Product FOCUS

LOCC-Box

The intelligent current monitoring system of LÜTZE
LOCC-Box Highlights

• 1- and 2-channel versions on 8.1 mm overall width

• "Activation" possible if service is required

• Up to 50 setting options in one module

• Integration into field bus systems

• Bridges instead of wiring

• Compact system construction, with different versions available

• Cost savings

LOCC-Box-FB
Version for nearly all requirements. 50 manual setting options in one module. This means design flexibility and cost savings in purchasing, in the warehouse, in switch cabinet construction or in on-site service.

LOCC-Box-Net
Builds on the LOCC-Box Standard, with communication via various field bus systems (Profinet-IO, Profibus-DP or EtherCAT). Optional current and voltage measurement, precise on/off switching, preventative maintenance and status requests are possible.

LOCC-Box-EC
Affordable version for the essential tasks of line and device protection. Status request is possible via Pin 3. The current range and tripping characteristic are determined by order code and are factory-set. The protected output is available through 3 connection terminals and saves additional distribution terminals and costs.

LOCC-Box-ED
Cost-optimized 2-channel version on 8.1 mm, including status notification for each channel. Flexible current range setting with a rotary selector in 1A steps for both channels.

LOCC-Box-C2 / C2Net
Compliant with NEC Class 2 and actively limits the output current. Thus, the output rating is limited to max. 96 W. Special power supply units in accordance with NEC Class 2 are not required.

LÜTZE
SYSTEMATIC TECHNOLOGY

Current control from Lütze:
# LOCC-Box at a glance

Space-saving

- 2-channel version on 8.1 mm overall width
- Reduces space and costs
- Narrowest component on the market
- Variable current range setting per rotary switch
- Single-channel fault indication

Patented tripping characteristic (characteristic curves)

- Covers thermal and magnetic fields
- From fast to super slow (max. quantity 5)
- Reliable tripping
- No limit switch function
Power supply in rush current reduced when switched on

- Delayed load switching
- Reduction of "stress" for the power supply unit
- Longer service life

NEC Class 2 in accordance with UL 61010

- Active current limit
- Output line limit < 96 W
- Use of standard power supply units possible
- Built with UL-compliant load circuits
- Useable in 12 V and 24 V circuits

Integration in field bus systems

- Channel-related information , process data (status, current, voltage...)
- Preventative maintenance through current measurement
- Switching level reduction
