## Features

- RoHS lead-solder-exemption compliant
- Wide-range input for 110/220 VAC applications
- CE marked to Low Voltage Directive
- Input transient \& ESD compliance to EN61000-4-2/-3/-4
- Meets EN55022, Class B limits
- TTL compatible Power Fail Signal
- Greater than 175,000 Hours MTBF
- Metric and SAE mounting inserts

## Description

Power-One's MAP80 Series of power supplies provides reliable, tightly-regulated DC power for commercial and industrial systems which require high peak current capabilities. Wide-range AC input and full international safety, EMI, and ESD compliance ensure worldwide acceptance. All units bear the CE Mark.
The MAP80 utilizes a variable frequency design with a thermally efficient U-channel chassis to provide full power operation in convection-cooled applications. Design innovations include metric and SAE mounting inserts on each mounting surface to provide integration flexibility. Dual-mode connectors provide traditional terminal block connections or popular single-row Molex connector mating.
Single-output models feature wide-range output adjustability to meet a wide variety of standard and user-specific output voltage requirements.
