XPDV3120

PRODUCT FEATURES

- 70 GHz bandwidth with flat response
- Excellent pulse behavior
- Unsurpassed high-power handling capability
- High responsivity
- Unique on-chip integrated bias network
- Well matched to 50 Ω

APPLICATIONS

- Communication systems at 100 Gb/s (OC-768) and beyond
- Microwave photonics up to 60 GHz
- High speed lightwave characterization
- Test & Measurement equipment

The XPDV3120R comprises an optimized 75 GHz waveguide-integrated photodiode, which shows an extremely flat frequency response, both in power and in phase. Finisar's on-chip integrated bias network with an optimized RF-design in particular ensures an undisturbed frequency response from DC to the 3 dB cut-off frequency and saves costs for external bias-tees. The module is especially designed for optimal RF-performance; therefore, the pulse response reveals virtually no ringing. It is best suited for Test & Measurement or Microwave photonics applications up to 60 GHz.

A further advantage of the waveguide structure is the unbeatable high power behavior. The photodetector shows a linear response up to an optical input power of 13 dBm. An output voltage swing of more than 0.5 Vpp can be achieved for short pulses, without any degradation of the pulse response.

Notice

Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operations section for extended periods of time may affect reliability.

The inherent design of this component causes it to be sensitive to electrostatic discharge (ESD). To prevent ESD-induced damage and/or degradation to equipment, take normal ESD precautions when handling this product.
