, and (iii) any and all warranties, express, statutory, implied, or by description, including warranties of fitness for particular purpose, non-infringement and merchantability. No obligation or liability shall arise or flow out of Melexis' rendering of technical or other services.
The Information is provided "as is" and Melexis reserves the right to change the Information at any time and without notice. Therefore, before placing orders and/or prior to designing the Product into a system, users or any third party should obtain the latest version of the relevant information to verify that the information being relied upon is current.
Users or any third party must further determine the suitability of the Product for its application, including the level of re liability required and determine whether it is fit for a particular purpose.
The Information is proprietary and/or confidential information of Melexis and the use thereof or anything described by the Information does not grant, explicitly or implicitly, to any party any patent rights, licenses, or any other intellectual property rights.
This document as well as the Product(s) may be subject to export control regulations. Please be aware that export might require a prior authorization from competent authorities.
The Product(s) are intended for use in normal commercial applications. Unless otherwise agreed upon in writing, the Product(s) are not designed, authorized or warranted to be suitable in applications requiring extended temperature range and/or unusual environmental requirements. High reliability applications, such as medical life-support or life-sustaining equipment are specifically not recommended by Melexis.
The Product(s) may not be used for the following applications subject to export control regulations: the development, production, processing, operation, maintenance, storage, recognition or proliferation of 1) chemical, biological or nuclear weapons, or for the development, production, maintenance or storage of missiles for such weapons: 2) civil firearms, including spare parts or ammunition for such arms; 3) defense related products, or other material for military use or for law enforcement; 4) any applications that, alone or in combination with other goods, substances or organisms could cause serious harm to persons or goods and that can be used as a means of violence in an armed conflict or any similar violent situation.
The Products sold by Melexis are subject to the terms and conditions as specified in the Terms of Sale, which can be found at https://www.melexis.com/en/legal/terms-andconditions.

This document supersedes and replaces all prior information regarding the Product(s) and/or previous versions of this document.

[^0]:    1 Typical values are defined at $T_{A}=+25^{\circ} \mathrm{C}$ and $V_{D D}=12 \mathrm{~V}$
    2 Valid for 92232LSE-AAA-xxx and 92232LUA-AAA-xxx versions
    Valid for 92232LVA-AAA-xxx version
    4 Guaranteed by design and verified by characterization, not production tested
    The Power-On Time represents the time from reaching $V_{D D}=2.7 \mathrm{~V}$ to the first refresh of the output
    Power-On Slew Rate is not critical for the proper device start-up.
    Maximum switching frequency corresponds to the maximum frequency of the applied magnetic field which is detected without loss of pulses
    $R_{P U}$ and $V_{P U}$ are respectively the external pull-up resistor and pull-up power supply
    Activated output with 1 mT overdrive
    10 If the Output is in Current Limitation longer than $t_{\text {clon }}$ the Output is switched off in high-impedance state. The Output returns back in active state at next reaching of $B_{\text {op }}$ or after $t_{\text {CLOFF }}$ time interval
    $1 T_{\text {PROT }}$ and $T_{\text {REL }}$ are the corresponding junction temperature values

[^1]:    1 The typical values are defined at $\mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$ and $\mathrm{V}_{\mathrm{DD}}=12 \mathrm{~V}$.
    2 For Latch sensor $B_{L T H}=\left(B_{O P}-B_{R P}\right) / 2$. The Latch programming step is typically between $0.7 \%$ and $1.5 \%$ of the programmed $B_{\text {LTH }}$ value for $\left|B_{\text {LTH }}\right| \geq 1.2 m T$ and $0.018 m T$ for $\left|B_{\text {LTH }}\right| \leq 1.2 m T$
    3 Guaranteed by design and verified by characterization. The programming ranges for BLTH and BOP include some margin for process deviations,
    4 For Switch sensor the $B_{\text {op }}$ programming step is typically between $0.7 \%$ and $1.5 \%$ of the programmed $B_{\text {op }}$ value for $\left|B_{\text {op }}\right| \geq 4.8 \mathrm{mT}$ and 0.072 mT for $\left|B_{\text {op }}\right| \leq 4.8 \mathrm{mT}$
    5 For Switch sensor with proportional hysteresis $\mathrm{HYS}_{\text {RATIO }}=\mathrm{B}_{\text {HYS }} / \mathrm{B}_{\text {OP }}$. The $\mathrm{HYS}_{\text {RATIO }}$ programming step is 0.05 .
    6 The given $\min / \mathrm{max}$ limits are typical values.
    7 For Switch sensor with fixed hysteresis value
    8 Guaranteed by design and verified by characterization.
    9 For Latch sensor offset is defined as $B_{\text {OFFSET }}=\left(B_{O P}+B_{R P}\right) / 2$.
    10 The temperature Coefficient is calculated using following formula:
    $T C=\frac{\left(\mathrm{B}_{\mathrm{OPT} 2}-\mathrm{B}_{\mathrm{RPT} 2}\right)-\left(\mathrm{B}_{\mathrm{OPT} 1}-\mathrm{B}_{\mathrm{RPT} 1}\right)}{\left(\mathrm{B}_{\mathrm{OPT} 1}-\mathrm{B}_{\mathrm{RPT} 1}\right) *\left(\mathrm{~T}_{2}-\mathrm{T}_{1}\right)} * 10^{6}, \mathrm{ppm} / \mathrm{C} ; \mathrm{T}_{1}=-40^{\circ} \mathrm{C} ; \mathrm{T}_{2}=150^{\circ} \mathrm{C}$
    11 Valid for 92232LSE-AAA-0xx, 92232LUA-AAA-0xx, 92232LVA-AAA-Oxx versions
    12 Valid for 92232LUA-AAA-2xx
