## MOUNTING

### Normal Use

The capacitors are designed for mounting on printed-circuit boards. The capacitors packed in bandoliers are designed for mounting in printed-circuit boards by means of automatic insertion machines.

For detailed tape specifications refer to packaging information: <u>www.vishay.com/doc?28139</u>.

### Specific Method of Mounting to Withstand Vibration and Shock

In order to withstand vibration and shock tests, it must be ensured that stand-off pips are in good contact with the printed-circuit board:

- For pitches  $\leq$  15 mm capacitors shall be mechanically fixed by the leads
- For larger pitches the capacitors shall be mounted in the same way and the body clamped

### Space Requirements on Printed Circuit Board

The maximum space for length ( $I_{max}$ ), width ( $w_{max}$ ) and height ( $h_{max}$ ) of film capacitors to take in account on the printed circuit board is shown in the drawings.

- For products with pitch  $\leq$  15 mm,  $\Delta w$  =  $\Delta I$  = 0.3 mm;  $\Delta h$  = 0.1 mm
- For products with 15 mm < pitch  $\leq$  27.5 mm,  $\Delta w = \Delta I = 0.5$  mm;  $\Delta h = 0.1$  mm
- For products with pitch = 37.5 mm,  $\Delta w = \Delta I = 0.7$  mm;  $\Delta h = 0.5$  mm

Eccentricity defined as in drawing. The maximum eccentricity is smaller than or equal to the lead diameter of the product concerned.

### **SOLDERING CONDITIONS**

For general soldering conditions and wave soldering profile, we refer to the application note: "Soldering Guidelines for Film Capacitors": <u>www.vishay.com/doc?28171</u>

### Storage Temperature

 $T_{sta} = -25 \text{ °C to } +35 \text{ °C with RH maximum 75 \% without condensation}$ 

#### **Ratings and Characteristics Reference Conditions**

Unless otherwise specified, all electrical values apply to an ambient temperature of 23 °C  $\pm$  1 °C, an atmospheric pressure of 86 kPa to 106 kPa and a relative humidity of 50 %  $\pm$  2 %.

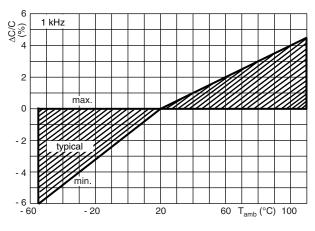

For reference testing, a conditioning period shall be applied over 96 h  $\pm$  4 h by heating the products in a circulating air oven at the rated temperature and a relative humidity not exceeding 20 %.

Insulation resistance as a function of ambient temperature (typical curve)

### **APPLICATION NOTES AND LIMITING CONDITIONS**

- For X2 electromagnetic interference suppression where a higher stability grade is needed for continuous across the line applications (50 Hz/60 Hz) with a maximum mains voltage of 310 V<sub>AC</sub>.
- These capacitors are not intended for continuous pulse application. For these situations capacitors of the AC and pulse programs must be used.
- For series impedance applications we refer to application note: <a href="http://www.vishay.com/doc?28153">www.vishay.com/doc?28153</a>
- The maximum ambient temperature must not exceed 110 °C.
- Rated voltage pulse slope:

if the pulse voltage is lower than the rated voltage, the values of the specific reference data can be multiplied by 435  $V_{DC}$  and divided by the applied voltage.
