Integrated Circuit
Positive Voltage Regulator, 100mA
Low Dropout Voltage**

Description:

The NTE7234 series consists of positive fixed (NTE7234-1, NTE7234-2) and adjustable (NTE7234-3) output voltage regulators that are specifically designed to maintain proper regulation with an extreme low input-to-output voltage differential. These devices are capable of supplying output currents in excess of 100mA and feature a low bias current of 0.4mA at 10mA output.

The NTE7234 series also includes internal current limiting, thermal shutdown, and additionally, is able to withstand temporary power-up with mirror-image insertion.

Due to the low dropout voltage and bias current specifications, the NTE7234 series is ideally suited for battery powered industrial and consumer equipment where an extension of useful battery life is desirable.

Note 1. Maximum ratings are those values beyond which device damage can occur. Maximum ratings applied to the device are individual stress limit values (not normal operating conditions) and are not valid simultaneously. If these limits are exceeded, device functional operation is not implied, damage may occur and reliability may be affected.
