

Inductors for power circuits Multilayer ferrite **MLP** series

# MLP2520 type

# **FEATURES**

- A low-loss magnetic material is used so that a low-loss inductor for the power supply circuit can be achieved.
- On addition to the inductance value, product types with various features are available so that they can be compatible with different

W type: products with low DC resistance and large current.

H type: this product uses a low-loss material and has low DC resistance.

\* Optimal for when heavy load power efficiency is important.

V type: as with the H type, this product with a low-loss magnetic material and that has good DC superimposition type characteristics.

- \* Optimal for when light load power efficiency is important.
- S type: STD product lineup that includes a wide L value and various sizes.
- Operating temperature range: -40 to +125°C (including self-temperature rise)

#### APPLICATION

- O Smart phones, tablet terminals, digital cameras, video cameras, HDDs, power supply modules, etc.
- O Application guides: Smart phones/tablets

#### **PART NUMBER CONSTRUCTION**

MLP	2520	W	R47	M	Т	0S1
Series name	L×W×T dimensions 2.5×2.0 mm	Characteristic type	Inductance (µH)	Height 1.0 mm max. 1.2 mm max.	Packaging style	Internal code

#### CHARACTERISTICS SPECIFICATION TABLE

# ■TEMPERATURE RANGE, INDIVIDUAL WEIGHT

Туре	Operating temperature range*	Storage temperature range**	Individual weight
t=1.0	-40 to +125 °C	-40 to +85 °C	15 mg
t=1.2	-40 to +125 °C	−40 to +85 °C	25 mg

<sup>\*</sup> Operating temperature range includes self-temperature rise.

<sup>\*\*</sup> The storage temperature range is for after the assembly.

# REMINDERS FOR USING THESE PRODUCTS

Before using these products, be sure to request the delivery specifications.

# SAFETY REMINDERS

Please pay sufficient attention to the warnings for safe designing when using this products.

<b>⚠</b> REMINDERS		
The storage period is less than 12 months. Be sure to follow the storage conditions (temperature: 5 to 40°C, humidity: 10 to less).  If the storage period elapses, the soldering of the terminal electrodes may deteriorate.	75% RH or	
Do not use or store in locations where there are conditions such as gas corrosion (salt, acid, alkali, etc.).		
Before soldering, be sure to preheat components.  The preheating temperature should be set so that the temperature difference between the solder temperature and chip to does not exceed 150°C.	emperature	
Soldering corrections after mounting should be within the range of the conditions determined in the specifications. If overheated, a short circuit, performance deterioration, or lifespan shortening may occur.		
When embedding a printed circuit board where a chip is mounted to a set, be sure that residual stress is not given to the the overall distortion of the printed circuit board and partial distortion such as at screw tightening portions.	chip due to	
Self heating (temperature increase) occurs when the power is turned ON, so the tolerance should be sufficient for the design.	set thermal	
Carefully lay out the coil for the circuit board design of the non-magnetic shield type.  A malfunction may occur due to magnetic interference.		
Use a wrist band to discharge static electricity in your body through the grounding wire.		
Do not expose the products to magnets or magnetic fields.		
Do not use for a purpose outside of the contents regulated in the delivery specifications.		
The products listed on this catalog are intended for use in general electronic equipment (AV equipment, telecommunicat ment, home appliances, amusement equipment, computer equipment, personal equipment, office equipment, measuren ment, industrial robots) under a normal operation and use condition.  The products are not designed or warranted to meet the requirements of the applications listed below, whose performance a ity require a more stringent level of safety or reliability, or whose failure, malfunction or trouble could cause serious damage	nent equip- and/or qual-
